Q. But, Doctor, if you decreased the dividend which a company pays, it is bound to affect the situation to the extent of this 16 per cent on the amount of the dividend, isn't it, necessarily? You don't have to know everything about taxes to know that, do you?

A. If that were the only factor involved in the situation, that is correct.

* * * * *

[R. p. 1590] By Mr. Tucker:

Q. If you save $100,000, Doctor, by decreasing the dividends, wouldn't that necessarily increase your taxes by $16,000?

* * * * *

[R. p. 1591] The Witness: Yes sir, if that were the only factor under consideration.

* * * * *

[R. p. 1594] The Examiner: Read the question back, Mr. Reporter.

(The record was read, as follows:)

"Was National Lead that is referred to in the second paragraph under the heading of Preferred Stocks, also

quality ratings on preferred, among the list of high grade preferred stocks in the Standard Statistics ratings that you referred to in your report?"

Mr. Tucker: On page 6.

The Witness: There is a National Lead 6 per cent preferred stock that is included in the 15 preferred stocks which go to make up that index.

By Mr. Tucker:

Q. So that Standard regards National Lead preferred as a high grade preferred, does it not?

A. Yes, sir.

Q. With respect to that, they point out, do they not in the second paragraph of Preferred Stockholders' Exhibit No. 35 that it fluctuated all the way, this high grade preferred, from 60 to 170; is that right?

A. That is correct.

Q. Do they also point out in the same paragraph that the dividend was adequately covered during that tremendous fluctuation?

A. Yes, sir.

Q. Do they say, "and in a variable security, with no maturity date, that's the only quality feature that matters, while market performance and prospects are often of highest importance?" Do they say that, Doctor?

A. They imply that dividend coverage is the principal factor to be considered as far as a rating process is concerned.

Q. But even with respect to that, they point out that although the dividend of National Lead was adequately covered it fluctuated all the way from 60 to 170, don't they, Doctor?

A. That is quite correct and I might go further to say that Eastman Kodak, which I think all investment analysts would agree has outstanding the highest grade investment stock in the United States, said stock fluctuated during the

period 1929 to 1935 from a low of 99 to a high of 200 in the year 1945, so that there unquestionably were factors involving the valuation of preferred stocks during this period, such as changes in money rates, which could very easily substantially change the values of preferred stocks. If you will refer to the index presented there in respect to high grade bond prices, you will see that the index of yields has declined from 5.28 basis in the year 1932 to a 2.67 basis in the year 1945 as indicative of the changes which have taken place in the money markets during that period.

In other words, interest rates during this period were practically halved. The difference between 5.28 and 2.67 represents a reduction of approximately 50 per cent in interest rates during this period.

We have already discussed interest rates and their possible permanency or lack of permanency in previous testimony and with the halving of interest rates it would be normal for a 100 per cent advance to occur in respect to the highest grade preferred stocks. That is what we had in the case of Eastman Kodak. We had more than a 100 per cent increase in the price of National Lead, but a very substantial portion of that increase in value is to be attributed not to any change in investment characteristics, not to a greater or less coverage, but to a vast and fundamental change which has taken place in respect to interest rates during this period.

Q. If you will refer to Eastman Kodak in your report on the valuation of preferred stock of the American Light & Traction, you threw that out of consideration on the basis that that was among preferred stocks a "sport", didn't you?

A. That is correct, and among preferred stocks I suppose it might be compared to the Lodges back in Massachusetts, where the Cabots are supposed to speak only to the Lodges and the Lodges are supposed to speak only to God; in other words, we might make an analogy with Eastman

Kodak because it is so vastly superior in respect to all types of statistical analysis to any other preferred stock in the country, and from a statistical point of view I think it was proper to exclude it.

Q. In any event this general paragraph that we have been talking about, the second paragraph under that heading Preferred Stock etc., on Preferred Stockholders' Exhibit 35, shows, doesn't it, that the reasons they stopped making investment ratings on even high grade preferred stocks is that they fluctuate so widely?

A. I think the exhibit speaks for itself.

Q. All right. That is satisfactory to me.

Now, as a matter of fact, they were talking there about what you admitted a few minutes ago they characterized as a high grade preferred and you are talking in this case, so far as Engineers preferred stock is concerned, with respect to something that you admit is a medium grade preferred. Is that true?

Mr. Condon: As of what date, Mr. Tucker?

Mr. Tucker: As of the date he speaks of in his report, whatever that is.

The Witness: I didn't refer to National Lead in my report.

By Mr. Tucker:

Q. You referred to Engineers as a medium grade preferred stock?

A. That is correct.

Q. And not a high grade preferred stock?

A. That is correct, yes, sir. I did.

Q. Did you not?

A. Yes, sir.

Q. And you say that you admitted that National Lead was regarded by Standard as being a high grade preferred?

A. Yes, sir.

Ralph E. Badger—Cross Examination (Cont'd)

Q. You don't so characterize it, do you?

A. Yes, I do.

Q. So that when you talk in your report about this medium grade preferred of Engineers as having a permanency of value so far as you can humanly predict, the Standard & Poor's wouldn't agree with your analysis on the basis of this second paragraph, would it?

A. I wouldn't admit that statement at all. I don't think it is a correct statement of fact.

Q. Well, Doctor, they say they stopped the stock rating, even high grade preferred stocks, because they fluctuated all over the map, didn't they, in effect?

A. They said they have ceased assigning investment quality ratings to preferred stocks because of the fact that their quality ratings were meaningless.

Q. And their quality ratings were meaningless because of what?

A. Apparently because they weren't of any particular use.

Q. But don't they say in that paragraph——

Mr. Condon: Mr. Examiner, I thought that Mr. Tucker said he was satisfied with this witness' statement that the exhibit spoke for itself. Now we are getting off into specific inquiry as to sentences and clauses and phrases of the exhibit.

I feel that there ought to be some limit to this type of examination. The exhibit is already in evidence.

The Examiner: I don't think he is commenting so much on this exhibit, Mr. Condon, as he is on the witness' testimony as to the permanency as he has alleged in his report of the values that he has placed there.

I think it is perfectly proper cross-examination.

By Mr. Tucker:

Q. Don't they say in that paragraph that the reason they didn't think they were of any particular use was

because they fluctuated? They refer to them as tremendous fluctuations, don't they?

A. Well, I wouldn't make that inference from reading the letter. It gets to be a question of one man's opinion as against another man's opinion as to how this letter should be interpreted and if you wish me to give my opinion as to why they were discontinued I would be glad to do so; but I don't think that that would be particularly helpful.

By Mr. Condon:

Q. Helpful to whom, Dr. Badger?

(No response.)

Q. It would be particularly helpful to whom, Dr. Badger? Mr. Tucker?

A. It wouldn't be helpful to these proceedings. I don't purport to put myself in the shoes of the people that wrote this letter. They clearly stated in the letter that they abandoned these ratings because of the fact that they were meaningless and they use the exact words "meaningless" and they state in the letter that they have substituted in lieu thereof a different type of rating which they believe to be far more significant and to have greater value to their clients.

Now as to what further reason they had in the back of their minds when they came to that decision, I am not qualified to state.

Mr. Tucker: I will call attention to the fact that the witness has proceeded to do exactly what Mr. Condon objected to my doing a few minutes ago.

Mr. Condon: My objection was overruled, Mr. Tucker, and you persisted.

Mr. Tucker: Mr. Examiner, I have had prepared a chart largely from the record in this case showing Standard & Poor's preferred stock yields and that is the same yield

chart that we have been talking about as I understand it for the period from 1918 to January 1946.

We have superimposed on that chart the yields of the Engineers 5% preferred plotted at June and December from the time this 5 per cent preferred stock was issued in about the middle of the year 1928 to January 1, 1946.

We have also superimposed on that chart the Federal Reserve index of production.

I ask that this be marked for identification.

The Examiner: Let that be marked as Applicant's Exhibit No. 76 for identification.

(The document referred to is marked as Applicant's Exhibit No. 76 for identification.)

* * * * *

[R. p. 1624]

D. C. BARNES,

previously sworn, resumed the stand and was examined and testified further as follows:

The Examiner: Mr. Barnes, you have previously been sworn in this case.

Direct Examination

* * * * *

[R. p. 1625] By Mr. Tucker:

* * * * *

Q. Are you qualified in public utility financing, do you think, Mr. Barnes?

A. Yes, I think so.

Q. How many millions of dollars of issues would you say roughly you have handled?

(Discussion off the record.)

The Examiner: Have you any question as to his qualifications, Mr. Condon?

Mr. Condon: Mr. Examiner, I would like very much to accept Mr. Kanton's statement but I have never heard Mr. Barnes testify with respect to h' qualifications.

The Examiner: Proceed, Mr. Tucker, with your examination.

Mr. Condon: I would like to say this—that I have no objection in the interest of brevity to Mr. Tucker leading the witness and just putting enough in this record to show his qualifications. I feel that if I did any less I might be subject to criticism and I say that with the greatest respect to staff counsel.

Mr. Kanton: May I state this for the record, that I have absolutely no objection to the qualifications of Mr. Barnes to testify in the capacity he just stated he is going to testify.

The Examiner: Have you any objection, Mr. Scheetz?

Mr. Scheetz: No, I have not.

The Examiner: Mr. Tucker, you may proceed to satisfy Mr. Condon as to his qualifications.

What was the last question?

(The question was read, as follows):

"Q. How many millions of dollars of issues would you say roughly you have handled?"

The Witness: I think in round numbers, half a billion dollars would be conservative.

By Mr. Tucker:

Q. In connection with those issues, Mr. Barnes, did you have to make comparisons with other issues outstanding in the market at the time?

A. Very definitely so.

Q. So that you have had in connection with all of that financing experience, in connection with making comparisons betwen one issue and another?

A. That is correct.

D. C. Barnes—Direct Examination (Cont'd.)

[R. p. 1631] The Examiner: The Trial Examiner is sufficiently satisfied as to Mr. Barnes' qualifications. You may proceed, Mr. Tucker.

Mr. Condon: Exception.

The Examiner: Noted.

By Mr. Tucker:

Q. Mr. Barnes, does this correlation as shown on that chart, between the Federal Reserve index of production and the $5 preferred yield and the Standard and Poor's High Grade Preferred Stock Yield form a fair comparison, do you think?

Mr. Condon: May I have a general objection and exception to this entire line of testimony, so that I shall not have to interrupt?

The Examiner: You may, Mr. Condon.

Mr. Condon: An exception, sir.

The Witness: I think the correlation with the Federal Reserve Board production index and the yield of the Engineers Preferred stock is a fair correlation.

I think there is not a correlation between the production index to the same extent with the index of high-grade preferred stocks, and that is one of the purposes of this exhibit.

Dr. Badger, in his report, related very definitely his conclusions to inferences or conclusions drawn by him from the immunity of high-grade preferred stock yields and high-grade bond yields to changes in business activity. He pointed out that such high-grade securities as high-grade preferred stocks and high-grade bonds, particularly, related more to the cost of money than to fluctuations in business conditions; and I think this chart brings that out very definitely, and it proves also to my mind that Engineers' $5.00 preferred stock ranks more in the class of common stocks, in which there is a very close relationship between production indexes and the yields or prices of such stocks.

D. C. Barnes—Direct Examination (Cont'd.)

Mr. Tucker: I again offer the exhibit in light of the testimony of Mr. Barnes.

Mr. Kanton: May I ask several questions, Mr. Examiner?

By Mr. Kanton:

Q. The line appearing at the top of the page, Mr. Barnes, is a graph showing the high-grade preferred stocks extending on a yield basis from 1918 to 1946, is that correct?

A. That is correct, in the black line.

Q. That is the high-grade preferred stocks?

A. Yes.

Q. The yield basis of the Engineers' $5.00 preferred stock, which is the solid red line, in the testimony of Dr. Badger is a medium-grade preferred stock?

A. He so classified it.

Q. Do you agree with that classification, sir?

A. Well, I should say that it was not better than a medium grade.

Q. Now, you testified you have used the Federal Reserve index of production in the past for comparative purposes, with low-grade preferred stocks and common stocks, is that correct?

A. That is correct.

Q. In your opinion, do you think the three lines shown on this chart, one graphically showing high-grade preferred stocks, one graphically showing one medium grade preferred stock and the other an index of production which is supposed to reflect the positive correlation with low-grade preferred stocks and common stocks, is a proper chart for comparative purposes?

A. Yes, I think it is.

Q. Why is that, sir? Based on the remarks that I have just given?

A. Because I think what Dr. Badger classes as a medium grade preferred stock is closer to a low-grade preferred stock than it is to a high-grade preferred stock and therefore it is more responsive to changes in business conditions than is the high-grade preferred stock.

Q. Well, let us assume that $5.00 preferred stock is a medium-grade preferred stock. Would you think that this chart would be applicable to the points that are trying to be brought out through its introduction, sir?

A. I beg your pardon?

The Examiner: Read the question.

(The question was read.)

By Mr. Kanton:

Q. Do you understand that question?

A. If I understand what you mean by "points to be brought out" I think the points that the chart is intended to show are the close relationship beween the Engineers' preferred stock and the production index.

Q. But if the Engineers' Preferred stock can be properly classified as a medium-grade preferred stock, would such a comparison be feasible?

A. Yes, I think so.

Q. Even if it is a medium-grade preferred stock?

A. Certainly.

Q. Have you ever had any occasion in the past to compare the Federal Reserve Index of Production with a medium grade preferred stock? Or, as you testified, such index has been used by you in the past just for comparative purposes with low-grade preferreds and common stocks?

A. I think the chart speaks for itself, Mr. Kanton, in that it shows a very definite correlation between Engineers' preferred stock and the production index, and it shows no such correlation with the high-grade preferred stocks.

Now, there is no sharp cleavage line between medium-grade preferred stocks and low-grade preferred stocks as

they are progressing downward in security in character of security.

Q. Has any attempt been made to compare the Federal Reserve index of production with a composite group of medium-grade preferred stocks, to see if there has been any positive correlation, as you have testified, on Applicant's Exhibit No. 76 for identification?

A. I don't know of any comparison that has been made of a specific group of medium-grade preferred stocks, but the way to find out the correlation is to draw the curve showing the respective factors that you are to compare and a comparison, for example, of the production index with the price or yields of high grade bonds would show that there was no relationship,—no substantial relatio ship or close relationship,—between such an index and the price or yield of that class of security.

Now, as you depart from that class of security and get closer to a common stock, you get progressively closer to the full reflection of the production index and the price or yield of the security that you are considering.

Q. But you have not prepared any chart showing a comparison between what you would call medium grade preferred stocks with the Reserve index of production?

A. This is the only chart that we have prepared for this purpose.

Q. Have you ever prepared any chart showing the comparison of any of the three series of Engineers' preferred stocks with the Federal Reserve index of production in the past?

A. No, we have not.

Q. And this is the first time that any attempt has been made to plot a chart showing the yield basis of the $5.00 Engineers' preferred stock with the Federal Reserve Index of Production?

A. By us. You understand that financial services and textbooks are full of charts of this general character, comparing——

Q. By general character, you mean exactly a comparison between the yield basis of the Engineers' $5.00 preferred stock and the Federal Reserve index of production, or do you mean a comparison between the Federal Reserve index of production and a low-grade preferred or common stock?

A. Particularly common stocks.

Mr. Kanton: That is all, Mr. Examiner.

By Mr. Condon:

Q. Mr. Barnes, do you know the meaning of the coefficient of correlation?

A. Why, I suppose it is the degree in which the two curves follow each other.

Q. Is that just a supposition? Are you ad libbing or do you know that to be a fact?

A. I don't know the formula for determining it.

Q. Are you able to examine this exhibit for identification and state what the coefficient of correlation is with respect to these several lines plotted on the graph?

A. No, I am not.

Q. Do you know whether any such mathematical calculations were made by Mr. Hastings prior to the presentation of his document?

A. I doubt if he made any such computations.

Q. Did you have any discussion of that type with him?

A. No, I did not.

Q. Are you unaware of the mathematical calculations resorted to by Commissions to determine the degree of accuracy of these graphs by means of calculation of the coefficient of correlation?

A. I am not familiar with the formula by which these computations are made.

Q. Is this a new expression to you?

A. No, I have heard of the coefficient of correlation before.

Q. But you have never made any attempt to translate it in connection with this graph?

A. That is correct.

Q. Did you ever make any attempt to translate the coefficient of correlation with respect to any other plottings of this type?

A. Only by eye.

Q. Nothing more scientific than that?

A. That is correct.

Q. Is that the yardstick that has been applied by you and Mr. Hastings to this graph?

A. Yes, I think so. We have plotted two curves and observed the correlation that exists between the two curves.

Q. You say that you had occasion to refer to other indices of this character. Do you recall giving that testimony?

A. Yes, I do.

Q. Can you state how many indices of this character you have seen in your experience that are correlated to the Federal Reserve index of production?

A. Well, there are a great many of them.

Q. I am asking you what you have seen and what you have before you.

A. Well, for example, we have indices that cover manufactured and durable goods; we have indices that cover food production; we have indices that cover electric power, commodity prices, raw materials, semi-manufactured goods, manufactured goods, farm products.

Q. Are they separate indices or do they represent component parts of the Federal Reserve index of production?

A. Well, they are separate indices that are published.

Q. Do you find any there correlating the Federal Reserve index of production with the preferred stocks in the book that you have before you, from which you have been reading? And I mean specifically the preferred stocks of utility companies.

A. Well, in this same table we have a tabulation giving the index prices of utility securities.

Q. What type of securities, Mr. Barnes?

A. The stock prices.

Q. And what kind of stock?

A. Well, it is not specific in its description.

Q. Do you know what they purport to set forth there, whether they are common or preferred stocks?

A. I think unquestionably they are common stocks.

Q. Yes. Now, I have asked you to point out the correlations that have come to your attention with respect to the Federal Reserve index of production and utility preferred stocks, other than the Applicant's Exhibit No. 76 for identification. Have you ever seen an animal like that before?

A. Yes, I have seen many curves in which on the same curve has been plotted bond yields, preferred stock yields, common stock yields and business activity index, or——

Q. Mr. Barnes, I have asked you a very simple question. Have you ever seen an attempted correlation between the Federal Reserve index of production and a utility preferred stock; and, if you have, will you state where you saw it?

A. Well, I answered that question by telling you that I have seen curves showing the indexes of bonds, preferred stocks and common stocks, and the index of business activity, or Federal Reserve index of production.

Q. Restricting your answer, Mr. Barnes, if you please, to a correlation or attempted correlation between the Federal Reserve index of production and a utility preferred stock, can you answer that question?

A. Not a utility preferred stock by itself.

Q. That is the question I have asked you three times. Can we have a direct answer, if you please, sir?

A. I said, not a utility preferred stock by itself.

Q. Now, you were asked a question as to whether or not the Engineers preferred was a medium-grade preferred and I believe you said you felt that that was a fair characterization, or something of that nature. Is that correct?

A. I said that it was not better than a medium-grade preferred stock, if I recall my answer correctly.

Q. Yes. You wouldn't characterize it on the same basis as a low-grade common stock, would you?

A. No, indeed.

Q. When you say it is closer to a common stock than to a medium-grade stock, did you give that testimony, in substance?

A. I don't think I did, no. I would say that it is closer to a common stock—closer to some common stocks—than it is to a medium grade preferred stock; in fact, some common stocks are superior in investment value and security than Engineers' preferred stock.

Q. How far back are you projecting from the standpoint of time? Are you talking about January of 1946 in that answer?

A. I am talking about the present, yes.

Q. Now, you said the proper way to draw a comparison was to draw the curve, from the standpoint of attempting to correlate the relationship, if any, between the Federal Reserve index of production and the $5.00 preferred stock of the Engineers Company; is that your testimony?

A. I think so.

Q. By drawing the curve, are you referring to the graphic presentation referred to on Exhibit 76 for identification, Applicant's Exhibit No. 76?

A. That is correct.

Q. You have no other drawing of any other curve in mind except as set forth in this document, is that right?

A. When I am speaking of this particular comparison, no.

Q. Did you ever prepare any document like this for submission to your Board of Directors?

A. Submission to our Board of Directors?

Q. Yes.

A. No, I never have presented any comparison of that kind to our Board.

Q. Did you ever present a comparison of this type to any tribunal, any court, any rate-making body, or quasi-

public institution with which Engineers had any dealings or transactions?

A. Not that I recall.

Mr. Condon: That is all.

Mr. Scheetz: I have no questions.

The Examiner: All right, Mr. Tucker.

Mr. Tucker: I again offer the exhibit.

Mr. Condon: And I make the same objections and I feel that the testimony that has been developed here shows the complete lack of all foundation for any fair comparison and more particularly the lack of any competent testimony to support it being the basis for a comparative purpose or use in these proceedings.

The Examiner: Do you have anything to say, Mr. Kanton?

Mr. Kanton: Mr. Examiner, in light of the testimony of Mr. Barnes that he characterizes the Engineers $5 preferred stock as charted here as closer to what he would term a low grade preferred rather than what Dr. Badger would call a medium grade preferred, and that in the past he has used the index of production for comparison of low grade preferreds and common stocks to that extent I would have no objection to the introduction of Applicant's Exhibit No. 76 for identification as part of the case presented by the Applicant.

However, I wish to point out that there is a definite distinction being made as to the characterization between Dr. Badger and Mr. Barnes, if I am correct, as to whether Engineers $5 preferred stock is a medium grade or a low grade preferred stock. If I am mistaken to the extent that the Engineers $5 preferred stock is classified by Mr. Barnes as a medium grade preferred stock, I would have an objection to the use of this exhibit for the purposes already stated.

I further object to the graph going back to the period of 1918, from 1932, as going back too far in the past; and I don't think it can be used for any comparative purposes.

With those statements, Mr. Examiner, with reference to Applicant's Exhibit No. 76, I will leave it to your discretion to make a determination.

Mr. Schreetz: Mr. Examiner, not having objected to Mr. Barnes' qualifications, in fact having accepted them, I would not object to the exhibit.

It seems to me that the further question is as to the weight of the evidence.

The Examiner: I think that is the whole question, as to the weight to be given to this chart.

I think there is enough in the record clearly indicating that that is the situation in which the Commission might well judge as to the weight to be given.

For that reason, I will overrule Mr. Condon's objection and likewise Mr. Kanton's objection and submit this as Applicant's Exhibit No. 76.

I will allow you an exception, Mr. Condon.

Mr. Condon: Thank you.

(Applicant's Exhibit No. 76 is received in evidence.)

* * * * * *

RALPH E. BADGER

Cross Examination

[R. p. 1654] By Mr. Tucker:

Q. Dr. Badger, you testified on direct-examination, did you not, that in connection with the preparation of your report, at the transcript, 1353, you had read certain releases of this Commission?

A. Well, I don't see on page 1353 where I—yes, that is correct. I see the numbers.

Q. One of those releases that you say you read was Holding Company Act of 1935 Release No. 5021, which happens to be the findings and opinion of the Commission in the case of Virginia Electric & Power Company, Virginia

Public Service Company, and Engineers Public Service Company, in which the order at least is dated April 29, 1944?

A. Yes, sir.

Q. You read that release, did you?

A. Yes, sir.

Q. If you look at pages 10 and 14, those two pages that I have referred to, Doctor, would you say that the Commission was there figuring the adjusted net plant and property ratios on various bases both with and without intangibles?

Mr. Condon: May I have that read? I was talking to associate counsel here.

(The reporter read the pending question.)

The Witness: That is true as far as page 10 is concerned.

By Mr. Tucker:

Q. How about page 14, Doctor? The table is entitled, isn't it, "Relationship of Security Structure to Assets"?

A. On both pages 10 and 14 the accounts are shown, in the one case excluding accounts in 100.5 and 108.15 and also including amounts in accounts 100.5 and 108.15.

Q. Now will you look at the other release you there mentioned, on transcript, 1353, namely, release 5568; and with respect to that I direct your attention to pages 8 and 10. Does that show that the Commission made its calculation excluding certain intangibles?

Mr. Condon: When you say made its calculations, Mr. Tucker, do you mean a calculation?

Mr. Tucker: Yes.

Mr. Condon: Would that be a fairer statement?

Mr. Tucker: I think so. I accept the amendment.

The Witness: Yes, sir, they did.

Ralph E. Badger—Cross Examination (Cont'd)

By Mr. Tucker:

Q. Among other things, they excluded plant acquisition adjustments, plant adjustments, Account 107?

A. Yes, sir.

Q. And in that particular case, plant acquisition adjustments, Account 100.5 seems to have been a credit, isn't that true?

A. That is true, in the amount of $201,923.

Q. If you can tell me what that means, I will be grateful.

A. Presumably, it would indicate that they had paid less for certain subsidiary properties than the cost of said property to the unit first employing said property. That is what I would infer it to be.

Mr. Kanton: Mr. Tucker, is the purpose of these references to show that the Commission looks at all available data before it in any particular case and in the particular case you have before you?

Mr. Tucker: Yes, that is right.

Mr. Kanton: Thank you.

By Mr. Tucker:

Q. Now, as I understood it, you were going to review your determination of the asset values for the preferred as is shown by your report over the week end. Did you do that?

A. To the extent of eliminating reserves against depreciation in the value of investments?

Q. Yes, for one thing.

A. Yes.

Q. And eliminating 107 items, items in Account 107 which you and I understand to mean, I take it, substantially write-ups. Isn't that what Account 107 applies to, Doctor?

A. That is the way I would classify Account 107. I wouldn't so classify Account 100.5 as write-ups.

Q. I understand that you wouldn't from what you have testified here today.

Mr. Kanton: Is the record to show that the witness and counsel are referring to the Federal Power Commission's uniform system of accounts?

Mr. Tucker: Well, I think when you will read the record you will understand that.

The Examiner: The answer is yes.

Mr. Tucker: Anybody that is familiar with these matters would say that 100.5 was a Federal Power Commission classification, but that is what I am referring to.

The Examiner: Let's not get in an argument at this time. We all understand that.

The answer is yes.

By Mr. Tucker:

Q. You understood that I was referring to the Federal Power Commission's classifications in using these numbers, didn't you, Doctor?

A. The record might be clarified if the reporter, when we say one hundred five we mean 100.5.

Q. Yes, 100.5 and 100.1?

A. Yes.

Q. Did you make some revision of your calculations to show what the results would be, eliminating 100.5 and 100.1?

A. Yes, sir.

Q. And the reserves that we were talking about the other day which were set up against losses?

A. Yes, sir.

Q. Do you recall what I mean?

A. Yes, sir.

Q. Will you tell us the results that you got from those recalculations as briefly as you can?

A. I made first a study or perhaps I should say I amended or extended the study of Engineers Public Service Company and five public utility holding companies to sup-

plement the study on page 11 of Preferred Stockholders' Exhibit No. 29 and in that computation I showed the ratios for the five public utility holding companies and Engineers Public Service, including general reserves.

I also made a similar study in which I eliminated general reserves from all of the comparative companies and from Engineers Public Service and under the caption General Reserves was included Engineers Public Service Company reserves for depreciation or possible depreciation in respect to investments.

The caption on this sheet, discussing Engineers Public Service, says "Including Puget Sound." That, of course, would not apply for the years 1943 and 1944 and possibly might preferably be eliminated in its entirety. I, therefore, will take it out because it doesn't add anything to the computation.

Eliminating reserves for possible security depreciation reduces the book value of equity per share of preferred in the year 1942 from $225.65 to $191.31; for the year 1943 the reduction is from $192.40 to $181.99; and for 1944 the reduction is from $192.50 to $181.31.

Mr. Kanton: May I have a copy of that, Dr. Badger?

The Witness: The other ratios indicating the percent of prior obligations to total capitalization are changed slightly and those changes appear on the exhibits.

By Mr. Tucker:

Q. Could I have a copy of it, Doctor?

A. Yes, sir. I am going to give you one as soon as I finish crossing off this material. I would also like to state that I have not had an opportunity to check these figures myself. I hope that they are correct. They were prepared in some cases by me and in some cases by my staff with as much accuracy as we could utilize in the comparatively brief space of time.

Q. This paper, if I understand your testimony correctly, that you have just handed me, which I will ask to have marked as——

Mr. Condon: Now, just a second, if we are going to mark them. Let's mark the originals if you have no objection, Mr. Tucker.

Mr. Tucker: No, if you will let me mark it, please.

Mr. Condon: That is one. Do you have the other original study there before you, Dr. Badger?

Mr. Tucker: Now just a minute, Mr. Condon.

The Examiner: Proceed, Mr. Tucker.

The Witness: There is another part to this.

Mr. Tucker: Now wait just a minute, please. We have got to have a little orderly procedure, it seems to me.

Would you mark that, Mr. Examiner, please, Applicant's Exhibit for identification No. 77?

The Examiner: Let it be marked as Applicant's Exhibit No. 77 for identification.

(Applicant's Exhibit 77 was marked for identification.)

By Mr. Tucker:

Q. Now referring to Applicant's Exhibit for identification No. 77, Doctor, as I understand you, all that you said you reflected in this exhibit was to take out the reserves that were indicated both as to Engineers and the other companies shown on the chart, is that right?

A. That is correct.

Q. Just the reserves?

A. That is correct. No adjustment was made there for items classified as accounts 100.5 or 107.

Mr. Tucker: I offer Applicant's Exhibit No. 77 for identification in evidence.

The Examiner: Is there any objection?

(No response.)

Ralph E. Badger—Cross Examination (Cont'd)

The Examiner: Hearing no objection, it will be received as Applicant's Exhibit No. 77.

(Applicant's Exhibit 77 was received in evidence.)

By Mr. Tucker:

Q. Doctor, do I understand that you also made some additional calculations in respect of the preferred stock ratios shown in your report?

A. Yes, sir.

Q. Will you hand me a copy of those additional calculations so that I can talk to you about it?

A. I would like to state——

Q. Go ahead, make some statement about it if you want to. I don't care.

A. Yes, sir. This is quite important, I feel. I would like to state that in making these calculations——

Mr. Tucker: Perhaps for the record I might have it identified and then you can talk about it as an exhibit for identification. I offer this for identification as Applicant's Exhibit No. 78, Mr. Examiner.

The Examiner: Let it be marked as Applicant's Exhibit No. 78 for identification.

(Applicant's Exhibit 78 was marked for identification.)

By Mr. Tucker:

Q. Now referring to Applicant's Exhibit for identification No. 78, do you have some comment that you wanted to make about it, Doctor?

A. Yes, sir. On the second page of that exhibit would be indicated the eliminations that I made in connection with Engineers Public Service, and those eliminations consist of an item of $25,246,487.75 which figure appears on page 24 of Exhibit No. 37-T, Applicant's Exhibit 37-T, headed "Excess of recorded gross investments in shares of subsidiaries over the net assets applicable to such shares

at dates of acquisition, as adjusted to give effect, among other things, to reduction of certain properties", but I am informed that those are not electric properties, "to original cost."

There is also a deduction of $17,297,622.68 which represents plant acquisition adjustments in the amount of $17,297,622.68, that being a 100.5 item.

Q. Which one being the 100.5 item, plant adjustments? You call it plant adjustments; it should be plant acquisition adjustments.

A. It should be plant acquisition adjustments.

Q. Down below you say it, so I guess it is all right. Go ahead.

A. As against those gross deductions, I applied two items appearing on page 21 of Applicant's Exhibit 37-T, to wit, the reserve item of $7,947,076.04 and another item of $2,585,328.98.

I don't believe the specific allocations of those reserves or the items contained on Note 2 are quite correct, but the gross effect, nevertheless, would be the same whether they were allocated to the proper items or not. The gross effect would be the same.

There was another item appearing on page 24.

Q. Do you mean page 24 of Applicant's Exhibit 37-T?

A. Yes.

Q. Go ahead.

A. An item of $6,915,751.68, which is merely stated as plant adjustments in that tabulation. I was unable fully to interpret that account when I made my computation, but a discussion of that item with Mr. Benjamin would indicate that that should properly be classified as a 107 item, so this computation which you have at hand requires a further adjustment in the amount of $6,916,000, approximately.

Q. Without taking the time now to amend Exhibit 78 for identification, do you suppose that before tomorrow morning you could reflect the additional adjustments that you think should have been made of $6,916,751.68, which you say is Account 107 material?

Mr. Condon: Mr. Examiner, I object to that question on the ground that it presupposes testimony that Dr. Badger has not given. I bear in mind that these calculations were prepared at Mr. Tucker's request and there is nothing in the record to show, no evidence to show that these calculations are anything other than to indulge Mr. Tucker. We do not submit that these are proper calculations in any case. That is not Dr. Badger's testimony and I object to the question as to form.

Mr. Tucker: Well, I will withdraw the question.

By Mr. Tucker:

Q. Do you understand the nature of Account 107 of the Federal Power Commission classification?

A. Yes, sir.

Q. In effect it is a write-up, isn't it?

A. In some sense, yes, sir.

Q. Now if you had known that there was a write-up in the accounts that you were using in making your original analysis of these asset values, wouldn't you think it properly should have been taken out?

A. Not for the purposes for which that comparison was set up. The five other utility companies, as well as Engineers Public Service—now let me change that—at least two of the other utility companies and Engineers Public Service in their annual reports set up balance sheet figures without any reference in the balance sheet as such to other write-ups or accounts to be classified as 100.5 or related items.

In the case of all three companies, however, explanatory notes relative to such items are contained. The various investment services, such as Moody's, publish the accounts of all of the five utility companies on the same basis that I used in my report and only by examining the fine explanatory note—I mean they were printed in fine type—would it be possible for one to determine what amounts in the case of each company were involved in Accounts 100.5 or 107.

Furthermore, in the case of Public Service of New Jersey the following appears: "In November, 1943, Public Service Electric & Gas Company received according to the Stockholders' Report orders from the Federal Power Commission and the Board of Public Utility Commissioners of the State of New Jersey showing (1) $14,578,064 for electric properties, $20,509,936 for gas properties, and $14,750,147 for joint electric and gas properties, or an aggregate of $49,838,147 to be established in utility plant acquisition adjustments account (100.5); and (2) $32,708,159 for electric properties, $16,775,209 for gas properties, and $5,857,354 for joint electric and gas properties, or an aggregate of $55,340,722 to be established in utility plant adjustment accounts (107), and indicating that approximately $9,500,000 of the amounts to be established in the utility plant adjustment accounts should be charged to earned surplus as one step in the disposition of these amounts.

Public Service Electric & Gas Company does not agree with the findings in the staff reports and orders of the Commissions and is contesting the orders as to certain classifications and the disposition of certain amounts.

"The order of the Board of Public Utility Commissioners of the State of New Jersey relates only to classification of plant accounts and does not make any provision with respect to the disposition thereof. Public Service Electric & Gas Company filed responses to these orders and hearings with respect to electric plant were held during 1944 before an Examiner of the Federal Power Commission. Main briefs are to be filed by the Public Service Electric & Gas Company and the staff of the Federal Power Commission on or before February 20th, 1945 and reply briefs on or before March 31, 1945, at which there will be an oral argument before the Federal Power Commission."

That appears on page 37 of the published reports of the Public Service Corporation of New Jersey for the year ended December 31, 1944.

In other words, there is divergence of opinion as to how these matters should be handled. Apparently there is litigation in respect to how these matters should be handled, and I think it is proper to state that there may be a divergence in the minds of experts as to what effect this type of classification or the handling of such accounts may or may not have on the question of the value of preferred stocks.

Q. On the assumption, however, Doctor, that the item appearing on page 21 of Applicant's Exhibit 37-L, which you referred to heretofore today as T——

(Discussion off the record.)

The Examiner: Let the record show that the witness's reference heretofore to Applicant's Exhibit 37-T in his testimony was in error, and that he intended to refer to Applicant's Exhibit 37-L.

Is that right, Dr. Badger?

• • • • •

[R. p. 1668] By Mr. Tucker:

Q. Dr. Badger, I understand that before the adjournment for dinner you stated, in explanation of Applicant's Exhibit 78 for identification, that you overlooked an item of $6,915,751.68, being Account 107 as shown on page 24 of Applicant's Exhibit 37-L in Note D-1. You did so testify, did you not?

A. I did not testify that I overlooked that item. I testified that I did not feel that I had sufficient information concerning its nature to classify it, but that upon discussion of the matter with Mr. Benjamin I did feel that it should be classified as a 107 item.

Q. Yes. Now, if you had deducted this amount in Exhibit 78 for identification, would not the balance available for preferred stock, excluding Accounts 100.5 and 107, be $32,227,680.80 instead of $39,145,432.48, as stated in the line on Applicant's Exhibit 78 for identification opposite the

item "Available for preferred stock, exclusive 100.5 and 107," under the heading "Engineers Public Service Company"?

A. It would in respect to the computations that were made, also excluding reserve items.

Q. All right, with that explanation.

A. I am assuming the correctness of your arithmetic. I believe that to be correct.

Q. Now, you didn't, in Applicant's Exhibit No. 78 for identification, deduct, did you, an item of $3,783,413.36, which is unamortized debt discount and expense shown on page 20 of Applicant's Exhibit 37-L, did you?

A. No, sir, nor did I include an item of $1,785,946, which would have been represented on the liability side as unamortized premium less expense on bonds, so that neither the premium nor the discount items were given any consideration in the computation.

Q. Nor did you deduct in Applicant's Exhibit No. 78 for identification an item of $563,586.36 shown on the same page as capital stock expense, did you?

A. No, sir. In that connection I might also say that I gave no consideration to the item on the liability side of the balance sheet representing premium and discount on preferred stock of subsidiary companies in an amount of $341,663.

Q. Well, if you had given consideration to them in your calculations, how would you have treated those items, Doctor, to which you just referred, the unamortized premium less expense on bonds, on the liability side and the premium and discount on preferred stock of $341,663?

A. I would like to correct that to state that I did include the premium and discount item on preferred stock which appears on the liability side in the amount of $341,663, and I placed that in the category representing obligations prior to the preferred stock of the holding company. I did not take into account capital stock expense of $563,586. In view of the fact that both items represent on the one side a

premium, on the other side a discount, and presumably it would be written off over a period of years, I would say that they should either both be included or they should both be eliminated. If you made that computation on that basis, there would be a variation in the accounts of about $222,000. In other words, my calculations would be changed by that amount, which I believe is sufficiently small to warrant the statement that they would not change the ratios perceptibly.

Q. Well, that would leave, would it not, about $2,000,000 on the unamortized debt discount and expense item on page 20 of Applicant's Exhibit 37-L which ought to be reflected in your tabulation?

A. Well, I don't say that it ought to or ought not to. I say that if it is proposed to eliminate all of those items from both sides of the balance sheet, there would be a net difference of $2,000,000, approximately, that should come out of the assets side. I am not stating here, and in connection with this question, whether that should or should not be eliminated. I think that is a matter that we could reserve for discussion.

Q. Well, on the assumption that this net amount were deducted in Applicant's Exhibit 78 for identification, what would the item "Available for preferred, exclusive 100.5 and 107" become, Dr. Badger?

A. Would you give me the figure that you had for the previous computation there after deducting the $6,000,000 item? I didn't write that down at the time you gave it to me.

Q. $32,227,680.80.

Mr. Condon: Mr. Tucker, in your question you presupposed that there were no deductions for the adjustment accounts 100.5 and 107. Aren't you referring to a different line wherein the amounts are set forth as being available for the preferred exclusive of the Accounts 100.5 and 107, and you should deduct your $6,000,000-plus from $43,540,136.68, rather than from the $39,145,432.48.

Mr. Tucker: I don't care. Let the witness say where he would like to deduct it.

Mr. Condon: I think, in the interest of correctness of the record, that you inadvertently applied the deduction of the $6,000,000 figure and said that that was predicated upon a base that was calculated without deduction for the adjustment accounts 100.5 and 107, and I feel that the exhibit for identification does not so show.

The Witness: I think, Mr. Condon, that you may be confused in that there are two complete sets of computations there with 100.5 and 107 items deducted. In the first one, the reserve items, and including, in the case of Engineers Public Service, reserves for possible depreciation in investments is not taken out; it is included. In the second one, reserves for depreciation of investments in the case of Engineers Public Service and other general reserves in the case of the other five companies are deducted, as well as 100.5 items and 107 items.

Mr. Condon: But isn't it the fact, Dr. Badger, that the second set of tabular figures reading in a horizontal way refers to the adjustments excluding reserve items and deducting the adjustment accounts 100.5 and 107?

The Witness: Deducting all of the adjustment accounts 100.5 and 107, with the exception of $6,915,000.

Mr. Condon: So that if Mr. Tucker asked you to apply the deduction of this $6,000,000 to $39,145,432.48——

The Witness: You would then get the $32,227,000 figure.

Mr. Condon: But did that base exclude the 100.5 and 107 accounts?

The Witness: That includes all 100.5 and 107 accounts, including the one that I have indicated that I did not previously deduct, and it also excludes reserve items such as reserves for depreciation and inventory.

Mr. Condon: Thank you.

Ralph E. Badger—Cross Examination (Cont'd)

By Mr. Tucker:

Q. Now, Doctor, would you answer the question? What you have to do, isn't it, Doctor, is to take the reduction of $3,783,473.36 for unamortized debt discount and expense and the deduction of $563,586.36 for capital stock expense, or a total of $4,446,997, after deducting from that item the two items on the liability side that you testified with respect to, is that right?

Mr. Condon: I think that question is pretty confusing, Mr. Examiner, at least it is to counsel.

The Examiner: Well, if the witness understands it, that is the point.

Do you understand the question, Mr. Badger?

The Witness: Yes sir, I understand what it is going to be.

The Examiner: Let's have your answer, then.

The Witness: If we could go to the net result, I think what Mr. Tucker is about to develop is that there is a net amount involving these unamortized debt discount and premium items.

By Mr. Tucker:

Q. That is right.

A. That there is a net amount presently in existence on the asset side of the balance sheet of approximately $2,000,000.

Q. That is right.

A. And I believe he is going to ask me what the result would be if that $2,000,000 were deducted.

Q. That is right. I now ask you the question you said you thought I was going to ask you, Doctor, and ask you for the result.

A. The arithmetical computation would be $30,228,000, approximately.

Q. And would you translate that by slide rule, if I can get you one, into the last figure under the column "Engi-

neers Public Service Company, book value preferred," after all of these adjustments?

A. Well, I would get a value of approximately $77 per share.

Mr. Tucker: I now offer as Applicant's Exhibit No. 78 Applicant's Exhibit 78 for identification, subject to the adjustments which the Doctor has made on the stand.

Mr. Condon: Mr. Examiner, I have some preliminary questions to ask of Dr. Badger on this exhibit.

The Examiner: You may proceed.

By Mr. Condon:

Q. Dr. Badger, I hand you Applicant's Exhibit 78 for identification and ask you whether or not, in your opinion, this calculation prepared at the request of Mr. Tucker, plus the amendments and supplementations of your testimony with respect thereto, gives any fair or proper method for arriving at the going concern value or the fair investment value of the preferred shares of Engineers Public Service Company?

A. I don't think it gives any indication of the fair investment value or the going concern value or the liquidating value of the preferred stocks of Engineers Public Service.

Q. Would you state the reasons for your conclusion?

A. For one thing, we arrive at the net valuation here of $30,000,000. It has already been testified to that this holding company, Engineers Public Service, has approximately $16,000,000 in cash, against which there are no prior claims other than the preferred stocks of Engineers Public Service; from the record and on the basis of the testimony of Mr. Barnes, president of the company, there is evidence to the effect that Engineers' holdings in Virginia Electric & Power Company have a value of at least $65,000,000; there is a proposal involved in the 1945 plan promulgated by Engineers Public Service involving the sale of Gulf States at an aggregate valuation of approximately

$22,000,000, which value has been indicated as lower than the fair market value of that stock, in testimony——

Q. By approximately how much?

A. Well, my recollection is by——

Q. $6,000,000 or $8,000,000?

A. Somewhere between $6,000,000 or $8,000,000.

Q. Proceed.

A. And on the basis of my own appraisal of that stock, by at leas. $7,500,000. In addition to that, there is El Paso Electric, which has a fair value of somewhere between $6,000,000 and $8,000,000, so that the sum total of values that have already been established, readily marketable values that have already been established in connection with the assets of Engineers Public Service Company, against which there are no prior claims other than the preferred stock here involved, would total as follows:

$16,000,000 of cash;

$65,000,000 for Virginia Electric;

$30,000,000 for Gulf States;

$7,000,000, roughly, for El Paso, giving a valuation on these assets, in accordance with the evidence and/or records in this case, of $118,000,000. Certainly this looks ludicrous as compared with the value of $30,000,000. Now, one or the other method must be in error.

Q. And would you care to state your opinion as to which is the erroneous method?

A. It is my opinion that for the purpose which this computation of mine was originally made that the methods that I applied are more correct than the methods suggested in the cross examination, and it is my opinion that even there the values arrived at are erroneous and that the real value of the assets behind Engineers Public Service preferred stocks outstanding in the amount of approximately $39,000,000-plus, against which there are either no claims or very small claims, have a value of approximately $118,000,000.

Now, I must state that I have, in connection with that sentence, computed the other liabilities existing on the balance sheet of Engineers Public Service Company, the parent company, only at December 31, 1944, and I stated that there were no claims prior to the preferred stock. That should be corrected to indicate that at December 31, 1944, which is the last balance sheet I had available, there was an item of long term contract payments due in the amount of $645,773 and current liabilities in the amount of $226,539.77 and a reserve for taxes on income of prior years of $13,958, or an aggregate amount of considerably under $1,000,000, so that exclusive of that small amount of claim we have admittedly from the record here a value of assets, marketable assets of $118,000,000 behind the preferred stock of Engineers Public Service, with no prior claim, and I believe that could be representative of the fair amount of market value that you have on an asset basis as a protection against this preferred stock at the present time.

Q. Now, Dr. Badger, I understood your arithmetic in the questions propounded by Mr. Tucker to show a total value for the preferred, upon the basis of calculation in Applicant's Exhibit 78 for identification, which you prepared at his request, of approximately $30,228,000?

A. Yes, sir.

Q. Do I understand from your testimony that the actual value, tangible liquid value is almost four times that amount?

A. That is correct.

Mr. Condon: Mr. Examiner, I object to the document in its entirety and I move to strike all testimony with respect to it.

Mr. Tucker: Just a moment.

By Mr. Tucker:

Q. Doctor, will you look at page 11 of your report? I ask you what your purpose was of putting into your report

the tabulation shown on page 11 if you feel the way you now said you feel?

A. It was purely for the purpose of making a comparative study with five other holding companies on a similar basis throughout and the only purpose for which that was used was in connection with that study, which appears on page 15, and the results of that study on page 11 are carried over and are indicated on page 15 to show comparative studies computed on similar bases for the five holding companies.

Q. But you do there show book value equity, preferred shares of Engineers, don't you, in a series of tabulations running across the page for the years 1941, 1942, 1943 and 1944, and that is book value?

A. I show it and I show the basis on which it was prepared. I show the items that went in constituting it.

Q. Now, isn't it true, Doctor, that in Applicant's Exhibit No. 78 for identification we do no more than to take out of those figures there, at least with respect to the year 1944, certain items that you admit wouldn't have any realizable value for the preferred stock—you can't sell a write-up and get any money for it, can you?

Mr. Condon: Now, I object to the form of the question on the ground that it is triple-barreled.

The Examiner: I think if the witness understands it he can answer it, Mr. Condon.

Mr. Condon: May we have the question repeated?

The Examiner: Do you want to hear it?

Mr. Condon: Yes.

(The question is read.)

Mr. Condon: I submit that that is a question that is clearly objectionable as to form and should be reframed.

Mr. Tucker: Strike out the words "you can't sell a write-up." Strike out the last phrase and then answer the question, Mr. Badger.

The Witness: I would say that for the purpose for which this balance sheet was prepared that I would be entirely unwilling to admit, and do not admit for this record or any other record, that the write-up items or the unamortized debt discount in respect to certain securities that were issued do not have a value. That involves us at considerable length into a question of accounting.

Mr. Tucker: Just a minute before you——

Mr. Condon: Let him complete his answer, please, Mr. Tucker.

The Witness: If you wish me to go into that at length, I can prove——

Mr. Tucker: Just a moment, if you will, please.

Mr. Condon: May the witness be permitted to complete his answer, Mr. Examiner.

The Examiner: Proceed with your answer, Dr. Badger.

The Witness (Continuing): For accounting purposes it is necessary that those items appear there and it is perfectly proper that they should appear there and when one is making the study of the nature as the study appearing on page 11, I contend that the study is proper in that they are there included.

By Mr. Tucker:

Q. 78 was a comparative study involving all of those companies, wasn't it?

A. 78 was a comparative study with very substantial modifications and the treatment of accounts that I don't subscribe to here as being proper in preparing an exhibit of that kind.

Q. Well, making the deductions of 107 and 100.5, Doctor, would get us back to what the Federal Power Commission talks about as original cost, wouldn't it?

A. That is correct.

* * * * *

Ralph E. Badger—Cross Examination (Cont'd)

[R. p. 1685] By Mr. Tucker:

Q. Applicant's Exhibit No. 78 for identification, Doctor, is a method of approach when you are trying to determine over-all this question of value for the preferred stock, isn't it?

The Examiner: Can you answer that, Mr. Badger?

The Witness: I thought the question had been objected to.

The Examiner: This is another question.

(The question is read.)

The Witness: Well, I presume any method that anyone might use is an approach. As to whether it is an approach that I should feel should be accorded great weight or little weight is, of course, a different matter. One can make any computation that he desires or feels proper in his own mind in arriving at a given value. I don't feel that the approach as carried through, together with the collateral computations that have been required in this case, gives any realistic picture of the value of the assets which are available as a security for this preferred stock.

By Mr. Tucker:

Q. But did you find when you read, as you have testified you did, Commission Release 5568 and Commission's Release 5021, that the Commission made somewhat the approach that is made in Applicant's Exhibit No. 78?

Mr. Condon: I object to that.

Mr. Scheetz: Objected to.

Mr. Condon: I object to that on the ground that it is Mr. Tucker's characterization of what those releases contain, that they are not in evidence and it is not proper cross examination.

Mr. Tucker: The witness said that he read them.

Mr. Condon: That doesn't make any difference, Mr. Tucker. If you wish to point out to this witness any parts

of the releases that he read that are inconsistent with his testimony, that is the proper way to cross examine, not to characterize a document not in evidence and to ask him if he didn't make some calculation at variance with some of the material contained therein. You were denied the privilege of having these documents received in evidence in toto by the Examiner and you took exception and I submit that this is an oblique effort to accomplish the same result and should be rejected and I object to the question.

Mr. Tucker: I press the question.

Mr. Scheetz: Mr. Examiner, my objection is a simple one, that I don't think it is proper to characterize the data referred to as the Commission's approach, because I think it carries implications of a method of valuation and I don't think that that necessarily follows.

Mr. Kanton: Mr. Examiner, I believe I stated my position prior to the dinner recess, which was restated by Mr. Condon and concurred in by Mr. Scheetz.

The Examiner: I will sustain the objection, Mr. Tucker, and allow you an exception, if you desire.

Mr. Tucker: Will you save the exception, please?

By Mr. Tucker:

Q. Instead of using the word "approach" I ask, with respect to Commission Release 5021, whether the Commission on page 14 of the release, which you say you read, did not make an analysis of assets on the basis, first, of excluding 100.5 and 108.15, and then including amounts in Accounts 100.5 and 108.15.

Mr. Condon: Just a minute. May I examine that release for a moment, please, Mr. Tucker?

Mr. Scheetz: Mr. Examiner, it seems to me that it is a misnomer to call it an analysis of assets, but I won't object, because I think the witness can handle it.

The Examiner: I think the witness is capable of handling it.

Ralph E. Badger—Cross Examination (Cont'd)

Mr. Condon: I would like to draw the Examiner's attention to the fact that this does not appear to be an 11(e) proceeding at all. What the witness has had drawn to his attention were the findings and opinion of the Commission in the matter of Virginia Electric & Power, Virginia Public Service Company and Engineers Public Service Company, and it is apparent, whatever use this Commission had for the particular tables, that there is nothing in here to suggest that that same method was employed or was to be employed in connection with a valuation of preferred stock on a going concern basis and I object to it.

The Examiner: I will overrule your objection. I think Dr. Badger is well able to answer that and explain that situation. I think it can be included as a part of his answer just as well.

Mr. Condon: I respectfully except.

The Examiner: Now, Dr. Badger, do you understand the question or do you want it read back to you again?

The Witness: On page 14 computations regarding adjusted net plant and property calculations are made on four different bases, one basis excluding amounts in Account 100.5 and 108.15, but not adjusted to eliminate certain unamortized debt discount and expenses and capital stock discount and expenses, and in another case adding those back. There is also a computation made including amounts in Accounts 100.5 and 108.15, and likewise including and excluding unamortized debt discount and expense, capital stock discount and expense.

The Examiner: Now, in that case was the Commission dealing with an 11(e) case in appraising the value of the stock? In other words, was the situation comparable with the present hearing?

The Witness: I don't see that it was in any way comparable, Mr. Examiner.

The Examiner: In what respects?

Mr. Condon: He said in any way.

Any further questions, Mr. Tucker?

Ralph E. Badger—Cross Examination (Cont'd)

The Examiner: I assume from your answer, Dr. Badger, that the situation there was not analogous with the present situation at all.

The Witness: That is correct.

* * * * *

[R. p. 1693] Mr. Condon: I now renew my motion to deny admission to Applicant's Exhibit 78 for identification on the ground that it is incompetent, that no basis has been laid for its reception, that it is misleading, and the only testimony in this proceeding is to the effect that it has no probative value. In addition to that, and supplementing my prior application, I ask that Dr. Badger's testimony elicited on cross examination with respect to this exhibit and his supplemental calculations be stricken for the reasons asserted.

The Examiner: Does Commission counsel have any comments to make on it?

Mr. Kanton: Mr. Examiner, I think quite a bit of time and effort have been put into the preparation of this exhibit and into the comments and questions with respect thereto by Dr. Badger and Mr. Tucker. While I do have some question as to the relevancy of this exhibit and the testimony with respect thereto, because Dr. Badger has himself stated that, while he has prepared this exhibit, that he did not place any weight thereon, I would not object to letting the exhibit come in and the testimony with respect thereto for whatever consideration the Commission may deem it is worth.

Mr. Condon: Mr. Examiner, I feel that, putting staff's counsel's statement succinctly, it amounts to nothing more than a desire not to have Dr. Badger's efforts in this connection go unrequited. I assure staff counsel that that is not a basis or foundation for admitting an exhibit which was prepared, I submit, over the protest of preferred stockholders' counsel, who suggested that if Mr. Tucker wishes to offer this line of proof he should get his own expert and lay a proper foundation for the document.

Now, the fact that we spent a lot of time interrogating this witness with respect to a document not in evidence, the Rules of Evidence are clear that if the document itself is not admitted on the ground that no proper foundation has been laid, and here I submit there isn't a shred of evidence to support its admission, but for the mere request of Mr. Tucker that we sought to comply with, there is nothing to support this document at all, and if that be true, how much time we expended on it, due to the forbearance of counsel out of respect to the Examiner, shouldn't serve as a foundation for its admission. I submit it should be denied.

Mr. Kanton: Mr. Examiner, technically I agree with Mr. Condon, and from his interpretation of my remarks, and my own interpretation, there is no doubt in my mind that there should be an exclusion of this exhibit and the testimony pertaining thereto, because if Mr. Tucker wanted to put this in evidence, and this goes to his whole case here, he had every opportunity to have exhibits prepared and have one of his witnesses, either Mr. Barnes, Mr. Hastings or Mr. Benjamin, take the stand, prepare it and comment thereon, but when he takes the position, as he has here, of having preferred stockholders' witness prepare something and then have the same witness, in answer to his questions, say that he places no reliance on it, technically I don't see any basis for admission. However, for whatever consideration, as I said before, the Commission may want to give it, of course, subject to your ruling, technically speaking I would have an objection, but otherwise I have not.

Mr. Tucker: I have just this to say: I think the Commission would welcome this exhibit.

Mr. Condon: Mr. Examiner, this Commission has been criticized publicly for failing to adhere to rules of evidence, and I submit if there was ever a document that had not a scintilla of basis for presentation of an exhibit this is a shining example.

The Examiner: I am inclined to agree with you on that, Mr. Condon, but on the other hand we have a study here,

this report of Dr. Badger, and he has had certain approaches made to valuations of this stock and Dr. Badger admitted, in answer to a question by Mr. Tucker, that this is one of the approaches, although he didn't agree that it was a proper approach. I also agree with the position of Commission counsel that Mr. Tucker had full opportunity for his own experts to have this exhibit prepared and offered, and it might be technically objected to for that reason, but I think there is enough in the record to show just what it is and I don't think there is any particular harm done by letting it in the record, because the Commission will have all of the information before it in considering this exhibit, and for that reason I am going to overrule your objection and admit it as Applicant's Exhibit No. 78.

(Applicant's Exhibit No. 78 is received in evidence.)

Mr. Condon: I respectfully except.

Mr. Scheetz: Mr. Examiner, I assume that my earlier objection will be considered as having been renewed and, I assume, overruled by your recent ruling.

The Examiner: Off the record.

(Discussion off the record.)

Mr. Condon: Mr. Examiner, I am wondering if, without disrespect, I might point out one thing that I feel may serve as a basis for reconsideration of your Honor's ruling with respect to this exhibit. I understood you to say that Dr. Badger's testimony was to the effect that this was one approach to this particular——

The Examiner: But that he didn't agree with it. He said it wasn't the right approach.

Mr. Condon: That testimony was coupled with the rest of his answer, which said that anybody could make any kind of calculations, but he has repudiated and disowned this document and I respectfully urge that with that as a premise there is no basis, there is no testimony to show that this is a proper method at all, that is, the basis for the

admission. Simply because it is an approach or a method of calculation, as Mr. Tucker accepted an amendment to a question, it does not serve as a basis for admitting it.

The Examiner: Well, the Examiner has already stated in his opinion that the approach was entirely improper, it wasn't properly proved, but that I saw no particular harm in admitting it into evidence with the testimony of Dr. Badger on the subject, and I see no particular reason for reversing myself on that. It will be admitted as Applicant's Exhibit No. 78 and I will allow you an exception.

Mr. Condon: Exception.

Mr. Tucker: I have no further questions.

The Examiner: Now, do you went to cross-examine next?

Mr. Kanton: Yes.

By Mr. Kanton:

Q. Dr. Badger, page 4 of your report, second full paragraph, your definition of fair investment value, reading: "Fair investment value may be defined as the price or value at which the shares of the several classes of stock would exchange hands between willing buyers and willing sellers, neither under compulsion to buy or to sell, and both thoroughly informed of all of the various elements of value."

Could you tell me what you had in mind when you used as part of your definition "all of the various elements of values"?

A. Well, the elements of value would include a question of the history of the enterprise, the question of its management, the nature of the business in which it was engaged, the question of competition, the question of past, present and future earnings, the dividend-paying capacity of the company, the asset values behind the security—that, I think, would cover the more important elements.

Q. And in your determination of the fair investment value of the preferred stocks of Engineers did you take into consideration every one of those elements of value?

A. Yes, sir. I did not cover them all in this report, but I gave consideration to all of them.

For example, I didn't believe that it was necessary to engage in a long written report on the history of this company, because it is fairly well known to the Commission through various previous hearings.

I didn't discuss the question of management, because I didn't believe there was any divergence of opinion as to the ability of the management; the nature of the business is well known to the Commission and to other interested parties, so there were some of the elements of value that I did not discuss in the report, but I certainly did give consideration to them in my arriving at the value of this stock.

Q. In other words, your over-all judgment figures which you set forth in the conclusions did consider in one form or another all these elements of value?

A. That is correct.

Q. You speak on page 4 under the title "Basis of Valuation," "Although the several classes of preferred stock of Engineers Public Service Company are bought and sold on the New York Stock Exchange, the reported prices at the present time can not be regarded as representative of fair value."

Now, my question is: Can market value ever be regarded as representative of fair value or fair investment value, as you put it?

A. Well, that is a rather difficult question to answer. I think it would be a fair statement to say that in a free and unfettered market that on any given date the market prices as emanating from purchase and sales might or might not be the fair value, but that they tended to approach it, and stocks that are actively traded probably approach fair investment value very closely, unless by virtue of pronouncements by the management of the company, unless by virtue of the spreading of rumors, unless by virtue of circumstances that create either fear on the one hand or a favorable atmosphere on the other hand, through events that

may or may not be permanent and as the result of those events unduly depress or unduly raise the price of stock, that in the case of actively traded stocks we frequently have a close approach to fair investment value represented in the market prices of stocks.

Q. Using your expression "Free and unfettered market" in your experience as an expert financial analyst have you ever noticed any stock or any time when the stock market was ever in a condition that you could say it was free and unfettered?

A. Well, I think it more closely approaches it at certain times than it does at other times. For example, in the period between 1929, and I might extend that period well into the '30s, we had a serious depression involving heavy liquidation of borrowings, which had been made by individuals to carry securities, and unquestionably market prices at that time were depressed, possibly very substantially below their true investment values because of necessitous liquidation. It is my opinion that for a considerable period of time, and as the result of adverse political developments in respect to public utility stocks, that certain public utility stocks were selling below their fair investment value. There may be other periods, such for example as the present time, when a stock like this newly launched automobile firm, may be selling at above its fair investment value. That, of course, is a question that will take time to answer, but, on the other hand, stocks that are very actively traded, without any undue influences prevailing in a given time, presumably closely approximate their fair investment value.

That is about the only answer that I could give to that question.

Q. But you would not, in your opinion, as an expert, substitute market values as a test to determine fair investment value in and of itself?

A. No, sir.

Q. And would you say that preferred stocks similar to those of Engineers Public Service Company, or any preferred stock of a holding company which is under the jurisdiction of the Holding Company Act, has a free and unfettered market?

A. Well, I would say that many of them do not have a free and unfettered market.

Q. And with specific reference to the Engineers preferred stock?

A. That is true. I do not believe that that stock at the present time is enjoying a free and unfettered market and I think it is influenced, as I have stated, by the proposal of the company, and the threat of litigation in connection therewith, to pay off such stock at $100 a share.

Q. On page 7 of your report, Dr. Badger, subject to the qualifications placed on part of this report, which you made during the cross-examination by Mr. Tucker, as to the permanent nature of prices of preferred stocks, were your remarks directed not only to high grade preferred stock prices, as you state on page 7, but also to medium grade preferred stocks, as you so classify the Engineers preferred stocks?

A. Well, I think that over a period of years that a stock classified as medium grade would normally fluctuate over a wider range than would high grade preferred stocks. I think that would be a fair statement and one that would have to be made in the interests of truth. There may be periods, however, during which medium grade public utility preferred stocks may be expected to maintain a level over a considerable period of time, and when I stated that it was my opinion that this value that I was testifying to here was a permanent value, I used the word "permanent" as the antithesis of a temporary fluctuating or speculative value. The value which I am attesting to here is in my opinion a fundamental and real value under the circumstances as they surround the money markets today, as they surround the utility industry in general, and as they surround Engineers

Public Service Company in particular, and I don't believe that they represent in any sense of the word fictitious, temporary or speculative values.

Q. And you are placing in that category, subject to your minor exception, both the high grade and medium grade preferred stocks, as you so classify them?

A. Yes.

Q. Would you also place in that classification low-grade preferred stocks?

A. Well, I think that in answering that question it would be necessary to go into the nature of each specific stock. I would say, as a class, that unquestionably low grade preferred stocks would fluctuate over a much wider range than would medium grade or high grade, and when you ask me what is likely to take place in respect to low grade common stocks today, you are more or less asking me what I think is going to occur with respect to the market, if I understand your question.

Q. No. That was not the purpose of my question. I was getting back to your statement as to the permanent nature, so far as one can humanly foresee, as you used it, and applying that statement, as you have, to both the high grade and the medium grade preferred stocks, I wanted to know whether you would also apply, aside from what you call wider fluctuations, the same opinion as to low grade preferred stocks.

A. Well, about the only answer I can give to that is this: that it is my opinion that, at least for some time to come, low grade preferred stocks are going to enjoy a good market. They may be selling at levels today that are below levels that will be attained subsequent to now, but those levels are likely to remain more or less permanent for at least two or three years.

Now, in the case of a low grade preferred stock we could have a substantial decline in value occasioned by what we would call a temporary reaction in the common stock market, and that might carry low grade preferred

stocks down along with the decline in common stock prices. I don't believe, with this money market, that that type of a temporary decline or corrective movement, as we call it, in the common stock market, would be likely to affect the value of medium or high grade preferred stocks, at least it would not do so appreciably.

Q. And interpreting your last remarks, a temporary reaction or corrective movement in your opinion would not effect the Engineers preferred stock?

A. That is correct.

Q. Dr. Badger, in the top paragraph of page 11, last sentence of the first paragraph, "It is a reasonable assumption therefore that this Company should continue in future years to register progress along with other units in the industry." Now, is your reasonable assumption based primarily on past, present, or future earnings levels of Engineers, or is it based on one or two or three of them?

A. May I have that question?

Q. (The question is read.)

The Witness: I would say it is based on all three.

Q. Referring now to page 15, Dr. Badger, you use for comparative purposes the five utility companies listed in the table on this page. Can you tell me how you went about selecting these five companies, and why you consider them similar or comparable with Engineers Public Service Company?

A. Well, I wouldn't want to say that any company was exactly comparable to Engineers Public Service, and I believe I stated that at no time have I attempted to take one company or a group of companies and apply so-called price-earnings ratios or price-dividend ratios, or any other ratios from that company over to Engineers Public Service. This study was, along with other studies, purely for the purpose of fortifying my judgment as to what I thought these stocks to be worth. The times dividend coverage in respect to all of these companies—and I refer now

to the times all charges and preferred dividends were earned—ranged from approximately a 1.25 basis to a 1.75 basis. There were some exceptions during certain years. That placed the coverage charges of these companies within the range during that period for Engineers Public Service, and there again I state that my figures are approximate, because in three years, without excluding Puget Sound, which, during those three years tended, at least during two of them, substantially to reduce the coverage—in those three years the coverage ranged from a 1.2 basis to a 1.22 basis. I figured that close enough to approximate the 1.25 to a 1.75 basis. That was one of these factors. In fact, I might say that was one of the most important of the factors that I used in selecting these companies,—I endeavored to cover, in so far as possible, all holding companies dealing with electric light and power in a substantial measure for making that comparison.

Q. Doesn't Columbia Gas and Electric Holding Company system have large gas operating companies?

A. Yes, it does. Of course, it does at the present time have very substantial electric properties too. I believe Columbia Gas is at the present time under order to divest itself of those electric companies, although it is my opinion that the order has not as yet been carried out; but it has got very substantial electric properties.

Q. Well, in the introduction to this table, you said these holding companies are similar in many respects. Now, in choosing these five companies, did you also look at other holding companies, say, for instance, Commonwealth and Southern or United Light & Power? And in so looking at them—I am just using holding companies for examples—did you look at them and then put them aside, as not comparable with Engineers Public Service Company?

A. I did, yes. Commonwealth and Southern, for example, I think I can indicate why that was discontinued. I would like to refresh my memory on some of these things, because it is a little difficult for me to continuously bear all

of these factors in mind. I would like to run down that Commonwealth and Southern and explain the reason for excluding it. Commonwealth and Southern was excluded because it had accumulations of $29.25 thereon at January 2, 1946, and the dividend record of that company with that arrearage, to my mind, would have made it an improper comparison.

Q. Using that illustration, would you say the five public utility holding companies that you did use have a dividend record comparable with Engineers?

A. The one exception would be Niagara Hudson on which, at the present time there is an accumulation of unpaid dividends. I have forgotten the exact amount, but I showed it in my report. In computing the price, I deducted the accumulated dividends with a ten percent discount thereon.

Q. Is that present arrearages? As of the time you prepared this report?

A. That is correct, sir.

Q. So, after examining, as you put it, quite a number of public utility holding companies, you, in your opinion, decided that the five holding companies appearing on page 15 were the closest comparable with Engineers Public Service Company—is that correct, Doctor?

A. Those were the five which I was able to find which came the closest to resembling Engineers Public Service,—and I don't say that the comparison is 100 percent by any means, in the case of any of these five, but they were the five most comparable ones that I could find in examining a very large number of holding company issues.

Q. Would you say basically that from this comparative study on page 15, that you did use it as a test for arriving at the value of the Engineers preferred as set forth on page 17 of your report?

A. Only to the extent that it tended to corroborate my judgment.

Q. Of what the Engineers preferred stock is worth on a going concern basis?

A. That is a corroborative study only.

Q. Referring now to page 17, the second full paragraph appearing thereon, next to the last sentence:

"These prices, of course, are without reference to the call prices at which these stocks can be called;" and paraphrasing the previous sentence you gave certain values for the three series of preferred stocks. Did you also mean to say here, with respect to these valuations, that it was not only without reference to the call price; it was also without reference to what you would put the impact of the Public Utility Holding Company Act?

A. Yes.

Q. When you say "ex the Holding Company Act" as you use it in your report, do you mean ex the impact of Section 11 of the Holding Company Act or ex the entire impact of the Holding Company Act? I have specific reference as to whether you mean the impact of section 11(b)(1) of the Act as affecting Engineers?

A. I have reference to the impact of Section 11, and for purposes of clarity, that entire phrase should be used or substituted in lieu of the phrase "ex the Holding Company Act."

Q. Dr. Badger, on pages 19 and 20—and I think you go on to page 21—you have what you call a special analysis regarding Virginia Electric and Power Company. I think you told us that this study was made at the request of Mr. Condon. Can you tell me, in arriving at your determination of the fair investment values of the preferred stocks of Engineers, what weight, if any, you gave to this special analysis of Virginia Electric and Power Company?

A. I would like to make one correction. If I did state that that was made at the suggestion of Mr. Condon, I did not so intend, because no one suggested that I make that study other than myself. In other words, I believed that that study was a necessary study to complete my analysis of the fair investment value at the present time of these preferred stocks, because obviously the Company had

it within its option, and presumably without any substantial legal contest, and possibly without any legal contest—I don't know what authority they may have required from the Public Utility Commission—but exclusive of that, they had it within their power to proceed up to this point on their own initiative, and whether they were operating under the impact of Section 11 or not, this is something that they may have carried out. So all that is necessary to show what the value of the preferred stock would be in so far as they might pursue the various alternatives that were open to them.

Q. I think my question had a double-barreled effect, if I may quote Mr. Condon, and the second part of the question is, How much weight did you give to this so-called special analysis in arriving at the fair investment values, as you put it, of Engineers' preferred stock?

A. Well, I would say I gave confirmatory weight to it, in that it confirmed my original appraisals.

Q. Did you in your consideration, in preparing this special analysis, consider whether Virginia could support the present corporate structure of Engineers as now constituted?

Mr. Condon: Just a minute, Mr. Kanton,—I am a little confused.

This special analysis on pages 19 to 21 suggests the employment by Engineers, if I read it correctly, of $10,000,000 of the $16,000,000 cash on hand, the sale of the Gulf States stock for approximately $22,000,000, and the retirement of all the 5½ and 6 per cent preferred and a substantial amount of the $5 preferred.

I wonder if you would be kind enough to reframe your question?

Mr. Kanton: No, I wasn't referring to the special analysis as set forth on pages 19 to 21 of the exhibit. I just asked Dr. Badger if, in his analysis of Virginia he gave any consideration as to whether the present corporate structures as now constituted with the preferred stocks could be supported by the earnings of Virginia alone, and

assuming only for the purposes of my question that El Paso and Gulf States went out of the picture.

By Mr. Kanton:

Q. The only question I asked, Dr. Badger, is whether you gave any consideration to that?

A. Well, I gave it only passing consideration—only passing consideration—because it occurred to me that they might and could support the present structure, but not by what I would consider to be a satisfactory margin of earnings.

Q. For the preferred stock?

A. That is correct. It could be done, as I recall it, but the earnings coverage would be comparatively small.

Q. It wouldn't be as good as it is today, naturally?

A. No, sir.

Q. And you wouldn't think it feasible?

A. I wouldn't consider it desirable to do so.

Q. On the last page of your report, Dr. Badger, page 22, the last paragraph, if it read this way:

"It is my further opinion that these several classes of preferred stocks would have the same values, whether Engineers Public Service Company divests itself of El Paso and Gulf States (under the Plan of September 10, 1945) and either continues with Virginia Electric & Power Company as its sole subsidiary"——

you will notice I have just left out your first "whether" phrase, and went in to the second one. Could you tell me what you meant by that, sir?

A. I meant that there would be no changes in my appraisals.

Q. Well, isn't that somewhat in the nature of the question I just asked you, or did I misinterpret your language here?

A. I think it would be similar, with one exception, that the Company, having divested itself of El Paso and Gulf

States, under the Plan of September 10, 1945, having done that, the Company, the directors, certainly would be in possession of a substantial amount of cash; and they have outstanding three classes of preferred stocks, starting with the 6 per cent dividend, the 5½% per cent dividend and the 5 per cent dividend, callable, I believe, on thirty days' notice, in whole or in part, at 110 for the 6, 110 for the 5½ and 105 for the 5 per cent preferred, and it would occur to me that they certainly in good judgment would do either one of two things; they would utilize excess cash for the purpose of calling as much of that stock as they could, starting with the highest coupon, or they would omit taking that action on the assumption that they might find alternative uses for the money through acquisition of other earnings properties.

Q. In other words, what I was getting at in the previous question and the one I asked you just now, in your last paragraph you are assuming here that if either of these three possibilities took place and the preferred stocks of Engineers were outstanding at that time, you would come to this conclusion?

A. Yes, sir.

Q. In your considerations, in your over-all considerations, how much weight did you give to the voluntary liquidation preferences stated in the charter with respect to the preferred stocks of Engineers?

A. Well, I gave weight to those factors within certain limits, as being limiting factors of value, not positive, but limiting factors. In other words, as I endeavored to point out, were it not for these call features, it is my opinion that the preferred stock of Engineers would be worth in excess of these values, but since the Company has cash, is within the possibility of coming into the possession of more cash, and since the Company has the right under the contract to call these stocks in, all or in part, an investor isn't going out and pay a very substantial premium for those and thus put himself in the position of what we would call a nega-

tive yield on the securities, but they are not what I would determine to be a value creating factor.

Does that answer your question?

Q. It does. I think you have used two terms which I would appreciate it if you would embellish upon. You used the term limiting factors of value and positive factors of value. Now, if I could try to see when you went and reviewed all these computations you made with respect to the preferred stocks of Engineers, and you sat down and sat back and reviewed them in your mind, you did have what you call certain limiting features and certain positive features. Could you tell me now to the best of your ability and recollection what you considered limiting features and which you considered positive features, and which ones you gave the most weight.

A. Well, we will start out with the limiting factors first. The call feature is a limiting factor which we might further define as being of a mechanical nature. It doesn't require any judgment or any interpretation other than to say that there probably would be some period during which the stock would be called and there would be a still further premium added to represent an investor's appraisal of what that period would be. There are other limiting factors of value arising, because this preferred stock, in my opinion, is a medium grade preferred stock and not a high grade preferred stock, and I think that in reviewing those I would say that the coverage was less than is necessary,—I mean the earnings coverage is less than is necessary to cause it to be rated as a high-grade preferred stock.

The dividend record of the company, while clear for a number of years in the past, has not always been clear. That would be a limiting factor as far as value is concerned.

I would also say that another limiting factor arose because of the consolidated debt ratios, which are less favorable in the case of this company than they are possibly in American Gas and Electric and other companies that may be of higher grade.

Those are some of the limiting factors, and I tried to give due weight to all of them. On the positive side, we have evidence of continued improvement in earnings, extending on the basis of the Company's own estimates, through the year 1946.

Q. Would you characterize that as future?

A. Future earnings, yes. We have good management. We have on the basis of an examination of the holding company structure alone a very favorable picture with very substantial assets.

Q. You mean on a going concern basis, as now constituted? You mean the three operating companies?

A. Regardless of how it is considered, because if the Company continues on a going concern basis, the value is there. If the Company is liquidated, then it comes into possession of cash, because of the fact that it is divesting itself of assets, in lieu of cash.

On the basis of preferred dividend coverage alone, we have a fairly strong picture with an improving picture. I think those would constitute some of the favorable factors.

Q. There are other factors, perhaps?

A. Unquestionably there would be.

Q. Did you consider the liquidation preference of the preferred stock as a limiting factor?

A. I considered that as a limiting factor, yes, sir.

Q. And now you mentioned four positive features of value. I hope I characterize them correctly.

One is future earnings;

Two is good management;

Three is substantial assets; and

Four is preferred dividend coverage, with, as you put it, an improving picture, and also keeping in mind that there may be other positive factors.

Looking at these four positive factors and any other possible ones, which one in your mind would you give the most weight, or did you give the most weight, in arriving at what you considered the fair investment values for the preferred stocks of Engineers?

Ralph E. Badger—Cross Examination (Cont'd)

A. I would say, Mr. Kanton, that it was a very difficult thing for an expert to reduce to mathematics or to percentages the amount of weight that he gives to one factor as contrasted with another. I don't believe that is possible. After all, despite the fact that you make many computations, every expert has in mind not only all of those computations, but his general experience and other factors, and he tries to arrive, on the basis of all of those factors, at what he considers to be a fair appraisal of the stock, and I don't believe he can segregate those in his mind and say he gave 25 percent to this and 10 percent to this and 50 percent to that.

Q. I can appreciate that answer.

A. I would say that I couldn't answer your question.

Q. Let me try to rephrase it. In evaluating a preferred stock—any preferred stock—would you give more weight to future, past or present earnings?

A. Well, I would give more weight to present and future earnings, than I would to past earnings, by all means, as that is what is going to support your value.

Q. Taking dividends—you used dividends in the case of Engineers, as a limiting feature and you based that on past history. Is it possible that the dividend policy of Engineers since 1938 up to the present, and as you foresee, might also be used as a positive feature, perhaps discounting the past history of the dividends of Engineers?

A. That is true. Let me state it this way.

The period of time elapsing between a deferred dividend and a given valuation continuously lessens the importance of the past deferment. In other words, if the Company went for the next twenty-five years and we were placing a value on this stock twenty-five years hence and it had continued dividends during the twenty-five years under consideration, then the fact that it defaulted back in the middle 30's would be given little or no weight, if you see what I mean.

Ralph E. Badger—Cross Examination (Cont'd)

Q. Now, if we take two of the positive features of value, future earnings and good management, isn't it a reasonable assumption to say that more weight might be placed on future earnings rather than good management?

A. Well, if we were assured of good future earnings, we could more or less ignore the management factor.

Q. You don't think management even could overcome good future earnings in a situation like that?

A. They would have some difficulty in doing it.

Q. Well, you say,—to paraphrase your testimony up to this point, that you couldn't take any of the positive features of that value and weigh one as against the other, but you did take all the positive features of value, weighed them against the limiting features of value, and did, on an over-all judgment basis, come to the conclusion stated in your report?

A. That is exactly what I did.

Mr. Kanton: That is all, Mr. Examiner.

The Examiner: Mr. Scheetz, do you want to cross examine?

Mr. Scheetz: No questions.

The Examiner: Mr. Condon, are you ready?

Mr. Condon: I would like a two minute recess.

The Examiner: Very well.

(At this point a short recess was taken, after which the hearing was resumed.)

Mr. Condon: Mr. Examiner, at this time I offer in evidence Preferred Stockholders' Exhibit 30, which said number was reserved, and this exhibit is a part of Appendix A of Allied's Exhibit 21-2, Docket No. 54-25-1, Volume 13.

It is referred to in the report, Preferred Stockholders' Exhibit 29, and I believe leave was granted to supply a photostatic copy of this original exhibit, which I would like to have marked.

Mr. Tucker: Mr. Condon,—I have no objection.

The Examiner: It may be received in evidence as Preferred Stockholders' Exhibit No. 30.

(Preferred Stockholders' Exhibit No. 30 is received in evidence.)

[R. p. 1721] *Redirect Examination*

By Mr. Condon:

Q. Dr. Badger, in cross examination by staff counsel you were asked with respect to prices of preferred stocks in respect to call prices. You were asked whether or not the prices that you fixed on page 17 of your report, which is Preferred Stockholders' Exhibit 29, were without reference to the so-called call prices and ex the impact of Section 11 of the Act. Do you recall that testimony?

A. Yes, sir, referring to paragraph 3 on page 17.

Q. That's right. Do you know whether or not it is a fact that there are a number of preferred stocks that are selling in excess of the call prices?

A. Yes, sir.

* * * * *

[R. p. 1726] By Mr. Condon:

Q. Dr. Badger, Mr. Tucker drew your attention to the two items appearing on pages 3 and 4 of your report, that were physically stricken in ink, and you were asked to state the substance of the deletions. Do these deletions change in any way the substance of the report or affect in the slightest degree the integrity of your determination with respect to the going concern value of the three series of preferred stocks?

Mr. Tucker: I object to the form of the question. This witness is his own witness, and I think that that is a very leading question.

Mr. Condon: I am entitled on this redirect examination to ask this witness what effect, if any, those deletions had.

The Examiner: You didn't ask him that way, Mr. Condon, you asked him in a very leading way, undoubtedly. I will sustain the objection because the question was undoubtedly leading.

By Mr. Condon:

Q. Dr. Badger, do you recall these two deletions to which reference was made, on pages 3 and 4?

A. Yes, sir.

Q. Can you state whether or not those deletions changed in any way the integrity of your report or the conclusions set forth therein with respect to the fair or going concern value of the three series of preferred stock of Engineers Public Service?

Mr. Tucker: I object again. I think that in view of what has preceded that question, that again is a very leading question. Just because he said "whether or not" doesn't make any difference.

Mr. Condon: That is a perfectly proper question.

Mr. Tucker: No, no. I still think, under the circumstances, that it is a leading question, and I object to it.

Mr. Scheetz: Mr. Examiner and Mr. Condon, isn't it true that we now have of record the substance of the deleted text?

Mr. Condon: Yes, but I want to have it established from this witness, if it be the fact, that those deletions were immaterial and in no way changed or altered his conclusions, and I think I am entitled to do it.

The Examiner: Read the question.

(The question was read.)

The Examiner: I can't see that is leading. I will overrule the objection.

Mr. Tucker: The Examiner will save my exception.

The Witness: The deletions and/or changes in no way affected the conclusions contained in my report.

Ralph E. Badger—Redirect Examination (Cont'd)

By Mr. Condon:

Q. Now I ask you the same questions, with respect to the arithmetic inaccuracies drawn to your attention on page 13 of the report.

Mr. Tucker: I object, on the same ground.

The Examiner: Overruled.

Mr. Tucker: The Examiner will save my exception.

The Witness: The inaccuracies there referred to, which have been corrected for the record—I should say the correction of the inaccuracy which was made in the record in no way changes my value.

By Mr. Condon:

Q. Would you state briefly, if you will, how it came about that the deletions were made, and the mathematical inaccuracy appeared in your report?

A. Well, as to the deletions, I believe I have already discussed the methods which led—I mean the facts which led to those deletions.

As to the arithmetic inaccuracy and as to several typographical errors that have been called to my attention, those arose because of the fact that in order to meet the time schedule that was set for me in respect to this matter, I did not have a proper amount of time to recheck all of the calculations and to recheck the report in its entirety.

Q. Dr. Badger, you were asked by Mr. Tucker whether or not you had read the cross examination of Mr. Barnes with respect to the matter of alleged Government competition in the areas in and proximate to the Virginia properties, the Gulf State properties and the El Paso properties. Do you recall that line of inquiry?

A. Yes, sir.

Q. Subsequent to your examination by Mr. Tucker, have you so read that testimony of Mr. Barnes, given on cross examination, with respect to that subject matter? And if you have, will you state for the record whether it has

occasioned any change in your opinion as expressed in your report or the conclusions set forth therein?

A. It did not occasion any change.

Q. Did you read the testimony?

A. Yes, sir.

Q. By "the testimony" I mean Mr. Barnes' both direct and cross examination with respect to this matter of alleged Government competition.

A. I had previously read the direct testimony and I have since read the cross examination, and have not in any way changed my opinion as to value.

Q. Dr. Badger, under cross examination by Mr. Tucker, you were asked to make certain calculations, assumptions, adjustments, changes; you were requested to make further studies, to prepare certain exhibits; your attention was drawn to certain releases of this Commission, and you listened to the testimony of Mr. Barnes and Mr. Hastings given this afternoon. Can you state whether or not any of the data to which I have just referred, and the testimony and/or exhibits referred to, including the exhibits offered in evidence by Engineers on your cross-examination, cause you to change in any way the opinions of value expressed in your report?

A. No, sir.

Q. Did you hear Mr. Barnes testify this afternoon that the Engineers' preferred stock in January, 1946, is a low grade preferred, and so characterized it?

A. I heard him express the opinion that it was no better than a medium grade stock, and, if anything, approached a low grade preferred stock.

Q. Do you agree with that conclusion?

A. No, sir.

Q. Will you state the reason for your disagreement?

A. It is my opinion that Engineers Public Service Preferred stock is at least a medium grade preferred stock. I have gone into that at very great length as to my reasons for classifying it as a medium grade stock, and

wouldn't feel that it would be necessary to continue at the present time.

Mr. Barnes has already testified to the fact that Virginia Electric Power Company alone had a value of $65,000,000, which, as I indicated, was a value against which no prior claims existed. With all of the other factors which I have determined as a result of my study of Engineers Public Service, it would be impossible for me to characterize this in any other way than a medium grade public utility preferred stock.

Q. Dr. Badger, Mr. Tucker propounded a number of questions and asked you to make certain assumptions concerning deductions with respect to the so-called 100.5 and 107 and/or other accounts, with respect to the system of accounts, of the Federal Power Commission, and he drew your attention to certain releases of this Commission wherein certain calculations were made with respect to those adjustments. Do you have that line of inquiry in mind?

A. Yes, sir.

Q. Was there anything drawn to your attention with respect to that subject matter which causes you to change in the slightest the conclusions set forth in your report as to the fair going concern value of the series of preferred stocks of Engineers as to which you have testified?

Mr. Tucker: I object.

The Witness: No, sir.

Mr. Tucker: On the ground it is a leading question.

The Examiner: I can't see where that is leading.

Mr. Tucker: Read the question.

(The question is read.)

Mr. Tucker: I withdraw my objection.

By Mr. Condon:

Q. Dr. Badger, do you have before you the applicant's Exhibit No. 73, being these Standard and Poor's ratings

with respect to which you were interrogated on cross examination by Mr. Tucker?

A. I have them.

Q. Dr. Badger, did you make inquiry with respect to the Standard and Poor's ratings as to which you have testified, in so far as these so-called investment ratings were concerned, and their discontinuance?

A. Yes, sir.

Q. Is it or is it not a fact that the bond ratings of Standard and Poor's that were included in the Corporation and Municipal Bond Guide of September 11, 1944, were continued?

A. They were,—and to the best of my knowledge are continued today.

Q. Is it a fact that the Standard and Poor ratings discontinued only as to these investment ratings, but carried on and down to the present time have included the bond ratings that were contained in the Corporation and Municipal Bond Guide of September 11, 1944?

A. The bond ratings are continued.

Q. Would you look at the second column vertical fashion and look at the rating given to Engineers Public Service Company?

A. Yes, sir.

Q. Would you state briefly if you can when the Company gave the rating "above average" to Engineers Public Service Company, if you know?

A. I couldn't answer that question.

Q. Could you fix an appropriate time? In other words, how long prior to January, 1946?

A. I am unable to answer that question.

Q. Could you state with reasonable degree of certainty, Dr. Badger, that on the witness stand, and in connection with the preparation of your report, that you were in possession of information not possessed by Standard and Poor's—and I draw your attention specifically to the estimates of earnings of the Company for the year 1946.

Ralph E. Badger—Redirect Examination (Cont'd)

A. It is my opinion that at the time I prepared that report that this was confidential information which was in my possession but which was not in the possession of Engineers Public Service Company.

Q. Not Engineers Public Service?

A. I should say Standard and Poor's.

The Examiner: You said "confidential information" I think he is wrong about that.

Mr. Condon: I am going to develop that it was confidential, if the Examiner please. I made a statement on the record that early in January, with the consent of Mr. Tucker and Mr. Benjamin, I made that data available to Dr. Badger, and thereafter the material was received in evidence, and therefore became no longer confidential.

Mr. Tucker: That's right. But I call your attention to the fact also there were some investment banking men sitting back here day after day while this stuff was going in, and at least one member of the banking profession in New York had seen it.

Mr. Condon: We are talking about Standard and Poor's ratings.

Mr. Tucker: I don't know whether he is connected with Standard and Poor's ratings or not.

Mr. Condon: That is up to you to establish, if you feel it is necessary.

The Examiner: I think your statement was that confidential information was given to the witness prior to this hearing. It was confidential at that time. Of course, once it is offered here it is no longer confidential. This is a public hearing. Standard & Poor's may have secured it as a result of this hearing. That was the reason I called your attention to the fact.

Mr. Condon: Mr. Examiner, I draw your Honor's attention to the fact that this Exhibit 73 talks about the year-end stock guide, January, 1946. The only year-end it could be would be December 31, 1945.

The Examiner: I just wanted to clear that up, that "confidential" part, and I think you have cleared that up sufficiently for the record now.

By Mr. Condon:

Q. Would you say that the information that you had originally received as confidential information from me and that was subsequently introduced in evidence, would tend to raise or lower the rating of "above average" given as of the year-end, December 31, 1945, by Standard and Poor's, as set out on Applicant's Exhibit 73?

A. Well, I would think it would tend to improve the status of the preferred stock. As to whether or not it would raise the rating or not is another question; but it certainly would establish that this preferred stock was better, and was entitled to be classed as a higher grade stock than said stock would be classified without the possession of that information.

Mr. Condon: May I have Applicant's Exhibit 76, please, that graph?

(Discussion off the record.)

By Mr. Condon:

Q. Dr. Badger, it appears at the moment the reporter has in his office Applicant's Exhibit 76. Is it fair to say that you have in mind that particular exhibit which purports to show in solid red lines and broken red lines,—and I think in blue lines, certain graphs or charts? Do you have that exhibit in mind?

A. Yes, but not well enough to be subjected to any examination in reference to it.

Q. But you have it enough in mind to answer a few questions in a general way with respect to it?

The Examiner: Suppose you propound the questions and see whether or not the witness can answer?

Ralph E. Badger—Redirect Examination (Cont'd)

By Mr. Condon:

Q. Do you recall my asking Mr. Barnes today if he was familiar with the coefficient of correlation with respect to graphs and charts?

A. Yes.

Q. Could you define for the record the meaning of coefficient of correlation?

Mr. Tucker: Could you do it without the book?

The Witness: I could do it without the book, but I would do better with the book.

Mr. Tucker: I suggest he answer without the book.

The Examiner: Without the book.

The Witness: There are certain formulae here that I——

The Examiner: I think the question was asked of Mr. Barnes without the book. If this witness knows enough about it, I think he can answer it without the book.

Mr. Condon: If he doesn't, I will offer the book in evidence.

Mr. Tucker: I object to the book.

The Witness: Well, the coefficient of correlation is a mathematical designation of the precise extent to which two variables vary from a fixed mean together or diametrically or vary in inverse ratio, or indirectly. It is also used to measure the time lag in respect to correlation, where we are interested in a coefficient of correlation between two time series, and it is also a mathematical expression which indicates the intensity of variation of one series as contrasted with another series. That is a bit technical. We might say in general that it was a mathematical formula which gives mathematical expression to the extent to which two variable series do vary directly with each other or inversely to each other.

Q. Is it designed, Dr. Badger, to supply a modicum of accuracy in these attempted correlations, and to indicate the degree of fallacity that may follow from visualar, visible, approach to comparative charts?

Ralph E. Badger—Redirect Examination (Cont'd)

A. Yes, sir; it reduces it down to a mathematical designation and eliminates a substantial amount of error that may arise from a visual examination of the data.

Mr. Kanton: Could I hear that question and answer, please?

(The record was read.)

Mr. Tucker: Mr. Examiner, I would like to ask Mr. Condon what the last two questions have got to do with any issue that is pending before the Commission in this present proceeding?

Mr. Condon: They relate to your exhibit, Mr. Tucker, that you got in over my objection and exception.

Mr. Tucker: It hasn't anything to do with my exhibit that I can see.

Mr. Condon: You can't see a good many things about this matter.

The Examiner: Proceed, Mr. Condon.

By Mr. Condon:

Q. Is it fair to say, Dr. Badger, that a layman applying merely the ocular approach to Applicant's Exhibit 76, might be led into grievous error as to his conclusions.

Mr. Tucker: I object.

The Examiner: I will overrule the objection.

The Witness: It is a possibility.

Mr. Tucker: The Doctor isn't a layman. I don't see how he can get any construction a layman would have.

Mr. Condon: He was once a layman, Mr. Tucker.

By Mr. Condon:

Q. Dr. Badger, I hand you Applicant's Exhibit 76, with respect to which I have asked you a few preliminary questions. Do you recognize the document?

A. Yes, sir.

Q. Do you feel that the attempted correlation of the Federal Reserve Index of Production, with the $5 preferred

stock of Engineers Public Service forms any proper or fair basis for comparison?

Mr. Tucker: Now, I object. I think that is a particularly leading question, and I don't think he ought to lead this expert.

The Examiner: I can't see where that is leading.

Mr. Tucker: If that question doesn't suggest an answer to the witness, I don't know what a leading question is.

Mr. Condon: Are you afraid I am going to color this witness's judgment, or sway his opinion?

Mr. Tucker: I don't think you should ask an expert a leading question.

Mr. Condon: I don't believe it is a leading question. I think it is quite proper. I don't think it is a leading question the way Mr. Tucker says he understood it.

The Examiner: Read the question.

(The question is read.)

Mr. Tucker: I object.

The Examiner: I will overrule the objection.

Mr. Tucker: I will take an exception.

The Witness: It is my opinion that if the coefficient of correlation were computed in respect to the two series of data, to wit, the Federal Reserve Index of Production and the inverted price, as we call it, or the price on a yield basis of Engineers Public Service, that it would be relatively low. For example, a close visual inspection of these two curves indicates that in the years 1929, '30, '31 and '32, and presumably into '33 and possibly '34—the years '32 to '35 do not indicate the exact course of Engineers Public Service Preferred, because the data goes off the chart—there was a very much sharper decline in the price of Engineers Preferred than did occur in respect to the Federal Reserve index decline, and further indicates that in the year 1932 the Federal Reserve index of production started to go up and it was by inspection here approximately two years later before Engineers preferred started to rise. We find also

that in the beginning of the year 1936, Engineers Public Service started a precipitous decline that lasted until the middle of 1937. The Federal Reserve Index of Production, however, continued to advance through the entire year 1936, and did not start to decline until the year 1937, so that there was a complete lack of correlation there during that year.

Engineers Public Service started an advance in the middle of 1937, whereas the Federal Index of Production did not start its advance until 1938, so there was somewhere between six months and a year lag between the initiation of those moves, and during a portion of that time the two curves were going in diametrically opposite directions.

During the period 1938 to the middle of the year 1939 there was a correlation, but beginning in the middle of the year 1939, again we have a complete reversal in the move of Engineers Public Service Preferred and a continuous decline throughout the period mid-1939 to mid-1940, during which entire period the Federal Reserve Index of Production was advancing.

To continue, in the beginning of the year 1941, we started a very substantial decline in Engineers Public Service preferred, which decline was wide in amplitude and continued down practically to the year 1942, and during that entire time the Federal Reserve Index of Production was advancing, so we have a complete lack of correlation during that entire period, and it was not until 1942 that we again find both of the curves moving in the same direction.

So it is my impression, on the basis of that more—I shouldn't say more careful, but as careful a visual inspection as I can give it that if we were to compute mathematically the coefficient of correlation between those two series, we would find a very low degree of correlation to exist.

Mr. Condon: That is all for the time being.

The Examiner: Anything further, gentlemen?

Mr. Tucker: Yes, I have something further.

[R. p. 1742] RALPH E. BADGER,

Recross Examination

By Mr. Tucker:

Q. Did you consider, Doctor, in connection with your comparisons, American Water Works, and abandon it?

A. My recollection is that I did.

Q. Why did you abandon it?

A. I will have to refer to my records. The fact of the matter is I believe I made up a chart on American Water Works—not a chart, but computed data on it as I assembled my data. There was some reason that led me to abandon it.

Q. In the first place, both Engineers and American Water Works are holding companies, aren't they?

A. Both of them are holding companies, yes, sir.

Q. You would have something to start with there that you didn't in all of your comparisons—right?

A. Beg your pardon?

Q. I say, you would have something to start there with that would be a similarity that you did not have in all of your comparisons?

Mr. Kauton: Isn't American Water Works a sub-holding company?

Mr. Tucker: It may be sub. I don't care—it is a holding company.

The Witness: For one thing, American Water Works and Electric is a $6.00 cumulative preferred with a call price of only 110, so that under no consideration could we have there substantially in excess of 110, and that would have brought about a yield—if I could have that slide rule a moment—of 5.4 percent. That would have been the yield that would have resulted had the stock been selling at its maximum price, and it was selling at approximately its maximum price.

By Mr. Tucker:

Q. We have a 6 in this case?

A. We have other classes of stock such as the 5 percent preferred stock. If you had taken that yield of 5.4 and

applied to the 5.50 stock, you would have got a corresponding price of 102, which would be unrealistic; and if you applied the yield of 5.4 to the 5 percent stock you would have a corresponding price of approximate 93. Obviously your mathematics become confusing.

Q. Mr. Condon asked you some questions, and you made certain assumptions with respect to the amount of cash presently in the Engineers Public Service Company, the parent company. He mentioned $16,000,000 and I think you followed him and you said "Yes, $16,000,000." Where did you get the $16,000.000, or where do you get the $16,000,000 from this record?

A. I believe that was the approximate figure that was testified to by Mr. Benjamin.

Q. I hand you transcript page 1290, which contains Mr. Benjamin's testimony on cross-examination by Mr. Condon on the subject, and I will ask you if you find $16,000,000 in that testimony?

Mr. Condon: In the interest of time saving, Mr. Examiner I am perfectly willing to admit the amount of cash is $14,000,000, or $14,500,000. I may have misspoken. It was my impression that Mr. Benjamin testified that that had been supplemented somewhat. If I am in error, I am willing to confess the error.

Mr. Tucker: You say "if you are in error." I would like to show by the record that you are in error.

Mr. Condon: At that point in the record I undoubtedly am in error.

The Witness: The record refers to $14,000,000.

By Mr. Tucker:

Q. $14,000,000, or $14,500,000?

A. Well, it would be in excess of $14,000,000. As a matter of fact, apparently it would be in excess of $14,500,000.

Mr. Condon: Mr. Tucker, I would like to ask you for the record if the testimony of Mr. Benjamin was not to the effect that it was anticipated that there would be about

$1,500,000 more coming to the company from Western Public Service, and that brought it up to approximately $16,000,000, at another point in the testimony?

Mr. Tucker: No, I don't think so at all. If you think so get the point in the testimony.

On the basis of the figures here, disregarding the $14,000,000 at the end—on the basis of the figures that he quotes there, it is $14,600,000, isn't it?

Mr. Condon: I will accept that figure, and I made a mistake of $1,400,000.

The Witness: The figure as appearing in the testimony is $14,650,000. I was discussing this from listening to the testimony and I was under the impression that he had stated that an aggregate amount was or would shortly be $16,000,000. I apparently was in error by assuming that was to be added to the $14,500,000.

Mr. Condon: Did the difference of $1,400,000 make any difference whatever in your calculations?

The Witness: No, sir.

The Examiner: All right, Mr. Tucker.

Mr. Tucker: That is all.

The Examiner: Is there anything further, gentlemen?

Mr. Scheetz: Mr. Examiner, at last I have an exhibit, and that is in response to your request that I prepare a list of stockholders whom I represent and offer it as the exhibit number 1 of Home et al.

Mr. Kanton: I think the record should show, Mr. Examiner, that both Mr. Condon and Mr. Scheetz have submitted briefs on behalf of their respective preferred stock interests, in answer to the motion made by Mr. Tucker for severance, five days ago, and those motions were filed with this Commission during the business day today.

The Examiner: I understand there is no objection to your Exhibit. That will be received as Home Number 1.

(Home Exhibit No. 1 is received in evidence.)

(Discussion off the record.)

* * * * *

Hearing on February 13, 1946.

* * * * * *

[R. p. 1785] Mr. Condon: All right, Mr. Examiner. I ask leave to reserve Preferred Stockholder's Exhibit 29-A, which will be the several sheets retyped as a document and can be read in connection with Exhibit 29 as and when the Commission reads Dr. Badger's report, as a copy of his report.

The Examiner: Do you want to be a little more specific than that and refer to the specific pages you want?

(Discussion off the record.)

Mr. Condon: I have a great respect for the people who are going to read this record and read the exhibits. I have served as referee and special master many times myself and have seen cases of reports where it is necessary for a reader to wend his way through corrections and changes in a report. Now I want to set Mr. Tucker's mind at rest. I have no intention of doing anything further than having a clean copy, to use the Examiner's expression, which does nothing more than set forth the corrections that are in the minutes, and if it goes beyond that I shall expect to hear from Mr. Tucker. It will not. I see no objection to adopting the suggestion of Mr. Kanton, provided we have the time to do it, to have a 29-A constitute a complete recopy of the report, not in any way to do anything further than to make it easy to read rather than wading through laboriously 15 or 20 pages or more of testimony and checking back against the document which can only result in irritation to whomever has occasion to read it, and I don't believe that that should be visited upon us or on our side of this case in view of the limitations of time and the circumstances under which we were compelled to have that report prepared. Now, I can see no harm in it, and I ask that a 29-A number be reserved for that purpose. I have no objection, giving all the time to counsel to check it and if there be any inaccuracies in it that they be drawn to our attention and we will promptly correct them.

Mr. Scheetz: In that connection, Mr. Examiner, it will be helpful if the revised copy would show the points at which the corrections were made and perhaps the page reference in the notes of testimony to support it so that in reading it one doesn't have to compare it with the exhibit 29.

Mr. Tucker: That's what I was going to suggest.

Mr. Condon: We will undertake to do that.

The Examiner: I understand then there will be no objection to it under those circumstances, Mr. Tucker?

Mr. Tucker: That's right.

The Examiner: Then we will reserve Preferred Stock holder's Exhibit Number 29-A for that purpose with the understanding that after a copy of this revised report has been submitted to Mr. Tucker and to Commission counsel and approved by them, and to Mr. Scheetz, that it may be incorporated in the record without reopening the hearing.

Is that agreeable to everybody?

Mr. Tucker: That is agreeable to me.

The Examiner: That will be done.

(Preferred Stockholder's Exhibit 29-A was reserved as noted.)

(Discussion off the record.)

• • • • •

(Hearing closed at p. 1815.)

ORAL ARGUMENTS BEFORE THE SECURITIES AND EXCHANGE COMMISSION.

Hearing on September 5, 1946.

BEFORE THE

SECURITIES AND EXCHANGE COMMISSION

IN THE MATTERS OF:	
ENGINEERS PUBLIC SERVICE COMPANY	File No. 54-132
EL PASO ELECTRIC COMPANY	File No. 70-1149
GULF STATES UTILITIES COMPANY	File No. 70-1150

Hearing Rooms A, B and C,
Securities and Exchange Commission Bldg.,
Philadelphia, Pa.,
Thursday, September 5, 1946.

Met, pursuant to notice at 11:00 o'clock a.m.

Before:

Commissioners JAMES J. CAFFREY, Chairman,
RICHARD B. MCENTIRE,
EDWARD M. HANRAHAN.

Appearances:

BERNARD S. KANTON, on behalf of the Securities and Exchange Commission.

WILLIAM E. TUCKER, of Mudge, Stern, Williams & Tucker, 20 Pine Street, New York, N. Y., on behalf of the Applicants.

LAWRENCE R. CONDON, by ARTHUR H. CLEPHANE, on behalf of Thomas W. Streeter, Columbian National Life Insurance Company, and others.

FRANCIS H. SCHEETZ, of Evans, Bayard & Frick, 1335 Land Title Building, Philadelphia, Pa., on behalf of Home Insurance Company, et al.

PROCEEDINGS

The Chairman: This is the matter of Engineers Public Service Company.

We are told that three counsel have requested an hour apiece. We would appreciate it if you could keep it certainly within the hour and, if possible, cut it down as much as you can for us.

I understand that Mr. Tucker is to be the first in order.

Two of our Commissioners are unavoidably absent. If there is no objection, upon condition that they read the transcript of this argument, they will participate in the decision of the case.

Is there any objection?

There is no objection.

Argument of William E. Tucker

Mr. Tucker: If the Commission please, I would like to divide my time, if I may, since I have the burden here. I will give three-quarters of an hour for my main argument, and fifteen minutes for rebuttal.

The Chairman: That will be all right.

Mr. Tucker: At the outset I believe that I should outline to you briefly the plan which is the subject-matter of this application.

Engineers has formally disposed of many of its properties in compliance with Section 11(b)(1) and with the successive orders of the Commission entered for the purpose of effectuating that section as applied to Engineers.

As a result of those dispositions, Engineers now finds itself with only three public utility subsidiaries, namely, Virginia Electric and Power Company operating in Virginia, West Virginia and North Carolina; Gulf States Utilities Company operating in Texas and Louisiana; and El Paso Electric Company operating in Texas and New

Mexico. These subsidiaries are called in our brief and will be called in this argument Virginia, Gulf States and El Paso, respectively.

Of these three subsidiaries, the order of this Commission dated September 16, 1942, requires Engineers to divest itself of its interest in Gulf States and El Paso and this plan is filed for the purpose, among others, of accomplishing such divestment.

Engineers corporate structure could hardly be simpler. It has outstanding no bonds or debentures and no bank debt. Its only outstanding securities consist of three series of preferred stock commonly known as $5, $5.50 and $6 dividend preferred stock, and common stock.

The plan is divided for procedural purposes into two parts.

The provisions of Part I briefly stated are as follows:

First we have the divestment by Engineers of its interest in Gulf States and El Paso.

Engineers is to divest itself of Gulf States through the issuance by Engineers of warrants to its common stockholders permitting them to acquire on a share for share basis the Gulf States common stock, as reclassified for such purpose, at $11.50 per share.

The common stock of El Paso is to be distributed by Engineers as a dividend in partial liquidation to the common stockholders of Engineers on the basis, also after reclassification, of ½ of a share of El Paso for each 1 share of common stock of Engineers held.

The retirement of the issued and outstanding shares of preferred stock is, of course, a prerequisite to this action. The question whether or not any additional amount is payable to such stockholders, who are to receive $100 per share and accrued dividends, is to be determined under Part II of the plan, the provisions of which I will explain later.

The funds necessary to accomplish such retirement will be derived from three sources, (1) $15,500,000 of cash which it is estimated will be in the treasury of Engineers on

Argument of William E. Tucker (Cont'd)

October 1, 1946; (2) approximately $22,000,000 derived from the exercise from the warrants for Gulf States common stock; and (3) from the proceeds of the bank loan for $1,500,000 proposed to be obtained by Engineers from The Chase National Bank of the City of New York at an interest rate of 1½%. It is proposed to pay off this loan from dividends received by Engineers from Virginia and on the basis of current dividends from that source this loan should be paid off in full by July 1, 1947. Accordingly, this loan may properly be viewed as a relatively small and short-term bank loan.

Then comes the dissolution of Engineers and the distribution in connection therewith to the common stockholders of Engineers of as many as possible of the shares of common stock of Virginia owned by Engineers.

The plan provides that within sixty days from the effective date of Part I, that is, from the mailing of the warrants for Gulf States stock to the Engineers common stockholders, Engineers shall file with the Secretary of State of the State of Delaware a Certificate of Dissolution. It is provided that the filing of that certificate shall effect such dissolution and thereafter Engineers will wind up its affairs. To that end the Plan provides that Engineers shall be continued as a body corporate for the purpose and for the term specified under Section 42 of the General Corporation Laws of the State of Delaware, that is, for 3 years unless at the end of the period there shall be unsettled litigation. The Plan also provides that the persons who at the time shall be directors of Engineers shall become the trustees in dissolution to wind up Engineers' affairs and distribute as many shares as possible of Virginia held by Engineers to the common stockholders of Engineers in liquidation, after, of course, the debts and liabilities of Engineers shall have been settled and paid. Engineers is a Delaware corporation and this suggested procedure is the ordinary and usual procedure for the dissolution of such a corporation.

If it shall be determined that some amount in addition to $100 per share and accrued dividends is to be paid to the preferred stockholders, it is contemplated that the trustees in liquidation will borrow the funds necessary to pay such amount and that this loan as well as the loan previously referred to will be paid off by the trustees from dividends received by them on the common stock of Virginia. It is estimated on the basis of current earnings that this second loan, if one becomes necessary, can in that manner be paid off by October 1, 1948. Accordingly, this second loan also will be of short duration.

Incidentally, the Plan provides for the cancellation of the contracts with the service company, Epsco, Inc., which is the mutual service organization which has serviced Engineers, and since the carrying out of these contracts is its only business, the cancellation of those contracts will terminate Epsco's business career.

Now we will come to Part II of the Plan.

Part II of the Plan, included therein as a separate part merely for procedural purposes, provides that Engineers shall pay to its preferred stockholders no amount in addition to $100 per share plus accrued dividends, but that if the Commission shall believe it to be fair and equitable that Engineers should pay to its preferred stockholders any such additional amount and shall make any findings or orders to that effect specifying such amount, then this part of the plan shall be automatically amended to provide for the payment by Engineers of such additional amount "subject, however, to the fact that Engineers shall have the right to contest such findings or orders both before the Commission and in the courts".

Part II was inserted in the plan merely for the purpose of mechanically permitting the severance of the two parts administratively so that Part I could become effective and carried out if possible while the additional amount, if any, payable to the preferred stockholders was being finally determined. Engineers does not believe the form of Part II

is of particular importance. If the Commission finds it objectionable in any respect there is no reason why it should not be changed, just so Engineers shall have the right to contest any order awarding the preferred stockholders more than $100 per share plus accrued dividends.

I think the only real substantive question in this case is the amount which should be paid to the preferred stockholders. We believe that the plan is fair and equitable when it provides for the payment to those preferred stockholders of $100 and accrued dividends and no more.

It is the position of Engineers that such payment to the preferred stockholders is a fair arrangement to both the preferred and common stockholders, and it is the position of the Staff and counsel representing in this case the shares of preferred stock, that it is not.

Counsel for the Staff and counsel for the preferred stockholders contend that the preferred stockholders should receive what this record shows and Engineers admits to be the present investment value of such preferred stock viewed apart from the Act as limited by the ceiling imposed on such investment value by the call prices of $105 for the $5 stock and $110 for the $5.50 and $6 stock.

We believe that at the basis of this argument is the question whether Engineers liquidation is voluntary or involuntary. We take the position that it is voluntary.

It seems to us important to determine that question since in this particular case—and I think this is the first time this kind of a case has come before the Commission—the charter provides that for an involuntary liquidation the payment shall be $100 and accrued dividends, while for a voluntary liquidation there shall be added the call premiums, or $5 for the $5 stock and $10 for the $5.50 and $6 stock.

I won't take time to read the charter provision, but I believe that is a fair statement of it, and it is set forth in my brief as well as in the record.

So that it may be clearly understood and to avoid any possible misunderstanding of Engineers' position in this case, I want to say at the outset that we are not urging that it would be a violation of Engineers constitutional rights unless the involuntary liquidation preference is strictly carried out. On the contrary, we are taking the position that on all the facts shown by this record, the fair and equitable standard set up in Section 11(e) of the law, which is applicable to this Plan, requires that the preferred stockholders shall receive no more than $100 per share and accrued dividends.

That the liquidation of Engineers here proposed is involuntary seems to us to be perfectly plain. Engineers would not be dissolving if Section 11 of the Act had not been passed. It would have continued into the future for many years. In fact it is difficult to imagine any likely circumstance or set of circumstances which would have caused its liquidation at any time. Thus, Section 11 of the Act is the cause without which the liquidation would not have happened. Thus it is a liquidation forced by the Act and such a liquidation cannot be other than involuntary.

Under Section 11 and this Commission's various orders thereunder, Engineers has already disposed of five of its public utility properties and a number of non-utility properties. After these dispositions it finds itself with only three subsidiaries. Two of these, Gulf States and El Paso, were ordered divested by the September 16, 1942 order, and when these are divested, Engineers will be left with Virginia alone. Thus the purpose of the Engineers organization has by law been frustrated. This frustration is so complete that a member of the Staff of this Commission argued in a brief filed with this Commission in the Section 11(b) (1) case that the maintenance of Engineers as a holding company over Virginia alone would be an "economic monstrosity". The continuation of Engineers permanently as a holding company over Virginia alone not only would serve no useful purpose whatsoever but this record shows

that the increment costs of such continuance would be $180,100 per year—too large an amount of money per year to spend for the maintenance of a useless holding company. The Staff was right. Such continuance would be an "economic monstrosity".

The conclusion that the liquidation of Engineers under these circumstances is involuntary is supported we believe by a long series of opinions of this Commission and of the courts in which it has been held that steps taken under the compulsion of the Act must be deemed to be involuntary. A considerable number of such cases are cited in our brief and I will not take the time to discuss them in detail. The conclusion which we have drawn therefrom is certainly sound.

We do not believe there was anything in the Otis case which requires the payment to preferred stockholders of more than $100 per share and accrued dividends.

The Commission in the reargument of the United case on August 6th heard a lot about the Otis case and the discussions got to be, I thought, somewhat philosophical. However, to show that the language of the Supreme Court in the Otis case to the effect that the dissolution there involved was not the kind of a liquidation envisaged by the charter and that it was not an "anticipated liquidation" within the meaning of the charter provision relating to dissolution, has no application in this Engineers case, needs no philosophical discussion. It is only necessary to point out that the kind of a liquidation involved in this case is not the kind of a liquidation involved in the Otis case as shown by the express language of the majority opinion in that case. In the Otis case the dissolution was simply an internal reorganization within a holding company system, and when it was accomplished, a holding company system would still remain in existence with no real break in the continuity of the enterprise. That dissolution was so expressly described in the majority opinion, page 628, as follows:

> " * * * As Railways was the only company in the tier below Power of the holding company system, it would become by the dissolution of Power the top holding company and Power's preferred and common stockholders, by the distribution to them of all of Railway's common would have in the aggregate the same rights in Railways and in the holding company system that Power had. * * * ".

Again, in that opinion the Supreme Court expressly limited the language with respect to the liquidation not being "envisaged by the charter provisions" to the dissolution of the particular company involved in that case. I quote from page 631 as follows:

> " * * * The exercise of legislative power by Congress through 11 (b) (2) to accomplish simplification as a matter of public policy and the Commission's administration of the Act by dissolution of this particular company results in a type of liquidation which is entirely distinct from the 'liquidation of the corporation, whether voluntary or involuntary' envisaged by the charter provisions of Power for preferences to the senior stock."

Thus by its express language the Court limited the application of the Otis case to the kind of a liquidation there involved which was obviously not a final determination and elimination of a holding company system as is the case here. In this Engineers case the liquidation is not the liquidation of one holding company in a series of holding companies in a system, leaving in existence in the system thereafter one or more holding companies. When the proposed liquidation of Engineers is completed, not only does the corporate existence of Engineers finally end but it also results in the termination of the Engineers holding company system itself.

Thus, the common stockholders of Engineers when the liquidation is completed will not have a continuing interest in the business for which Engineers was organized. The enterprise will have ceased to exist and all that will be left to such stockholders will be some of the "bricks" which had previously constituted the original structure. That original structure will have been entirely and ultimately destroyed. No holding company will be left.

Thus, it seems to Engineers that we can in this case start with the safe assumption that this Engineers liquidation is involuntary and that the involuntary charter provision is one of the bundle of rights which must be taken into consideration in the determination of this case. Then comes the question how much weight should be given to the contract in this case. It is our position that under the facts here it should equitably be given controlling weight.

I have not the time on this oral argument to undertake any full explanation of the Otis case or of the serious disagreement which has arisen as to what the Supreme Court there said and did. Personally, although I admit of some difficulty in clearly following some of the reasoning of the majority, I have no serious quarrel with the result which the majority arrived at under the facts of that particular case. I think it is essential, however, in interpreting that opinion and attempting to reason from it to this and other cases, that the facts of that case be clearly borne in mind. In that connection I do desire to point out, as forcefully as I can, that there are at least four substantial differences between the facts which existed in the Otis case and the facts which exist in this Engineers case and they are as follows:

(1) Here there are admittedly more than sufficient assets to pay the preferred stock its involuntary liquidation preference and leave for the common stock a substantial equity, which was not true in the Otis case. This difference clearly means that we do not have in this case the principal problem which faced the Supreme Court in the Otis

case, namely, the protection of the legitimate investment interest of the common stock in a situation where if the full liquidation preference were given to the preferred stock, the common stock would be wiped out.

That problem is not here. That is the problem that troubled the Supreme Court in the Otis case, in my opinion.

This certainly is a very substantial difference between the Engineers case and the Otis case.

Second, here the liquidation involved is a final liquidation after which the holding company system will be completely eliminated, while in the Otis case the liquidation was merely of one company in a holding company system, with a holding company continuing after the liquidation and with no substantial break in the enterprise as a going concern. This difference I have already fully discussed.

Third, there was evidence of substantial losses already imposed and to be imposed by the impact of Section 11 which will fall solely on the common stock if the preferred stock is given more than the amount provided in the charter to be paid on involuntary liquidation.

Fourth, here there was also evidence that if it were not for the impact of the Act the preferred stock could have been refinanced with a saving to the common stock having a capitalized value of $2,500,000.

These third and fourth differences between this case and the Otis case I would now like to take up in some detail.

The Engineers Company at the time the Act was passed had an option to purchase 75% of the stock of El Paso Natural Gas Company. Because of the fear which I expressed to the management that the acquisition of the stock under option would be a violation of the Act, they never did acquire such stock but assigned their rights under the option to a trustee under a trust instrument which directed him to acquire the stock but to sell it; and the stock was thus acquired and sold. Measured in terms of the difference between present market values and the market values at the time of such sales, there is even now a loss of about

$4,000,000. Should this loss be borne entirely by the common stock of this company and not shared in by the preferred stock?

Again, Engineers invested $34,000,000 in the stock of Puget Sound Power & Light Company. It divested its interest in that stock under compulsion of an order of this Commission and received for that large investment only $750,000. While it is impossible to state the value of the common stock of Puget without a complete analysis of that company, the market action of the stock shows that the value of that property has greatly increased since that divestment in 1943, so what has happened is that Engineers has lost the opportunity to recoup its investment or some substantial part of it. Should the loss of that opportunity be borne entirely by the common stock and not shared as well by the preferred stock?

Again, the impact of the Act has radically changed the character of the company which the stockholders hold and when this Plan is carried out will further alter that nature. At the time of the passage of the Act Engineers had eight properties located in fifteen States. Now it has three properties only and the Plan contemplates their divestment also. All of this has been caused by the Act. Thus Engineers as an enterprise will cease to exist, it has lost the substantial advantage of diversity, it has lost the savings from combined purchases, sales development and other services and it has lost the leverage from the inclusion of $40,000,000 of preferred stock in its capital structure.

Again, if it were not for the impact of the Act the Engineers preferred stock, the record here shows, would be refinanced on a 4.6% yield basis and would result in a net saving in dividends to the common stock of about $166,000 per year. This saving capitalized at 15 times, a capitalization figure used by Dr. Badger, a witness for the preferred stockholders in this case, would increase the common stock in value by $2,500,000. The Act takes this value away from the common stock. Are the preferred stockholders to have no share in that loss?

While I am on this subject I would like to quote briefly from Mr. Condon's reply brief in this case. On that point he says:

> "It is just nonsense to say that payment of the call prices would place any 'burden' on the common stockholders and the calculation on pages 13-14 with respect to the alleged loss of $2,500,000 from inability to refinance preferred stock are actually ludicrous. Using the same argument, the preferred stockholders could contend that the common stockholders are making $29,286,140 by retiring the preferred. The present preferred dividend requirements are $2,119,076. No more preferred dividends will have to be paid after the stock is retired. This saving capitalized at 15 times amounts to $31,786,140. Deducting the 'loss' of $2,500,000, which Mr. Tucker is worrying about, means that the common stockholders have a net gain of $29,286,140 from the effects of the plan."

What his mathematics overlooks is the cold fact that it would cost more than $39,000,000 to save this $29,000,000.

The fact cannot be overlooked in this case that if the preferred stock is paid on any theory, $105 for the $5 stock and $110 for the $5.50 and $6 stock, the preferred stockholders will be receiving the most that they could possibly have received under any conditions in view of the voluntary call prices. Thus, if the effect of the Act on the preferred stockholders in this case is ignored, it results in leaving the preferred stockholders unscathed and scot-free from the effect of the Act, while the the common stockholders alone are left to bear all the losses and all the dislocations caused by its impact. We say such a result would be inequitable and unfair in the extreme.

Under these circumstances, the majority opinion in the Otis case clearly permits and the facts in this Engineers case obviously require that here the equitable emphasis be

placed on the involuntary liquidation preference of the preferred stock and not its so-called present investment value, ex the Act.

I have somewhat the same feeling about this ex the Act business Commissioner Healy has. I feel it is all-prevailing, it is ever-present, and to view the situation ex the Act is to indulge in one of the good old-fashioned common law fixtures that they used to indulge in many years ago in order to arrive at results. That is not equitable.

The involuntary liquidation preference should be carried out unless there are substantial countervailing equities. Here is a case where the equities are all the other way —in favor of the common stock.

Before closing this part of my argument which has to do with the award to the preferred stockholders, I would like to point out the inequity of placing much emphasis on the so-called present investment value of the preferred stock, ex the Act. That investment value has no such permanence as to entitle it to any considerable weight. Market values are the resultant of two variables—one, the cost of money and two, the risk factor determined largely from earnings. A holding company preferred stock, although a fixed income stock, by its very nature is inherently about the most volatile fixed income security in the market. Dr. Badger's claim in his testimony that present market values of preferred stocks are "as far as one can humanly predict, a permanent level" is extravagant and unrealistic.

Holding company preferred stocks are at the moment close to their all-time peak and under the circumstances of this case, since the premiums are a ceiling on the market values, the values of those preferred stocks have only one way to go and that is downward; and that they will go down and go down considerably is inevitable. That result is only a matter of time; and it may be soon. We have always had periodical depressions and we undoubtedly will continue to have them in the future. In fact, the Honorable Henry A. Wallace, Secretary of the Department of Commerce of the

United States, recently predicted another depression within two years and the Brookings Institute has recently forecasted an increase in the cost of money.

Under these circumstances, if in this case any considerable weight is to be given to current market values of the Engineers preferred stock ex the Act, that value must be leveled off and put more in line with the inevitable course of such values in the future.

In this connection we refer to a foot-note at page 16 of the Engineers' brief which shows that none of the preferred stocks were issued on a basis higher than $100, that none of them ever sold above $100 in the market until the year 1944 except for brief periods when conversion privileges and common stock purchase warrants induced higher prices. That during the years 1933 and 1934 all of the series of preferred stock sold in the market around $10 to $15 per share to $30 per share, and that as late as 1942 all three series sold in the forties, and that the average market price of all of the series during the whole period the stock has been outstanding is actually in the sixties. If, as the majority opinion in the Supreme Court said it is not intended that the operation of the Act shall result in a windfall to any class of stockholders, these preferred stockholders cannot be awarded more than $100 and accrued dividends per share.

Furthermore, I would like to point out that it is my firm belief that, as applied to such a case as here involved, the investment theory which a majority of this Commission, as previously constituted, seems to have adopted is in my opinion a one way street, and I would like to give an illustration to show what I mean. Suppose the present Engineers preferred had been put out on a 4.6% basis on which basis the evidence in this case shows that it now could be refinanced. Suppose thereafter that the cost of money rose to 6% with no change in the risk factor. The investment value of that preferred stock would then be $77 per share. If such a liquidation as is now proposed were to

take place under those conditions, and there were sufficient assets to pay the preferred stock the involuntary liquidation price of $100, plus accrued dividends, and still leave a substantial equity for the common stock, does anyone believe that the preferred stock under such conditions would be awarded only its then investment value of $77 per share? Personally I do not. It seems much more probable to me that the preferred stock would be awarded, instead, the involuntary liquidation preference of $100. If this is so, then certainly there is something wrong with the present investment rule. It will not work both ways. The fact is that what the preferred stock is entitled to receive in this case is its involuntary preference of $100 and accrued dividends. That is its claim and that and no more should the preferred stock in this case be awarded.

I just have a few minutes to take up two questions that have been raised in the opposition brief. One is the suggested escrow.

The Staff brief suggests that an escrow fund should be set up to cover the amount, if any, in addition to $100 per share and accrued dividends which should be awarded to the preferred stock and for fees and expenses.

Engineers does not believe the additional expense involved in such an escrow is either necessary or justifiable. The plan proposes that the common stock of Virginia would be retained until the unfinished business of Engineers is concluded, including the payment of the additional amount, if any, to the preferred stockholders. That common stock, the record shows, at the lowest estimate has a value of $57,000,000 and at the highest estimate has a value of $88,000,000. Mr. Barnes, the President of Engineers, who perhaps knows more about its value than anybody else, believes it has a value of around $65,000,000. We are here dealing with relatively small amounts of money chargeable against this large value. The escrow fund could be raised by increasing the subscription price of the Gulf States common stock under the warrants unless

the market continues as at present, by selling some of the shares of common stock of Virginia or by borrowing funds from a bank. The increase in the subscription price of the Gulf States as a remedy for this situation may not now be available. If the money were borrowed from a bank, interest would be payable while the fund remained idle. If the money were raised by the sale of some shares of common stock of Virginia, it would take that much away from the interest of the common stockholders in Virginia and would subject them to additional taxes. Furthermore, if as much as 5% of such Virginia stock were sold, Engineers ownership of voting securities would be reduced below 95%, which would prevent the filing of consolidated tax returns and subject the dividends on the remaining common stock of Virginia owned by Engineers to unnecessary taxes. Another objection to the sale of shares of Virginia common stock is that there is no seasoned market for that stock. It is common knowledge that an unseasoned security is hard to value and is unlikely to sell at its full value. An example of this is the recent Dayton Power & Light issue which was offered to the public at 36. Yesterday it sold as low as 30¼. The point here is if the Virginia common is distributed to the Engineers' common stockholders they can, if they wish to sell the stock, wait for a seasoned market and not take the sacrifice involved in the sale of an unseasoned stock.

If it be true, as we believe, that the escrow is unnecessary, also the expenses of the depositary and of printing escrow receipts would be wasted.

With reference to the suggestion which the Staff makes for the issuance of transferable certificates of beneficial interest, it seems clear to us that since these certificates merely represent an interest in a lawsuit, they would be nothing but a speculation and are not the kind of a security which should be transferable or traded in on the open market. If an escrow is to be established, we certainly do not believe that the interest therein should be represented by

transferable receipts under these conditions. The simplest and most economical way to handle the claims to the escrow, if there is to be one, would be to have it payable to the holders of record of the preferred stock at the time the preferred stock is surrendered for cancellation and receives $100 per share and accrued dividends, and not represented by transferable certificates.

However, Engineers is not inclined to believe that the question of escrow or no escrow is a vital matter and if the Commission disagrees with Engineers on this point, we will be pleased to discuss the details of an escrow arrangement with the Staff and other counsel. Engineers urges, however, that even if such an escrow arrangement is deemed essential by the Commission, the Commission give consideration to the placing of a suitable number of shares of common stock of Virginia in escrow rather than requiring the raising of cash which would remain idle until the final determination of the amount, if any, of the additional payment to be made to the preferred stock.

We argue in our brief, and I won't take time to argue it here in detail, that this Commission under this Act has no authority or jurisdiction over the fees and expenses which Engineers does not voluntarily assume. It has been suggested here in the opposition briefs that this plan is not fair because it does not contain such provision. It is our legal view that the interjection by the Commission of the payment of fees and expenses not voluntarily assumed by Engineers as a condition to the plan would be beyond the power of the Commission.

Lastly, with respect to the bank loan, it is suggested in the Staff brief that the bank loans which the plan contemplates should be eliminated by increasing the subscription price of the Gulf States common stock under the warrants from $11.50 per share to $14 per share. Under present conditions—and I refer to recent action in Wall Street—this would be doubtful of success, even if it were feasible.

Argument of William E. Tucker (Cont'd)

It is the position of Engineers that the common stockholders of Engineers should not be asked to pay more than $11.50 per share for the Gulf States stock under the warrants. The plan contemplates that the first loan which has now been reduced to $1,500,000 and the second loan of say $3,700,000 if fees and expenses are to be included therein, are entirely reasonable. On the basis of the current Virginia dividend rate, the loan of $1,500,000 can be paid off by July 1, 1947, and the second loan of $3,700,000 can be paid off by about October 1, 1948. These are certainly relatively short term obligations and it seems to Engineers that it is within the bounds of reasonableness for it to carry out that part of the plan without interference. Furthermore, if the bank loans are to be eliminated in the manner suggested, we have developed in our brief the additional tax burdens which will be imposed on the stockholders through the payment of Virginia dividends directly to them instead of their application to the payment of the bank loan. It is there shown that if the weighted average individual surtax net income of all of the common stockholders of Engineers is between $4,000 and $6,000, they would in the aggregate by this method be required to pay additional Federal taxes of about $1,284,000, and that if 90% averaged between $4,000 and $6,000 and 10% averaged between $100,000 and $150,000, the aggregate additional tax would be about $1,595,000. We say to the Commission that the imposition of that additional tax burden on the common stockholders, simply to avoid paying these reasonably short term bank loans, would be unfortunate to say the least. Furthermore, the objective apparently of the Staff in suggesting the elimination of the bank loan is apparently to speed up the ultimate distribution of the common stock of Virginia to the Engineers stockholders in liquidation. If this be the purpose of the Staff, as we point out in our brief, it is not likely to be accomplished in any event. This for the reason that no substantial distribution of Virginia common stock can be made until the tax and other liabilities of

Engineers are settled. There has been no audit of the complicated Engineers consolidated tax picture since 1943 and it seems clear that without the assumption by the directors of a personal liability for such taxes, no substantial distribution of the Virginia stock can be made until those matters are settled. It is unlikely that they will be settled before the bank loans are paid off by the application thereto of dividends from Virginia. Accordingly, the elimination of the bank loans would appear to serve no useful purpose whatsoever, and to carry with it heavy tax burdens as I have already shown.

I thank you.

The Chairman: We will now hear from counsel for the Staff.

ARGUMENT OF BERNARD S. KANTON

Mr. Kanton: May it please the Commission, Mr. Tucker's argument this morning would have us believe that there is only one problem or one issue in this case, namely, the amount to be paid to the preferred stockholders, whether $100 or $105 or $110 per share.

Our brief points out that the Staff considers that there are two other important issues in this case equally as important with the payment of the preferred stockholders, and they are the proposed bank loan and trusteeship, which we feel are not necessary nor fair and equitable, and the other problem which Mr. Tucker briefly touched on, the payment of fees and expenses to participating counsel in this proceeding.

It is the purpose of the Staff this morning to cover two of these three issues, namely, the proposed bank loan and the trusteeship as set up in the plan and the proposed payment of $100 per share to the preferred stockholders.

Regarding the bank loan and trusteeship, our brief outlines the following objections that the Staff finds with this bank loan and trusteeship. We feel that if it is approved,

Engineers or the trusteeship would have the burden of paying continuing taxes, operating expenses, and interest on the bank loan, which, as Mr. Tucker stated this morning, are admittedly useless expenses and of no benefit to the Engineers system, that is the holding company system.

Furthermore, it would continue a holding company organization which serves no economic purpose.

Third, such holding company organization is to be preserved for the sole purpose of thwarting the normal corporate function of declaring dividend income.

Last, but not least, it disfranchises the common stockholders of Engineers for an indefinite period and cuts off their control of Virginia.

In reading Mr. Tucker's brief and the record we hear the statement that it perhaps may take two or three years to wind up Engineers after its formal liquidation and dissolvement. But there is an important statement appearing on page 35 of Mr. Tucker's brief where he says:

> "The suggestion to eliminate the relatively small bank loan loses its force when it is realized that it will be necessary to defer the final distribution of the Virginia stock * * * until well after October 1, 1948."

So we do not know if it is going to be two years, three years, five years, or more.

Of course, he leaves us with the inference that it may only take a year or two years or three years, but we will get to that subject later as to the novel tax consequences that this proposed plan is to bring about.

On an examination of the record the Staff finds that this entire plan was considered by the Board of Directors in terms of tax consequences to the common stockholders of Engineers. We point out specifically in our brief the pages that we base that statement on.

If we would turn now to page 31 of Mr. Tucker's brief, in arguing against the proposal presented by Mr. Condon that the preferred stockholders would be at a disadvantage

who held no common stock at the time of the exchange of the preferred for the Gulf States common, he says at the bottom of that page:

> "The tax advantage mentioned is not an incident of the Plan but rather a result of the income tax law."

And he quotes the Commission's opinion on the New England Power Company case.

He goes on to say:

> "That law notoriously does not apply in the same manner to everyone. The effect and amount of the tax depends upon the individual circumstances of the taxpayer as to tax cost, the nature of the disposition, etc. The Plan is not responsible for those variations."

The Staff concurs with that.

However, when Mr. Tucker is trying to sustain his position of the bank loan and the trusteeship on page 37, when he again mentions the tax consequences, and he points out if the Staff's suggestions were followed:

> "this would result in imposing upon the Engineers' stockholders an additional income tax liability which would not exist if the normal procedure were followed and Engineers paid off the senior stock from its own funds,"

and he goes on to say:

> "Since consolidated returns would be filed, Engineers would pay no income tax upon such dividends."

He sums this statement up by saying:

> "Certainly that plan should be adopted which does not impose extra burdens in the aggregate on the common stockholders."

From reading the statements on page 37 and the brief and the record it becomes obvious that Mr. Tucker's consideration, perhaps the management, is that their entire plan was considered in terms of tax consequences to the common stockholders, the large common stockholders, not the consequences to the system which would comprise Engineers and Virginia or the preferred stockholders who are to get out of the picture, or perhaps even the small common stockholders, but just the large common stockholders.

So when Mr. Tucker says on page 31 that:

> "The tax advantage mentioned is not an incident of the Plan but rather a result of the income tax law"

we feel that it becomes apparent that instead of tax consequences being an incident of this Plan, the Plan is really an incident of tax consequences to large common stockholders.

On pages 33 and 34 of his brief Mr. Tucker refers to our Cities Service case, No. 4944, as illustrative of a case where this Commission permitted a bank loan as an appropriate device for retiring senior securities.

Mr. Tucker could have cited other cases where we have also permitted bank loans to retire senior securities, but in all these cases, including the Cities Service case, a bank loan did not unnecessarily delay the final elimination of the holding company in question, because in each one of those cases there were other Section 11(b) problems to be resolved by the company and this Commission.

Here, instead, the bank loan and the trusteeship creates delay in eliminating an unnecessary holding company, and furthermore continues the payment of useless expenditures which Mr. Tucker says would happen if a holding company organization were continued just over Virginia.

There is no doubt in our minds that we would have a holding company as such over Virginia because the dominant characteristic of a holding company is the ownership of securities where control is exercised, and in this particu-

lar case where we would have a holding company formed, whether you call it Engineers, a trusteeship, or association for tax purposes, we cannot determine at this time when it would come to an end.

The Staff in its brief had this question particularly in mind when it referred to past decisions of the Commission under the issues in this case, when we stated on the top of page 15:

> "it is equally clear that a plan cannot be found 'necessary' merely because it is one conceivably available method of bringing about the result. A plan must be such that it has real promise of bringing about the result competently and expeditiously. In other words, the action to be taken should be such as will achieve this result most effectively and quickly."

We do not feel that the proposed bank loan and trusteeship as proposed by Engineers will bring about an effective and expeditious termination of a holding company over a single operating company which Mr. Tucker quoted to be a situation that would call for the words "economic monstrosity".

In our brief the Staff suggested the raising of the warrants price to $14 a share, and it was Engineers' position, and still is, that such increase would make the common stockholders of Engineers lose their position in the Engineers enterprises as now constituted, meaning that they would lose El Paso, perhaps, Gulf States, and/or Virginia.

Section 11(e) envisages voluntary plans. This plan is a voluntary plan filed under Section 11(e). The management could have proposed other plans as the record well indicates. Instead of paying out the preferred stockholders in cash, they could have given them part cash and part tickets, meaning some of the securities in the operating companies. The Staff submits that the Plan as proposed provided for the issuance of warrants as an appropriate method, but it is emphasized that the method was chosen by Engineers.

Argument of Bernard S. Kanton (Cont'd)

The general characteristics of a warrant offer, one of which is to permit a common stockholder to invest more cash in order to maintain his interest in the enterprise, and the Commission has found in many cases that as long as the common stockholder can transfer these warrant rights he feels he is being treated fairly. We point that out in our brief. So if an Engineers common stockholder wished to dispose of his interest in Gulf States instead of exercising his warrant, he could sell his warrant rights, and that position is left available to him under the Plan. If he only wanted to exercise some and raise cash by the selling of some warrant rights, he can. The thing to be borne in mind is that this proposal is primarily a voluntary one, made by the management of Engineers, which we submit is an inappropriate one.

However, Engineers argues that the raising of the warrant price of $2.50, for every 50 cents you raise the warrant price, being outstanding 2,000,000 shares of Engineers common, you get approximately $1,000,000, so for $2.50 you get $500,000. But they say, if you raise it $2.50 the common stockholder will lose his interest in the Engineers enterprises as presently constituted. There is nothing in the record to indicate that a $14 warrant price would force any one or several stockholders to dispose of their interest any more than the same stockholder would sell at $11.50. It is a very small increase in the warrant price. However, the record does show that the raising of a subscription price to $14 would permit Engineers to forego a bank loan.

Mr. Tucker made the statement this morning that he did not think that the present warrant offering proposed, as set forth in the Plan, would be successful, because of the present market. I do not know if he made that in the form of an amendment or the consideration by the management of an amendment.

Anyway, we point out in the Plan that we are not saying necessarily that Gulf States should be used as the medium of raising $14. You can use two tickets, meaning Gulf

States and El Paso, or perhaps Virginia, because, as Mr. Barnes, President of Engineers, testified, he believes that Virginia is worth at least $65,000,000, and there are statements put in the record by investment bankers to show it is worth up to at least $85,000,000. Barnes also said he would consider an offer of $35,000,000 for Gulf and that he would take at least $9,000,000 or $10,000,000 for El Paso, making a total of $110,000,000. We don't know how this would be divided, but we do feel that the raising of $22,000,000 can just as easily be attained on the basis of $109,000,000 worth of assets as if an attempt were made to get $27,000,000.

There is a novel argument presented for the first time in Mr. Tucker's brief on pages 35 to 39, that the consolidated tax liabilities of Engineers for the years subsequent to 1943 have not yet been determined by the Treasury Department, that claims for refunds have not been acted upon, so that if all of the Virginia stock was distributed the directors may be personally liable.

The real reason for this argument appears on page 36w where Mr. Tucker says:

> "It might not be deemed necessary to hold all of the common stock of Virginia for this purpose as protection but the Engineers directors would undoubtedly not desire to distribute as much as 5% of the Virginia common stock for such distribution would make it impossible for Engineers and Virginia to file consolidated returns * * * and Engineers would then become subject to tax on the dividends received from the balance of the Virginia common stock."

There is the old argument of the capital gains versus dividend income which has primarily been in the back of the mind of the management in proposing this plan.

However, we wish to state that this entire argument is an afterthought. The attitude of the Staff in the record

was perfectly clear, that we opposed the bank loan and the trusteeship, and yet this argument was not advanced as a reason for having a bank loan and a trusteeship in the entire record.

We feel the real purport of this argument is that Engineers is requesting the Commission to permit a different kind of holding company organization to continue in existence so that consolidated tax returns can be filed for an indefinite period so as to permit large common stockholders to defer payment of dividend taxes in favor of what they prefer to call normal procedure of capital gains. That we feel is the underlying philosophy of this entire proposal.

This record does not indicate, and the Staff would like to know, what is the outside amount of this Engineers tax liability. What technical questions, if any, may have to be considered, and what efforts, if any, Engineers has made to have the Treasury Department accelerate its examination of their 1944 and 1945 reports. The Staff feels that an examination of the 1944 and 1945 returns should be routine. Of course, this is based on pure assumption and has nothing to go by in the record except what we have here in Mr. Tucker's brief, because the excess profits credit and consolidated tax basis for 1942 and 1943 have been cleared, with one exception, perhaps, and that is the distribution of property losses for carry-backs arising in 1944 and 1945. If that were pertinent, the brief indicates that a tax refund claim of $5,000,000 net is being asked for by Engineers, and that would seem to indicate to us at least that for 1944 and 1945 Engineers would not have any tax liabilities when there is a carry-back that great. Furthermore, all these taxes are being accrued currently, so the Staff does not feel that there is any tangible amount that could be claimed from a routine examination of Engineers tax returns for 1944 and 1945 to the extent at least that Engineers should hold approximately $75,000,000 of Virginia assets.

On page 37 of the brief it is stated:

> "It should also be remembered that if the common stockholders of Engineers were required to furnish the additional funds for retirement of the preferred stock and the distribution of the Virginia stock were made at once, as suggested by the Staff Brief, this would result in imposing upon the Engineers' stockholders an additional income tax liability which would not exist if the normal procedure were followed and Engineers paid off the senior stock from its own funds."

This argument assumes that all common stockholders desire capital gains, even to the extent of continuing an unnecessary holding company with useless expenses. There is nothing in the record to substantiate that assumption. This argument also assumes that each stockholder, meaning each individual common stockholder, is in the position to forego dividend income ad infinitum. There is nothing in the record to substantiate that.

The Commission received a letter on Tuesday, September 3, from an investment adviser, one Calvin Bullock, who advises open-end investment trusts which have an aggregate of 28,000 shares of common stock of Engineers Public Service Company. He points out that he is not in favor of this proposal of Engineers to set up a three-year trusteeship, and that it is unnecessary for the company to incur bank borrowings.

He goes on to state his reasons which I will not state for the record right now, but if counsel has no objections, I would like to submit in the record of action, as I did during the hearings in this case, pertinent comments of preferred and common stockholders.

Mr. Tucker also states on page 37:

> "Under the normal procedure Engineers would borrow the funds for the redemption of the preferred

stock and would pay off these loans out of the income which it would receive as dividends on the Virginia stock and the value of Engineers common stock would be increased in like amount."

This raises a serious question if this is not in effect a redemption of Engineers senior securities because of the argument made by counsel of the maintenance of Engineers or trusteeship as a holding company as long as possible in order to gain so-called normal tax benefits from Engineers' large common stockholders, plus the additional fact, as Mr. Tucker argues on page 37 of his brief, that for the purposes of the bank loan and the trusteeship, the expenditure of $357,000 a year are essential expenditures which cannot be avoided.

Of course, Mr. Tucker also makes the argument, as he did this morning, on page 7 of his brief, when referring to expenditures with reference to the payment of the preferred stock, that a holding company over Virginia alone would not only serve no useful purpose, but would also lead to additional and useless expenses.

However, for the purposes of maintaining a holding company organization over Virginia it appears that these same expenses now become essential.

On page 37 Mr. Tucker also argues, as he did this morning, that common stockholders will be subject to a surtax if the bank loan and the trusteeship are eliminated.

We think the best answer to that is Mr. Tucker's own answer to Mr. Condon when Mr. Condon raised the point that he did think that the preferred stockholders were put at a disadvantage because they did not own common stock and could not get in on the Gulf States exchange. As I stated this morning, and I again quote from page 31 in answer to this argument made by Mr. Tucker on page 37, the tax law "notoriously does not apply in the same manner to everyone. The effect and amount of the tax depends upon the individual circumstances of the taxpayer as to tax cost, the nature of the disposition, etc.".

The Staff feels that a more persuasive showing need be made by Engineers to sustain its argument that a bank loan and a holding company form of trusteeship is necessary and fair and equitable.

Mr. Tucker said this morning that the expenses for continuing a holding company organization over Virginia would amount to, as he put it, $180,000. The record shows, quoting from Exhibit A, page 3. of Applicant's Exhibit No. 1, that it would be $357,500.

Mr. Tucker points out in his brief that there is $132,000 of corporate expenses, but we don't want to quibble as to whether it is $180,000 or $360,000, approximately, but we would like to point out, contrary to what Mr. Tucker states, that there is nothing in the record to substantiate that Virginia needs a super staff over it at the cost of $88,000 a year. At the present time Virginia has one president, one executive vice-president, five vice-presidents, plus other officers drawing approximately $157,000 a year. There is nothing in the record, as I have just said, to show that Virginia could not operate efficiently with its present officers. In any event, we still feel that this is a corporate expense of Engineers or the trusteeship.

With respect to the $45,000 of interest which appears on Exhibit A of page 3, we also feel that even though this interest may be worth more than that to the common stockholders, just like the corporate expenses of the officers, this is also a corporate expense of the trustees.

Turning now to the question of the payment of the preferred stockholders, Mr. Tucker considers his theory for the payment of the preferreds to be in accord with the Otis case, American Power & Light case, the El Paso case, and the Western case, as he points out in his brief.

Then he makes a statement on page 5 that Engineers is being forced to involuntary liquidation and dissolution because of Section 11(b). We concur. However, there is an argument, being made by inference at least, that Engineers is being deprived of certain other rights, of being

eliminated as a holding company. Arguing the force of the involuntary liquidation, he implies that Engineers, if it wished, could not voluntarily liquidate, could not merge, or could not consolidate. With that we do not agree. If we were to look at the El Paso case, and the background there, we had issued an 11(b)(1) order to Engineers telling them to vest themselves of their interest in El Paso, but Engineers voluntarily liquidated El Paso. This plan as originally filed provided for two alternative means of eliminating Engineers as a corporate entity. One was an involuntary liquidation and dissolution, and the other was the merger. The merger route has been taken out by amendment. The record will also indicate that company witnesses have testified that all these other routes were available and are available for Engineers to be eliminated as a corporate entity, and as a matter of record it appears that the Plan might still be amended to provide for the merger.

However, Mr. Tucker argues that he is being forced into one channel, an involuntary liquidation, and there is a reason for that. If Mr. Tucker said, "Well, we want to merge or consolidate," he runs up against two problems. One is right in the charter of Engineers, because Engineers' charter provides, and I am reading from page 28 of the Staff brief:

> "A consolidation or merger of this corporation with any other corporation or corporations shall not be regarded as a liquidation, dissolution or winding up of this corporation within the meaning of this Paragraph III, provided such consolidation or merger does not substantially impair the rights and preferences of the preferred stock."

It should also be pointed out that the corporate laws of Virginia and Delaware provide for appraisal of companies consolidated or merged, and as Mr. Tucker admits in his brief, the investment values of the preferreds today are at

least equal to their respective call prices. The Staff does not say that Mr. Tucker or the board of directors of Engineers or the management cannot select any means. They have chosen to select or call this an involuntary liquidation or dissolution. That is perfectly agreeable to the Staff, but the Staff would like to point out that Section 11(e) permits the management or the board of directors the voluntary choice of selecting a route or vehicle for eliminating Engineers as a corporate entity. They have taken the choice of an involuntary liquidation and dissolution.

On page 9 of Mr. Tucker's brief he quotes our American Power & Light case, at the top of the page, and says:

> "The rights of the debenture holders are ascertained by reference to the contractual provisions of the indenture. That is precisely what we are asking the Commission to do in this Engineers case."

The Commission in the American Power & Light case did not only consider the contractual obligations of the debenture holders, but in that case and in every other case considered contractual rights as being one of the entire bundle of rights, and we clearly indicate that on page 8 where we say:

> "If we follow American contentions"—they happen to be the same as Engineers' contentions here—"the carrying out of Section 11 would result in substantial injustices to security holders, and such a result is contrary to the Congressional intention manifested in Section 11."

On the top of page 10 we said:

> "The Otis case establishes the principle that the present investment worth of a security should be the measure of its participation in the Section 11(e) plan providing for the winding up of a company."

Since the Otis case this Commission has held that once it is established that the impact of the Act brings about a plan filed under Section 11(e) in order to comply with Section 11(b), the preferences of the security affected are not matured, but the measure of participation of such security is determined by the legitimate investment value.

The only cases recalled offhand as corollary to this principle are the El Paso case, the New England Power Association case, which dealt with the North Boston Lighting Properties preferred securities, and the present American Light & Traction cases. But these cases in no way affect the Otis and the legitimate investment value theory. In fact, they reaffirm it, because they do not permit a windfall to one class of securities by operation of the Act.

In other words, the El Paso case, as for an example, was purely a factual determination that Engineers Company—meaning they had the legal voting power—would—meaning it was economically desirable—voluntarily liquidate El Paso as a corporate entity. Where it is reasonable, men can differ. It was decided that El Paso would and could have been voluntarily liquidated. But that principle—whether you call it a corollary or exception—reaffirms the Otis case by not permitting a windfall by the operation of the Act.

In discussing the Otis case Mr. Tucker attempts to distinguish the type of involuntary liquidation in that case with the present case. The only significant distinction that the staff observes between these two cases is that the legitimate investment values are different at the time that these two cases were presented to the Commission.

At the time the Otis case was presented to the Commission, legitimate investment value of the preferred stock was below $100. At the time of the present consideration, admitted by counsel, it is above $100 for the involuntary liquidation price. Mr. Tucker argues that the involuntary liquidation in the Otis case wasn't internal reorganization, and that is not the fact in this case. In the Otis case the Supreme Court stated the issue very clearly on page 635:

Argument of Bernard S. Kanton (Cont'd)

"The issue in this case is not whether full priority should be given to preferred over common stockholders but whether the priority which is established by the charter, Note 6, is applicable to a simplification by liquidation under 11(b)(2) and (e)."

The point at issue is whether this charter provision applies. The Court answers that. On page 637 the Court said:

"The charter preference is inoperative in simplification under Section 11(b)(2). The provision having been adopted in 1929, six years prior to enactment of the Public Utility Holding Company Act, a simplification under this Act, having as an incident to it the dissolution of one company in a holding company system, was not an anticipated liquidation within the meaning of Power's charter provision."

It goes on on page 638 and answers this same argument Mr. Tucker is trying to say that the Otis case is distinguished from the present case:

"The reason does not lie in the fact that the business of Power continues in another form. That is true of bankruptcy and equity reorganizations. It lies in the fact that Congress did not intend that its exercise of power to simplify should mature rights, created without regard to the possibility of simplification of system structure, which otherwise would only arise by voluntary action of the stockholders or involuntarily through action of creditors."

Then Mr. Tucker argues on page 21 of his brief:

"The situation and the character of the liquidation in the Otis case is different from this case."

The situation is the same. The impact of the Act has caused the liquidation in the Otis case and has caused it in this case, except in the Otis case there was no choice of elimination by liquidation and dissolution, whereas the management has chosen this route. If you recall in the Otis case we had told the management they should liquidate and dissolve United Light & Power.

With respect to the character being different we wish to point out that the purposes are not to be matured, and the fact, as I have just stated from the case itself, that the business of Power may have continued in another form, was specifically answered by the Supreme Court.

An involuntary liquidation and dissolution in the sense of the charter means only one thing, and that means financial distress. At the time this Commission considered the Western Public Service Company case, when Engineers requested the Commission to permit it to use its funds to buy its preferred stocks on the open market at the then market prices which ranged anywhere from about 50 to 70, Mr. Tucker took the position that even if this was a Section 11(e) proceeding, certain considerations would have to be given at that time, 1942. Those considerations are very important, because they are quite contrary to the position that Mr. Tucker and the management take today.

At that time Mr. Tucker spoke of an involuntary liquidation and dissolution in the sense of the charter, and I would like to quote again from page 32 of our brief what he considers an involuntary liquidation and dissolution:

> "Section 11 is not a situation where the company is in financial difficulty, in the ordinary case, and it certainly would be so in our case because we have no bonds, we have no bank debt, we just have preferred stock, it is an arbitrarily and forced statutory termination of the enterprise, and it has no relation whatsoever to any factors which the parties could have had in mind when they entered the enterprise."

Argument of Bernard S. Kanton (Cont'd)

The same thing was considered by the Supreme Court in the Otis case. However, I would like to read the same portion of the Otis case which Mr. Tucker read this morning, but with the emphasis on the point that Mr. Tucker made in the time of the Western case. The Otis case says:

> "The exercise of legislative power by Congress through Section 11(b)(2) to accomplish simplification as a matter of public policy and the Commission's administration of the Act by dissolution of this particular company results in a type of liquidation which is entirely distinct from the liquidation of the corporation, whether voluntary or involuntary, envisaged by the charter provisions of Power for preferences to the senior stock."

I would like to read one sentence further after Mr. Tucker stopped:

> "This conclusion by the Commission permitted the Commission to examine the investment barriers of the common and preferred stocks of Power."

The Chairman: Could I ask you a question?

Mr. Kanton: Yes, sir.

The Chairman: Supposing the lawyer when drafting a charter wanted to provide against all kinds of involuntary liquidations and dissolutions? What kind of words of art would he use? What would he use?

Mr. Kanton: Well, say for example, Mr. Tucker were drafting the charter of Engineers back in 1925 and he had in mind what an involuntary liquidation means, financial distress,—if I were drafting that charter, I would have to think in terms of an involuntary liquidation being something else than financial distress, and I would have to speak in terms of not meaning financial distress, but any action of any kind whatsoever.

The Chairman: Like atomic energy blowing up the plant and all the people?

Mr. Kanton: Anything, sir.

The Chairman: As a careful lawyer, would you intend to provide against such things as the atomic bomb when you were drafting the charter?

Mr. Kanton: No, sir.

The Chairman: You wouldn't think of it?

Mr. Kanton: No, sir.

The Chairman: Wouldn't you intend to provide against all contingencies that were involuntary?

Mr. Kanton: All contingencies as expressed in that language, sir.

The point we are trying to make, I think, is this, sir. The term "involuntary" had a meaning at the time it was placed in the charter, meaning financial distress. They were used as words of art and still mean the same thing. It is being interpreted to mean something else, impact of the Act. The Engineers today, like most of the holding companies under Section 11(e) are not solvent. As a matter of fact, they are solvent. They have the right, the choice to go out through other means. They do not have to go out through a so-called involuntary liquidation. They can voluntarily liquidate. You see, the difficulty in this case is that the voluntary liquidation price is not the same as the involuntary, which is the difference from the other cases, so the Company cannot argue that we are voluntarily liquidating. They must say "We are involuntarily liquidating, and we must try to distinguish it from the Otis case, which says an involuntary liquidation put in the charter before 1935 meant one thing, financial distress."

The point is, getting back to your point, sir, I think that because of the meaning of "involuntary liquidation", in the law, that more specific words would have to be put in building up what is meant by an involuntary liquidation, more than the word "involuntary" meaning of any nature, of any kind, and take it out of the realm of words of art.

The Chairman: Up to the Otis case, wasn't that the common concept of members of the Bar that "involuntary"

was supposed to cover all contingencies that were not voluntary?

Mr. Kanton: By members of the Bar you mean, sir,—?

The Chairman: Men who used to draw these so-called charters for corporations, lawyers.

Mr. Kanton: I may be wrong, sir, but I don't think so. I think, as the Supreme Court pointed out very clearly, that it had a different meaning, meaning financial distress, as we pointed out on pages 9 and 12 of our Release in United Light & Power, 4215.

The Chairman: Will you quote that phrase from the Supreme Court ruling where it uses the words "financial distress?"

Mr. Kanton: It does not use "financial distress" but it does say "The exercise of Legislative power by Congress results in a type of liquidation which is entirely distinct from the liquidation of a corporation, whether voluntary or involuntary, envisaged by the charter provisions of Power for preferences to the senior stock."

Of course, I used the words "financial distress" because, reading the cases, that is what involuntary liquidation means, and that is what Mr. Tucker himself said in 1942, what involuntary liquidation means,—financial distress.

The Chairman: I did not mean to interrupt you.

Mr. Kanton: That is all right, sir.

On page 21 of Mr. Tucker's brief, it is stated that the Commission considered the El Paso case on the basis of contract rights. That is true, the Commission did consider it on the basis of contract rights, but a specific contract right, not, as Mr. Tucker says.

Mr. Tucker says in the El Paso case:

> "Payment to the preferred stockholders of the amounts provided in the charter to be paid to them on liquidation whether voluntary or involuntary, was held fair and equitable."

Then he goes on to say:

"That is exactly the position we take here."

The reading of the case will disclose it was on the basis of the fact that a voluntary liquidation could and would have occurred outside the impact of the Act, and that was a pure factual determination. The case clearly indicates, in reading El Paso, on page 3, that they are trying to effect the voluntary liquidation, and throughout the opinion they speak of voluntary liquidation, not an involuntary liquidation, and that is the basis of that decision, and not as Mr. Tucker says, just plain contract rights as he is trying to say right now, which we must look to, immature involuntary preference.

Commissioner Hanrahan: Doesn't it become clear that every one of these cases are factually decided that way, the matter of Otis on its facts, the matter of El Paso on its facts? You are answering Mr. Tucker by saying the matter of El Paso, because of the facts, aren't you?

Mr. Kanton: No, the proposition posed to us in the El Paso case, and the American Light & Traction case by the management, is that it was a voluntary liquidation, that would have been brought about outside the impact of the Act. There the Commission has to determine the fact whether that could have been so. In the Otis case, and every other case, the managements have said the impact of the Act has brought this about, whether we merge, consolidate or involuntarily liquidate. The Otis case set up a standard for measurement which says that preferences cannot be matured.

When you get to these factual determination cases, and the management says we could have done this outside of the Act and would have done it, we must determine then is that true, shall we give the controlling weight, as we did in the El Paso case, or give it considerable weight, as we did in the North Boston properties in the New England case?

Argument of Bernard S. Kanton (Cont'd)

That factual determination is not here before us today because the voluntary price happens to be the same as the call price, and the involuntary price is the par. So Mr. Tucker cannot argue involuntary liquidation because if he does he admits he has to pay the preferred stockholders $110.

In attempting to distinguish the position that the Engineers' management took before the Commission in the Western case, it is argued that, on pages 22 and 23, that Engineers is considering contract preferences as one of many factors, but that under the fair and equitable standards of this case it means that preferences must be given controlling weight.

I believe I pointed out that the basis of Mr. Tucker's fair and equitable argument is that he is asking us to mature the involuntary liquidation preferences or give them controlling weight, and the staff feels that to follow this argument would, in effect, overrule the Supreme Court's decision in the Otis case.

The only real distinction between the Otis case and the Engineers' position in the Western case in 1942, which were practically the same, and the present case, is that the legitimate investment values are now above the involuntary liquidation price, so that to give substance to Mr. Tucker's argument would place a premium on common stock managements to delay complying with the Act until the investment values of senior securities go up to a point where the junior securities can step in under the guise of the impact of the Act and lower the investment value claims to the involuntary liquidation prices. Under such a procedure the equity holder has nothing to lose and everything to gain because, as Mr. Tucker argued this morning, he agrees in principle with the Otis case, as he stated in his Western case, because he did not want the common stockholders to be freezed out.

That was on a going concern basis and that is the way legitimate investment values are determined, the way earn-

ings will continue. That is the way we are arguing today, the standard is still the Otis case, that if the earnings were to continue, its legitimate investment values, are at least $105 or $110, and they should be paid $105 or $110.

The last point Mr. Tucker makes on this is what we would call the legitimate sharing of the cost argument.

The staff thinks this a totally improper one because it ignores the investment values of the preferred today and attempts to value the preferred in the light of past history of Engineers.

Nevertheless, we want to point out several facts that Mr. Tucker's approach is without substance. This argument, in effect, was made by Engineers, North American, before the Supreme Court, on the question of the constitutionality of Section 11(b)(1), and the Supreme Court, in Justice Murphy's opinion, contained in 66 Supreme Court 785, states as follows:

> "Moreover, there is no basis here for assuming that in limiting the scope of North American's operations there will be dispositions of securities for inadequate considerations, therefore, by raising a question as to whether there is a destruction of these values without just compensation. The Act does not contemplate or require the dumping or forced liquidation of securities on the market for cash. Under Section 11(d) and Section 11(e) of the Act, any divestment or reorganization plan must meet the standards of fairness and equitableness. In many instances this may evolve no more than a distribution of these securities among the existing shareholders of the holding company, but securities sold for cash, speculation as to the unfavorable market conditions cannot undermine the validity of Section 11(b)(1). Any plan of divestment or reorganization, moreover, must be carefully scrutinized by both the Commission and the enforcing Court, thus enabling the assertion and protection of all shareholders' rights. (See Otis & Company *vs.* SEC.)"

And there are provisions in the Act guarding against any unduly rapid divestment or liquidation.

There the Court puts in a footnote:

> "Under Section 11(c) the holding companies are given at least a year to comply with an order of the Commission under Section 11(b). The Commission is also authorized to extend the time for an additional year, on a proper showing."

In reading this quotation from The North American case, and looking at the present case, it should be pointed out that since 1942 Engineers has more than the statutory two years under Section 11(c) in order to comply with your divestment orders, because of the pending appeal at this time before the Supreme Court, and it has disposed of its properties from 1942 to date on terms most advantageous to itself.

We feel that this whole argument of Mr. Tucker's is based on the hindsight theory. What would the position be if the investment values in 1942 were higher than they are today? What could his argument be then, losses or gains? The entire argument ignores the real nature of a common stock. Mr. Tucker never uses any figures. He just says "We get to $100 because it is fair and equitable." We do not know what he divides by, what he adds or what he is taking away or who is to get something.

Let us look at a couple of figures:

In Engineers today the common stockholders have invested approximately $58,000,000 or $30 a share. They are asking or suggesting that they increase that to $27,000,000. The Company proposes $22,000,000. The total of $27,000,000 and $58,000,000 is $85,000,000. Then, measuring that $85,000,000 against what Mr. Barnes considers these three properties are worth, it looks like for that $85,000,000 the common stockholders are going to get at least $109,000,000. The common stockholders would argue Yes, what about the interest the preferred stockholders

have been getting on their investment, a weighted average of 5.3 percent? Engineers' common stock dividends ceased in 1932. If we were to take the same weighted average of 5.3 percent of $58,000,000 present investment we get approximately $45,000,000. We add the $45,000,000 to $85,000,000 and we get $130,000,000. The preferred stockholders would then say: "What about Puget Sound? That was a pure equity investment, a loss that should never have been made of $34,000,000." It was made at a time and with a borrowing of money at 5.5 percent in order to get a return of 2.5 percent. At the time of the passing of the Holding Company Act of 1935, Puget was not paying any dividends. The preferred stockholders would argue, "Take that $34,000,000 off" and so you only have an investment of approximately $95,000,000. They are still getting at least $110,000,000, so if we look at that in that light, in terms of figures, it does not appear that Engineers' common stockholders are being so badly treated, on the basis of Mr. Tucker's argument of comparing the $39,000,000 invested, with the $42,000,000, which is the present investment value of those preferred stocks.

As I said before, we don't know where Mr. Tucker adds or where Mr. Tucker subtracts. All we know is in effect he is asking this Commission to mature the involuntary liquidation preference. We don't know how he gets it to $100. He has not told us. On the figures I have given he perhaps would get more or less. In any event, his entire argument ignores the real nature of a common stock. It is an equity and leverage security that other than investment ventures, stands to gain limited sums and loses the entire investment, which losses and gains of past operations are reflected very clearly today in the investment values of both the preferreds and common stocks.

I would like now to briefly refer to the illustration on page 25 offered by Mr. Tucker to indicate that the investment value theory cannot operate logically if his factual situation were assumed to exist. That, as he explained

this morning, where you have a 4.6 preferred stock with a cost of money which had risen to 6 percent and no change in the risk factor, he claims it would have an investment value of $77.

The difficulty with his illustration is that we do not know what the common would be entitled to under this illustration. That is a very important factor. We had the same thing in the Otis case and we had the same thing in the Puget Sound Power & Light case, where the preferred stock got 97 percent of the enterprise and the common got 3 percent.

He does not tell us what the investment value of the common is and that has to be determined. We need more facts in order to make such a determination.

What I would like to point out in the Western case, Release No. 4114, what Mr. Tucker and the management's position was when the same factual situation existed, as he points out, and claims here, reading from the bottom of page 8, we say:

> "On the other hand, Engineers' president testified on the basis of a rough calculation of eight times current earnings applicable to common stocks of subsidiaries, plus Engineers' cash assets of $7,500,000, that at the end of January, 1942, Engineers' investments had a value somewhat in excess of the involuntary liquidation preference and the outstanding common stock, or $100 per share."

The same factual situation. Reading now from page 11, what was the position in 1942, that the management took when they had enough assets?

> "We also take note of Engineers' argument that the pending Section 11 proceeding is not likely to result in the liquidation of Engineers, and that even if it does, the proper standard for the adjustment of rights of the preferred stockholders is not the liqui-

dation preference to which they would be entitled, on a voluntary liquidation, liquidation in bankruptcy, or a reorganization proceeding, but the fair value of their expectations, in the absence of any such proceedings, taking into account their liquidation preferences as but one of many factors."

That is the same position, I think, the staff would take here.

My time is running short. I thank you, gentlemen.

(Formal matter relating to adjournment omitted.)

* * * * *

ORAL ARGUMENT OF MR. ZAZOVE.

Mr. Zazove: From considering Mr. Tucker's brief and his argument here this morning, we have been relieved of one point, as far as we are concerned, in this case, and that is, the necessity of arguing as to the real worth, the real value, of these preferred stocks.

Incidentally, before I get into the merits of our position here, I'd like to explain to the Commissioners just how it happened that Mr. Condon was in this case, and whom he represents.

At the time that the Board of Directors of Engineers was considering the filing of this Plan and the adoption of it, one of the directors, namely, Mr. Streeter, cast a dissenting vote when the Board of Directors voted on the Plan. It was his position that the Plan was unfair to the preferred stockholders, and it was his further position that in view of the attitude of the management and its counsel, namely, to represent exclusively the common stockholders, that it was necessary in this case, in order that adequate representation be assured to the preferred stockholders, to have independent counsel.

As a result of his position, the Board of Directors adopted a resolution, to which we refer in our brief, which

authorized the Company and the Officers to employ Mr. Condon, as a representative of the preferred stockholders. In this resolution it was provided that the Company would reimburse the preferred stockholders not to exceed $5,000, for any expenses incurred by Mr. Condon in so representing them. The resolution further provided, however, that nothing in that resolution was to prohibit or restrict Mr. Condon from applying to the Commission for a further allowance or award, in so far as the Commission thought his services were entitled to more.

We make this point because we feel that it is indicative of the entire attitude and the approach which the management and the Board of Directors took in this entire case. The Plan provides, as well as does the brief that Mr. Tucker filed here, that the Company will resist in litigation, in argument, or in any other manner the award and the payment of any amount in excess of $100.

It seems to us that in view of the fact that it was considered an adversary proceeding, in view of the fact that the company's entire management and that its counsel was devoting its talent and its weight to representing exclusively the common stockholders, that it came with ill grace to file a plan here which made no provision whatever for the payment of counsel fees or expenses to anyone who would be representing the stockholders, other than the common stockholders, and that it comes with considerable ill grace to at this time continue in a position that the Commission does not have authority or jurisdiction to award fees and expenses. It just happens, in this particular situation, as the record shows, that the expenses out-of-pocket, which Mr. Condon's office has incurred already, before the hearings were closed, exceeded the $5,000 figure that was mentioned.

We are not at this time talking about fees, but we are talking about an attempt, if it is condoned, to place the preferred stockholders, who in this case are unorganized, in a position where they have the Company with all its

assets and with its lawyers fighting them, and with no provision for anybody paying independent counsel to represent their position. We think that as a matter of administration of the Public Utility Act, that it is a salutory thing to have outside counsel in these cases.

We'd like to call your attention to what Commissioner Douglas said when he was a member of this Commission a long time ago in the International Paper case, where he pointed out that when you examine plans with a view to determining their fairness, it is necessary to consider whether there has actually been arm's length bargaining as between the groups who had adverse interests in these proceedings.

Applying standards of that nature, it seems to me, gives the Commission the equitable power, as well as the duty, to consider that here was a plan that was proposed at the beginning, considering only how it affected common stockholders.

There has never been any consideration given by the management or by the Board as to how it affects the preferred stockholders. They have been treating the preferred stockholders here as interlopers, rather than as part owners of this business. Not only in the payment of $100 but in other aspects which I will mention later, is this plan unfair to the preferred stockholders, and so I dissent from Mr. Tucker's position that the only question here involved is how much do you pay the preferred stockholders. I'll get to that later.

We felt, in view of what the Commission said in the American Power & Light case that the Commission had an independent duty to arrive at its own conclusions as to the value of these preferred stocks. The management at the hearings, produced no evidence whatsoever as to the value of the stocks.

Mr. Barnes, the President and Mr. Benjamin, the secretary, testified that in the absence of the Act the stock

would be refundable, but that was the sole extent to which they went. Consequently, it was necessary, we felt, to employ the services of one whom we considered an expert in valuing security issues, and accordingly we employed Dr. Badger, who has testified before the Commission in other proceedings, and he has made an extensive study and a report was filed in this proceeding, indicating the value of these stocks. I do not feel that it is necessary at this time to take up the Commission's time by reviewing that evidence, but I do feel that it is important to point out that Dr. Badger decided that in his opinion as an expert, if there were no call provisions in the Charter, these stocks would have a value of $108.70 for the $5 preferred, $119.57 for the $5.50 preferred and $130.30 for the $6.00 preferred. So, when we talk about $105 and $110, we must bear in mind that the stocks are really worth more than that.

But, assuming that the call provisions in the charter place a ceiling upon the amount that the preferred stockholder can get we have to say then that at the most we are entitled to what the preferred stock would get if the stock was called.

Getting down to what Engineers' argument really boils down to, it seems to me that Mr. Tucker's brief is an attempt to rationalize what he has said and what Engineers has done in other situations with what they are attempting to do here. He is talking in terms of fairness and equity but he is getting back constantly to the fact that what they are asking the Commission to do is to say that there is a ceiling in all Section 11 reorganizations as to what the treatment is to be that is to be afforded senior security holders. That ceiling, in the case of preferred stock, would be the involuntary liquidation price.

The reason he has done that is because Mr. Tucker does not really object to applying the investment value theory. He doesn't object when it benefits the common stockholders. This very management has done it many times, has applied it in other cases which I will mention. Mr. Kanton this

morning dwelt on the Western case. There is no sense in repeating that, but let's go back to 1941, at a time when Engineers disposed of some of its assets and had some money available.

At that time the stock market was down. The preferred stocks were selling at around $60, and then because it suited their convenience, and because they were afraid that they would have to be in here arguing that the common stock should not be eliminated on a dissolution of Engineers, they said that you should not judge these things on the basis of an involuntary liquidation because they wanted to have something left for the common stock, but if it was an involuntary liquidation when this plan was filed, similarly the disposition of these assets back in 1941 was the first step in the dissolution, and if it is true now that the involuntary liquidation provisions should apply, it was true then, and we'd like to know why the Commission permitted them to go out and buy a preferred stock at less than $100, because those were the involuntary liquidating preferences.

In 1943 they did the same thing. When the Western case came along they had quite a bit of money accumulated and they wanted to buy 35,000 shares at less than $100. Apparently the Commission foresaw what was going on, that this was a piecemeal attempt at buying preferred stock, and they wouldn't approve it.

The Commission pointed out there that the stock market prices were influenced by the action of the management.

Mr. Tucker makes a lot of the fact that the preferred stock in the depression years sold at around $16 or $20. Well, he fails to mention to you that in 1942 the common stock was selling for $1.25. Now if you are going to use stock market values as tests of what you should pay the preferred stockholders in this case, it seems to me that the common stockholders are getting all the breaks here, because they are certainly going to get a lot more than $1.25 for their stock.

In addition to that, Mr. Tucker attempts to discard the Otis case by saying that the dissolution there was different than the dissolution here. We do not agree with that, but let's assume that that is the case.

If the dissolution there was different than the dissolution here, and in there you had a holding company system continuing, and he says it's all right in such a situation to apply the fair investment rule, then we would like to know why Engineers in the El Paso case—and don't forget the El Paso case was a plan proposed by Engineers—they didn't say "Apply the investment value doctrine." They did not. There they said, "We want to apply the voluntary liquidation provision of the charter," because it so happened that in El Paso, they called for the payment of par, but in this case, where it happened to be the same as the redemption prices, they don't want the fair investment value theory any more, and they want to apply strictly the involuntary liquidation provisions of the charter.

I want to elaborate more on this situation of whether or not you have a holding company continuing in existence.

If it is true that the rule in Otis applies only where you still have a continuing holding company system, that means that where you have a series of companies you apply the investment value rule in all the dissolutions until you get to the last company, and then when you get to the last company, since there is no more holding company system in existence, you apply the involuntary liquidating prices.

Well, it seems to me that tests and rules of fairness cannot depend on when, in a process of simplification, the dissolution of a particular company happens to occur, and as far as the preferred stockholders are concerned, it is vitally important to them because you have different groups of preferred stockholders in all these different companies, and you cannot be applying one rule of involuntary liquidating prices to one group and to another group apply the fair investment value theory. You come out with an impossible situation.

Oral Argument of Mr. Zazove (Cont'd)

In line with the Otis case, I'd like to point out—and our brief has quoted some of the cases before—that this Commission has really consistently been applying the fair investment doctrine even though it hasn't talked about it in all the cases. Usually you don't get into this controversy because a company recognizes that where there are enough assets and enough earning power to warrant payment of the call prices that is what they do. They don't make any fuss about it.

On page 5 of our brief, footnote five, we state:

> "Recently the Commission approved an application by Columbia Gas & Electric Corporation, proposing the issuance of warrants to its common stockholders to purchase the common stock of an operating subsidiary,"——

and that is exactly what happened here, in connection with the common stock of Gulf States; and the divestment of Cincinnati in the Columbia case had been required and ordered under Section 11. The application provided that they wanted this application approved so the stockholders could "maintain their investment position" in the subsidiaries.

To interject here, when this Plan was filed, the management of Engineers sent out a letter to all the stockholders of Engineers in which it said that it had decided upon this Plan, and the mechanics of it, so that the common stockholders could maintain their interests in the subsidiaries. It is exactly the same situation as the Columbia Gas situation.

Not only that, but throughout his brief, Mr. Tucker has always objected to the position taken by the staff because, he says, if we have to sell some Virginia stock for an escrow, then the common stockholders will be losing their position with the company, or if a common stockholder has to sell some of his warrants or some of his Engineers' stock to raise money, he would be losing his position in the under-

lying companies. So the situations are identical. Incidentally, I forgot to say that it was proposed to use the proceeds from the exercise of the warrants for the redemption of the preferred stock of Columbia, and that preferred stock had to be retired because, when the Company had divested itself of its assets, its capital structure would no longer support the preferred stock.

But, mind you, there the Company came in voluntarily and said "We will use the proceeds to retire the stock at the redemption prices." The Commission approved of this. We do not think the rule as to the amount that the preferred stockholder should receive in these cases should depend on what the management thinks is fair, which is what this boils down to.

If Engineers had come in with an application saying, "We are going to use the proceeds from these warrants, and the cash we have on hand for the paying off of preferred stockholders at redemption prices," I do not think that the Commission would have turned them down as being unfair to the common stock, in view of the previous decision. That's what has been happening all along.

Take the North American situation. Originally, the North American Company filed a plan in which they proposed to retire their preferred stock at the involuntary liquidating. There there was a difference, just as here, between involuntary liquidation and voluntary liquidation. But the case dragged along and dragged along and no decision was being reached, and the management of North American realized that they were paying high dividends on these preferred stocks, and that they had adequate cash on hand and they had assets that they could get a bank loan. Those are exactly the same things that are happening here.

They came to the Commission and said "It just makes good sense to us to let us retire the preferred stock and pay the redemption prices" and the Commission permitted them to do it.

In release No. 5796, which was the findings of the Commission in that case, they said "With respect to the propriety of the proposed payment of the call price of $55 per share plus accrued dividends to retire this Serial Preferred Stock, the record indicates that it is financially advantageous to The North American, under present market conditions, to sell 700,000 shares of common stock of Pacific, and use the proceeds thereof, together with other funds not currently needed in its business, to redeem its serial preferred stock, 6 percent series.

"This is because Pacific common stock is now selling on a yield basis of 5.19 percent, together with other assets, yielding very little income, and will be employed to redeem a 6 percent stock at $55.00 per share or on a 5.45 percent basis."

Well, that is exactly the situation here. If it was fair to The North American stockholders to pay them redemption prices because the stock was certainly worth it, then we think it would not be fair here to do anything other than that.

Getting back to method again, as Mr. Kanton called to your attention this morning, under Section 11(e) the management has a choice of remedy, so to speak, a choice of method. In this particular case every single method they could have chosen except this dissolution thing which they finally came up with, would have resulted in the preferred stockholder getting the redemption prices.

For example, when the Plan was originally filed, it provided alternatively for a merger of Engineers with Virginia Electric Power Company, and the reason for it was a tax one.

They had a $31,000,000 carry-over as I recall, and they wanted to save that carry-over by merging with Virginia, but then the Excess Profits Tax Law happened to be repealed in the interim and so they couldn't take advantage of this carry-over any longer, and they came in and amended the Plan and said, "We are going to dissolve Engineers."

I don't think that they would have done that except that at the hearings, counsel for the Preferred Stockholders, on cross-examination, brought out that the Charter of Engineers provides that in the event of a merger, it is not to be considered a dissolution, within the meaning of the charter, which brought them face to face with this proposition, that if they merged the companies they would then be faced with the Delaware law and the Virginia law, which provide that the stockholders are entitled to an appraisal, and they would have had to be paid off at the value of the stock. So they changed it.

Well, there were other alternatives. They could have offered the preferred stockholders a chance to participate in this business—and I will later develop why I think the business is continuing—but they didn't.

What they wanted to do here was to maintain the equity in the underlying companies exclusively for the common stockholders, unless, as a common stockholder, a fellow also owned the preferred stock. We will develop later on why they did that.

Another method they could have used was just an out and out refunding, which is just what they are really doing here, anyway.

They are going to have a bank loan; they are going to sell warrants. It's the same thing as a refunding. Instead of selling the stock at competitive bidding, which a lot of companies do, they are selling it to the common stockholders. In other words, the common stockholders are putting up the money, which, together with the cash on hand and together with the proceeds from the sale of warrants, will be used to retire the preferred stocks.

The trouble with Mr. Tucker's argument is that, in his own words, "You can't have a rule that won't work both ways." That's what we think this boils downs to. If it is fair to give the preferred stockholders less than their involuntary liquidation preferences, when the stock is not worth any more, it certainly must be fair to give them more

when it is worth more, and the only reason he isn't contending for that is because he is interested solely in how this plan affects the common stockholders, rather than all the stockholders.

His second point, about Otis, is that the dissolution there was different than this one. Well, in Otis the Company was dissolved just as much as it was here. It was terminated, and everyone was paid off. In Engineers, Engineers has dissolved and the stockholders are paid off and that is the end of Engineers. But, as far as the business continuing, we think that it is exactly the same. All that Engineers' business was was to hold stock in subsidiaries. If you were a stockholder of Engineers, you held indirectly through Engineers, stock in underlying operating companies.

After this plan gets all through working itself out, these stockholders of Engineers wind up holding the stock of the underlying companies directly. Instead of holding Engineers' stock they hold the underlying stocks, and the operating companies which are really the business of Engineers, will continue in business.

As far as diversification is concerned, which Mr. Tucker talks about, the stockholder has just as much diversification whether he holds the stock directly or indirectly.

Furthermore, in Puget Sound, which was another case where Engineers itself had come in with a Plan to reorganize the Puget Sound Power & Light Company,—the Commission listened to a similar argument and said that in the United Light & Power case, which we are calling "Otis"; "that situation contemplated an actual liquidation," so apparently the Commission, as well as the Supreme Court, was not influenced by the fact that all you had was the top holding company going out and an intervening holding company becoming the top holding company.

I'd like to refer to what Commissioner McConnaughey said in the El Paso case, when he talked about liquidation. I do not think I could equal Mr. McConnaughey's language, but I think it applies here, and I'd like to read it. He said:

Oral Argument of Mr. Zazove (Cont'd)

"Liquidation has various meanings, depending upon the setting in which it is used. If it gets in its most generally accepted sense, as applied to corporate operation, the word describes a complete winding up that brings to an end the active participation in a going enterprise of all who theretofore had been associated with it. Not only is the intangible corporate vehicle dissolved, but its rights and property by which the business had been conducted are disposed of and the proceeds distributed among all the participants in proportion to their interests. Thereafter, none of them draws benefits from the continued operation of the enterprise. The interests of all participants is liquidated."

It is obvious to us that there is no liquidation here in that sense. The business of Engineers is going to go on, and the common stockholders are going to have the benefits of it, and anybody that talks about burdens because of the Holding Company Act is just closing his eyes to the facts.

In our brief we made a calculation on page 36, which just shows whether there has been any burden here that anybody can talk about.

In 1938, which was at a time when Engineers registered under the Act and became subject to its provisions, the earnings of all the subsidiaries—and there were eight of them then—applicable to the stock holdings of the Engineers, amounted to only $3,690,000.

Then, after they disposed of all these companies that Mr. Tucker had talked about this morning, so that now they only have three left, we find that in 1945, those earnings from just the three companies, as compared with the eight, amounted to $6,422,000.

They got rid of some companies, but what did they get rid of? They got rid of peanuts. Key West, a traction company down in El Paso, and the big one they got rid of was Puget Sound, in which they lost $34,000,000.

They used to have a system of accounting there where every year they would offset the losses of Puget as against what they took in from these other subsidiaries. Then, using their own 1946 estimate, we find that from only the three subsidiaries that are left, the earnings applicable to the common stockholdings of Engineers are $7,700,000, in contrast with the $3,690,000 in 1938.

If that is a burden brought about by the Holding Company Act, I wish that the preferred stockholders could be so burdened.

Mr. Tucker also made fun of the fact that we said that his calculation about this $2,500,000 loss from the inability to refund the preferred stockholdings was inaccurate because it is going to cost them, he says, $39,000,000. Well, that is not a cost such as when you go out to a night club and spend $10. Their $39,000,000 is being invested in this company. They can get the $39,000,000 back any time they want. If his argument has any validity at all, why not capitalize all the preferred dividends they are going to save? If you do that, they wind up with a $29,000,000 profit.

Of course, it is not profit any more than it is losses, and when they talk about selling El Paso and Natural Gas Company, of course, they made $1,000,000 on that—he didn't say that—he said "If we had held it until we got to the peak of the market we would have made $4,000,000 more."

So, he says, "We lost $4,000,000."

The fact is, they made $1,000,000 and they didn't lose anything on it.

Incidentally, Mr. Kanton says we ought to get down to figures.

What we are fighting about here is $3,200,000. That is the difference between what they would have to pay if they paid the involuntary price as against the redemption price. You'd think it was something. Actually they've got a claim here with the Internal Revenue Bureau for a $5,000,000 tax refund, and they usually get what they claim because they are very careful fellows.

The preferred stockholders are going to be out of the picture entirely, and who is going to get this $5,000,000? The common stockholders.

What they are doing here is getting the preferred stockholder out of this continuing business at a time when the preferred stockholder can't possibly duplicate their investment. Even if they paid them the call price and they invested that, all they will get is 4.6, so as far as burdens are concerned, it seems to us that the burdens are all on the preferred stockholders.

Getting down to our argument, we think you can look at this thing in two ways. If you want to look at this case like you did at El Paso, it is a very simple matter to dispose of the whole business. In El Paso you had a situation where a company, after complying with the requirements of Section 11(b), found itself without any reason for existence. The common stock management, which was Engineers, had the power to dissolve it; so it was simple. You say in the absence of the Holding Company Act it makes sense that these people, having the power, would dissolve the company. Let's look at the contract and see what they would get.

There it turned out it was $100 a share because the provisions of the charter were identical, whether you had a voluntary or involuntary dissolution.

It's all right with us if you look at this case in the same way. Engineers is now in a position where it serves no useful purpose. The common stockholders have the power to dissolve Engineers. Why not say "In the absence of the Holding Company Act there is no reason for keeping it in existence?"

Instead of doing it under Delaware Law, they are doing it under Section 11(e), but applying the charter provisions, if you treat this like El Paso, you pay the voluntary liquidation price, which happens to be the same as the redemption price, which is no problem at all, but we don't think, if you do that, you are being consistent with other cases, because—and this applies to El Paso—in all these situa-

tions, it seems to me that you are bound by what the Supreme Court said in the Otis case, and what this Commission has already said in the American Power & Light case, and I am not relying on American Light & Traction, because we don't know what the answer there is, but it seems clear that they said that granting an involuntary liquidation of a holding company because of the Act, if you look at the charter, you won't find any provisions in there that cover the situation. They are inoperative, both the involuntary provision and the voluntary provision.

So, in order to be consistent with what the Supreme Court said in Otis, we think that what you have to do here is to value the security they valued the securities in the Otis case, and I don't know any way of doing it except this investment value rule, and that rule does not depend only on the cost of money. That is one of the arguments Mr. Tucker made this morning. If the Engineers sold stock which originally sold on a 4.6 basis, and the cost of money went up, today it is only worth $77.00. What's wrong with that is that it isn't the only factor involved in investment values. You have to consider earnings, assets, what's left for the common stockholders. It is all a fairness and equity theory. You have to look at what each group is giving up and you have to decide what each group ought to get, so that no one is standing the cost of complying with the Holding Company Act; and that is why we think that the legitimate investment value theory is the only one which will work in every situation, and do equity in every situation.

If you were to go along with Mr. Tucker in this case, I feel that what you would be deciding is this, that you can never, in a liquidation or a reorganization under the Holding Company Act, give more than the involuntary liquidating prices. You are putting a ceiling on it. Well, if you do that, you come to a situation where your equity demands, as it does here, that the preferred stockholder be given

more than $100. If there are any losses here at all, it isn't true that the preferred stockholders aren't bearing any part of them. For example, suppose there were no call provisions in this charter; then the Engineers' stock would sell at something above the call prices, as Dr. Badger testified. At whatever price they are selling, it would reflect whatever losses have existed in the Engineers' system because of the Holding Company Act, or for any other reason. Now, the fact that that price is held down by a call provision in the charter doesn't mean that the losses, if any, haven't been reflected in the value of that stock. It just happens that the value has passed the point where the redemption price in the charter puts a stopper on it.

You see, if you had a situation like American Light & Traction, the price of that stock would rise to a point where it would reflect cost of money, and it would reflect losses. In other words, it would be a perfect situation of what the market value of the stock was, considering all the factors. It is only because you have a ceiling price here which the charter puts on it that you can't say that the preferred stock wouldn't be selling for more.

The Chairman: Supposing, instead of taking this road that is proposed in the plan, the Company came in and proposed to divest itself by sale of its interest in these two subsidiaries, in whole or in part; turn it into cash, and thereby become an exempt company, under the Holding Company Act.

Then, supposing the common shareholders wanted to discontinue the existence of this company. Would you say that then they would not be permitted to exercise the charter rights of voluntarily liquidating the corporation?

Mr. Zazove: If the Commissioner please, I think that if I were on the Commission I wouldn't let them go that far. This is no different from what happened in the North American situation, where they tried to go into the State Courts, where the Commission got an injunction.

The Chairman: I was taking the first step.

Supposing they come in now in this case and ask for permission to sell, dispose of their holdings through competitive bidding, and that's all they ask for. What would be the objection to granting that authority?

Mr. Zazove: I think the Commission should say at that time, "Tell us what you are going to do with the proceeds, how you are going to apply them?" or, if it didn't, you ought to approve such a thing with conditions. I don't think you ought to avoid Section 11(e) in that manner, because Section 11(e) imposes a duty on the management to dispose of the assets in a fair and equitable manner, and I don't think it makes any difference whether you sell at competitive bidding or not.

As a matter of fact, this plan does call for competitive bidding sale. I don't think the test of fairness depends on what the method is. It can't, any more than it is fair; the way we look at this thing,—why, in Columbia, you permitted them to retire the preferred stock at redemption prices because the Company voluntarily came in and said, "This is the way we want to do it."

Why should a different test be applied because Engineers wants a different method?

I do not see any point in rehashing Otis. I was here a month ago and it was rehashed plenty in American Light & Traction. I doubt if people will ever agree on what Otis stands for. It seems to me there is a guide post now.

I used to work for the Commission some time ago, and at that time we used to grope around.

I remember, when The North American case was filed,—I worked on that case—we were in a quandary.

I'll show you how it works if you use Mr. Tucker's argument, where they were proposing to retire a series of preferred stock at $50.00, which was an involuntary liquidation price, when that stock had been issued after the Holding Company Act was passed, with the approval of this Commission, and sold to the public at $52.50, and it had only been out two years.

Here they are arguing that this is an involuntary liquidation; therefore we pay involuntary liquidation prices.

We were in a box there. I do not know of any theory that would work except this fair-value theory.

The fact that the Commission let them ultimately pay the fair-value prices indicates that that was the fair thing.

Besides that look what Engineers did in El Paso. Engineers held a block of El Paso stock. Originally when that El Paso case came before the Commission they filed an application proposing the sale of all the assets and the dissolution of El Paso, and they were going to retire the preferred stock at the involuntary liquidating price of $100. While the Commission had the case under advisement, they filed an amendment and said, "We don't want to dissolve El Paso. Instead we want El Paso to buy in the preferred stock at tender." So what did Engineers do? It sold the preferred stock which it held in El Paso for $114 to El Paso and then a couple of years later they came in with an application to pay off the balance at $100, which is what the effect of that whole situation was. They got the investment value of their stock out of it but the public didn't.

Take Puget Sound. There Engineers owned the common stock in Puget. They were afraid that if they applied the involuntary liquidating preference of the company they wouldn't get anything because the arrearages were so high. They came in with a plan and said, "You can't hold out the preferred stockholders here." In the Western case they did the same thing. But do you know why they were arguing in favor of investment value there? Because as I pointed out to you before the stock was selling so low and the underlying assets had such a small value that they were afraid that as representative of the common stockholders there wouldn't be anything left for them. So they were anticipating that when the time came when they were to dissolve Engineers they would get something out of it for the common stock.

I want to point out some other evidences of what we think indicates whether this plan is fair. I mentioned to you that this was not a product of arm's length bargaining. Mr. Barnes testified that the only people he consulted before they filed this plan were the representatives of the biggest common stockholder. And let me call your attention to the fact that this Engineers outfit is controlled by a handful of people, decedents of the Stone & Webster crowd. It is the Stone & Webster family that control everything from start to finish. They are all people that were working for Stone & Webster from 1925. They are all very wealthy people, and all they are interested in as far as this company is concerned is to see that they don't get any dividends. They don't want dividends. They don't want to pay 80 per cent of every dollar they get to the Federal Government. They want this money applied to the retirement of the preferred stock so that all they will have to pay is the capital gain tax.

To show you how unfair it is to the preferred stockholder, they have a provision in here that if you, as a common stockholder, also own preferred you are permitted to turn that preferred in as applying on the purchase price of the Gulf States. That is a tax on that transaction. I know that tax transactions are not supposed to be a test of fairness but when you look at a plan where every conceivable angle has been reviewed, they don't pay a cent of taxes and that's what underlies the whole thing. That's the reason they want a bank loan and want to continue Engineers in existence, so those dividends in Virginia will go up to Engineers, which will just be a few men acting as trustees, but they will be able to file a consolidated tax return and instead of paying taxes on the dividends they get from Virginia, that money will be tax exempt except for a 2 per cent penalty, and will be applied to the payment of the bank loan. If you pass out the Virginia stock to the Engineers common stockholders then they get dividends directly from Virginia. And don't forget that the fact that they

haven't paid dividends since 1932 doesn't mean that they haven't had any earnings. They have had plenty. How do you think they got 15½ million dollars in cash? They have been accumulating this money all the time for the purpose of eventually retiring the preferred stockholders. And it is all for the purpose of escaping taxes. That's all right; everybody likes to escape taxes, but I imagine many of the 12,000 public stockholders would much prefer to get dividends out of this thing. I don't think that the tax situations when they are applied in this manner should be excluded as indications of fairness.

I forgot to tell you that the preferred stockholder who doesn't own any common has no choice. He gets cash immediately and it is taxable immediately. He doesn't have any choice as to when he will sell his underlying security, when to take the tax consequences, whether to hold it or do anything with it. He doesn't have any choice.

As far as the benefits of this plan are concerned, I pointed out already that there is a tax refund of $5,000,000 involved here, and I am sure that if they only get $4,000,000 it takes care of the $3,200,000 that we are trying to get for the preferred. They will be putting the idle cash which they have been holding in the till to use. It seems to me that they would have a long time ago said it is only good sense to at least make a pay-down on the preferred stock. Commissioner Healy told them to do that in the Western case: "Why don't you apply this idle cash that you have in preferred stock to reduce the amount of dividends." But they don't want to do it. They have made up their minds that they don't want to pay more than $100, and that's it.

Mr. Kanton mentioned the expense of maintaining Engineers. We don't know if it is $108,000 a year or $357,000 a year. You have two sides arguing about different amounts there. But certainly the common stockholders are going to save that amount eventually when there won't be any more Engineers. And, as I pointed out to you before, as far as the bulk of the common stockholders are concerned, they

are going to be a lot better off. They are going to have three operating securities which the company itself admits will pay $2.50 dividends. Compare that with a stock which hasn't paid a dividend since 1932, which sold for $1.25 in 1942. If that is burdening, I can't see it.

I don't see any purpose in rehashing all the things that have gone before this. I just want to call your attention to the fact that they have been consistent ever since 1938 in ignoring what the preferred stockholder actually owned in this business. They have been trying to buy them out piecemeal. In 1938 they bought out a block of them at $79. In 1941 they bought out a block of them at $85. In 1941 they were turned down when they tried to acquire 35,000 shares. So what did they do? They owned stock in El Paso, so they came in with a proposal that they would give the stockholders part cash and some of this natural gas common. When you added it to the cash it was still under $100. Of course, now they are willing to give them $100 but no more. The reason that proposal didn't work is because the price of the stock on the market went to $100 so they couldn't get anybody to exchange. In 1944 they came in again and this time the Commission let them go through with it because they said the price was reaching the point where if there was any element of unfairness it was negligible, and they let them acquire 25,000 shares at under $100.

We want to call your attention also to the fact that in 1945 the directors of Engineers actually adopted a resolution which would authorize the payment of 20 per cent of the amount of preferred stock outstanding, with corresponding reduction in the redemption price and in the voluntary liquidating price. What happened? They looked at the charter and they felt that that wasn't safe enough. In other words, they weren't sure that they could get out from paying more than a hundred dollars. So counsel for the company drafted an amendment to the charter in which he said that from now on because of this pay-down business, when the successive pay-downs reach $100 that is to be deemed

as exhausting the claim of the preferred stock. He himself didn't feel that the charter authorized the company to limit them to $100, so they wanted to put in an amendment. Well, the directors never got around to filing a plan of that nature, so the amendment to the charter didn't have to be adopted. But at the hearing we tried to offer that proposed amendment into the record and we thought it was certainly indicative and good evidence as to what the company's management and the company's own lawyer thought was necessary to get these preferred stockholders out at the involuntary liquidating prices. The trial examiner excluded it. We made an offer of proof; we took exception, and we respectfully submit that the trial examiner was in error.

Getting to the tax advantages, they have been covered by Mr. Kanton. As far as this escrow arrangement is concerned, I am inclined to admit that maybe it is a trifling matter in this case because of the fact that the assets are so valuable here. But it seems to me that when you add it to everything else, it is indicative of the fact that they didn't care about the preferred stockholders' point of view. They never considered it. They are interested only in the common stockholders' angle. You talk about fairness. It seems to me that the least they could have done is to make some provision for an escrow. We don't say they have to put up cash. Let them put up Virginia stock. If you will notice in their brief they say, "O.K., we will put up some Virginia stock," but does he say who will get the earnings on that Virginia stock?

Suppose the preferred stockholders eventually wind up in this thing and they own the money in the escrow; in the meantime, if it goes on for three years the common stockholders will be reaping all the earnings. If that is a test of fairness I can't see that one either.

Another thing we are very concerned with is this. The plan provides that upon depositing $100 per share, dividends will be automatically terminated. I know that in other cases the Commission has gone along with that, but if you will

examine those cases you will find that the management was neutral; it was not taking sides one way or the other, and that is why they were permitted that termination of dividends. But here all the assets of the company, the company's management, the company's lawyer, are pitted against the preferred stockholders. They don't make any bones about it. They say that we are going to cut you out, and they say if the Commission says we have to pay you more than $100, we will take you to the highest courts in the land. But they don't want to provide any fees or expenses for counsel to represent the preferred stockholders, nor are they interested in paying the dividends to the preferred stockholders.

It seems to me that where you have the company itself fighting one class of stockholders; the only fair thing to do is to maintain all the parties in the status quo. Why should we be kicked out immediately not knowing whether we are ever going to get any earnings on this money? Don't forget that this plan provides that it can be amended at any time. The minute they put up $100 for the preferred stockholders, they are out. There is nothing to stop this company from not even going through with the plan. They provide in there that if they don't mail out the warrants, the plan is not to be consummated. Or suppose something happens in the tax laws and they decide it is a good thing to merge Engineers. They can amend the plan. There is nothing to stop them from doing it. In the meantime the preferred stockholders are out. Furthermore they have got an appeal pending here. They are attacking the constitutionality of the Act; they are attacking this Commission's own order. Whoever heard of an outfit contesting the validity of a statute, contesting the validity of orders, and then trying to reap the benefits from them, which is exactly what they are trying to do? They want all the benefits of an involuntary liquidation but they don't want to comply with the orders if they don't have to. They have never dismissed their appeal. It is still up there.

We have also mentioned in our brief another point which no one else has mentioned, and it seems to us that it is of vital importance. There is a Part 1 to this plan and a Part 2. Part 1 says that the Commission shall find that it is not fair to pay the preferred stockholders any more than $100. Part 2 says that it is dependent on the effectuation of Part 1. And Part 2 is supposed to give you a way of deciding that we can get more than $100. You can't effectuate Part 1 until you decide we can't get more than $100. If you decide that, we have to appeal from that order, otherwise we are stuck. If we don't appeal, we are in a position where we are bound by the rule of the case. Where do we go? Do we go to the Court of Appeals? I don't know. If you tried to decide Part 2 it says you can't decide Part 2 until you have consummated Part 1. You may find us in the Circuit Court of Appeals in one issue and in the District Court in another. I think the District Court's jurisdiction depends on the voluntary nature of the plan filed pursuant to Section 11(e), and I don't believe that a District Court judge whose jurisdiction depends on the voluntary nature of this thing will take jurisdiction of this case where the plan is being fought by the company. They say it right in the plan. They say, "If you say even under Part 2 that we have to give the preferred stockholders more than $100 we will fight it." So they wind up in the District Court opposing their own plan. If that is a voluntary plan, I don't see it. But let's assume that the District Court has jurisdiction. You will find that Engineers has cooked up a scheme here to circumvent the Circuit Court of Appeals. Where you file a plan and you maintain that it is fair and equitable, and the Commission says it isn't, then what the company is supposed to do is to appeal to the Circuit Court. But the net result of what they are trying to do is this, that the Commission will say that it isn't fair, then they will wind up in the District Court and the District Court will say it isn't fair, then they will appeal to the Circuit Court of Appeals. So they have got two cracks at it instead of one, which the statute intended.

Rebuttal Argument of Mr. Tucker

I think I have saved a few minutes for rebuttal. I thank the Commissioners.

Mr. Tucker: Just a minute on that rebuttal. I think I have the right to open and close.

The Chairman: The Commission feels, Mr. Zazove, that Mr. Tucker has the right to finish.

Mr. Zazove: That is perfectly all right. I am willing to abide by the Commission's ruling. I don't think I could have added anything anyway.

REBUTTAL ARGUMENT OF MR. TUCKER

Mr. Tucker: There has been a lot of talk in this case about taxes. I don't admit for one single minute that it was the main consideration of the management to set up a tax-free plan, as far as they could. But we haven't any apology to make to anybody—this Commission or anybody else—when we say that we do take taxes into consideration. I say that any business man in these days who ventures to take a serious business step without considering the effect thereon of Federal taxes and state taxes is just foolhardy indeed because he will get himself into one awful mess. If I had the time I could give you some illustration from my own experience that will show that to the queen's taste.

Suppose that we had brought in a plan which had neglected the tax consideration and left them out of the plan. The staff of this Commission would have been the first to point them out to us and say, "When there is a method provided under the tax laws whereby you can save these folks taxes, you certainly aren't fair to them when you don't do it." Now, I say to criticize us from that kind of procedure, which is just ordinary business judgment in these days, is unfair.

I wish that we didn't have tax problems in this situation. We are criticized for continuing this trusteeship until they are settled, but nobody tells us how we can go through and complete the liquidation of the company without settling

those things. It seems to us that you have no alternative in this or any other situation where there are serious tax problems but to wait until those things are settled, and if it takes the three years allowed by the Delaware law, it is just too bad. We hope it won't. We hope by the time we get these loans paid off that these things will be adjusted.

If I can say off the record, some criticism has been made by Mr. Kanton that we haven't told him what we have been doing about these tax situations. The tax authorities are coming into our office next week to attempt to work out the 1944 audit. Now, that doesn't mean just because we have claims for refunds that other things are not going to be overlooked. Anybody that has ever had any experience with the Federal tax authorities ought to know better than that. They will look at your refunds and they will see whether they want to allow that, but they don't stop there; and some of these positions that we have been taking are claims that can be questioned. There is no doubt about that. Anybody that files tax returns these days is bound to do that to protect themselves. We don't know and nobody knows whether this audit is going to take a little while or a long time, and nobody knows what the outcome is going to be. It may well be that our claims for refund, that they have talked about, may be disallowed and they still may say that we owe some more taxes.

Can the directors of this company under that kind of a situation just sit by and say, "We are going to distribute all these assets," and take the risk of having the Government come to these directors and say, "You pay the taxes, fellow, you made the distribution." I say that as counsel for Engineers even if this Commission ordered us to do that kind of thing before these problems are settled I would advise Engineers to take it to the courts and fight the Commission, with every confidence that the courts would say no to this Commission. They would say, "You've got to wait until these things are settled."

Rebuttal Argument of Mr. Tucker (Cont'd)

The trouble with the staff, the trouble with my opponents, is that they are unwilling to give Engineers a decent time for a decent burial. What we have followed here is the ordinary method for dissolving a company under Delaware law. I say that with these tax problems in this picture you certainly can't cut us off and say arbitrarily that this is the time you are going to make distribution.

Commissioner McEntire: Mr. Tucker, on that point I haven't gotten from your argument in chief whether or not the company has any plans or any estimate of the probable time it will take to work out this tax situation.

Mr. Tucker: Yes, Commissioner, the record develops the fact that there were some tax problems arising in 1944—claims for refund. I don't know whether I can answer your whole question on the record but if you are not satisfied and you are willing that I go off the record, I can go off the record for the rest of it. We sold in 1944 some traction properties in Richmond. The tax cost of those properties goes back to some acquisitions that were paid for on a stock basis in the reorganization, I think, in bankruptcy, way back in 1896, I believe. Taking a quick view of that situation, we claimed a two million dollar loss on those properties. It was a very complicated picture. Various traction companies were thrown together at that time. Now, what is your tax loss? Our tax man—and this shows in the record—spent about twelve months investigating this whole picture and he came up with a claim of $12,000,000 for a tax loss, and we having paid some taxes without taking that loss into consideration, claimed a refund.

Well, how long is it going to take the tax authorities to do what we did in eight or nine months? You tell me. Certainly they are going to be more careful than we were. They aren't going to let the Government get stuck on that kind of a proposition, and it is going to take a long time to do it.

There is another loss shown in the record of five million dollars. We sold a bus company that we had acquired in connection with Virginia Public Service in Newport News

in 1944. We didn't even file the tax return because we got an extension until August, 1945. It wasn't even filed until then. We came up with a claim against the Government of five million dollars.

These it is true are claims that we are making that ought to lead to some refund of taxes. But what I am saying is that the situations of our consolidated tax returns are so complicated and so difficult of analysis that our judgment as to how the law applies to them may be wrong, and these things which we claim for refund may be thrown out. If I am a director in my present financial condition I am not going to take that risk; not at all, and I don't see any reason why I should.

Commissioner McEntire: That isn't quite what I had in mind, Mr. Tucker. I was wondering if you knew or had any present estimate of the probable length of time it is going to take to have that tax situation rot along and come out with an answer. I might ask you whether or not any inquiries have been made of the Treasury Department, Bureau of Internal Revenue, as to when you might expect an answer.

Mr. Tucker: I don't believe that I can give you an answer to the first one. The Government knows about the tax situation on this present plan because we have been taking it up with them. In fact, they have said to us—and this is one thing we are going to ask the consideration of the Commission on—"You want a tax ruling on this thing saying these things are tax free or that it won't be more than this or that amount. We will have to get a look at the order that the Commission enters here before it is entered, because after it is entered it is just too late."

Now, don't ask me why they take that attitude, but we are going to come to you some time between now and we hope the time that the order in this case comes out, and ask your cooperation, because that is what you are dealing with. They just tell you. You don't tell them. And cer-

tainly we don't want to make any slip because we draw our technical order in a non-technical way that doesn't suit the tax people. I know that they are going at this thing next week, but I don't believe that there is a person living that can tell you, Mr. Commissioner, how long it is going to take to solve all of these problems and come out with an answer that the Government says, "This is what it is."

I don't believe that it will happen before October, 1948, when if the bank loans are put on we will have them paid off on the Virginia dividends. It just seems inconceivable to me that the Government is going to be satisfied with all of these problems before that. That's the best I can do.

Now, Mr. Kanton said that we chose the way that we were to go out, that we chose the dissolution method. I don't think that that is the problem here at all. Suppose we had followed the merger route—and with my own knowledge of tax laws which is not too great, I have no quarrel with what Mr. Zazove said about the reason we abandoned the merger plan, that this thing was set up in the alternative, either dissolution or merger—but it developed that there was no tax saving there and it just wasn't the plan that ought to be followed in our judgment. The point is that however we got out we were forced by this law to get out, and whether the merger route was followed or dissolution route—whatever route was followed—this law forces us out, and as an enterprise the enterprise is going to terminate, and would have terminated just as effectively from my point of view whether by one route or the other, for the reason that as an organization, a functional, going organization, the purposes which the organizers had in mind when they set this company up would thereby be frustrated.

To say that the purpose was to hold common stock is not true. The whole criticism of Congress was that that wasn't the purpose of a holding company; that the purpose of a holding company was control and managing and this

and that, not just holding. In fact, one of the suggestions made at the time the Act was passed was that these companies might conceivably turn themselves into investment companies if they were ingenious enough to think up a scheme which this Commission would approve which would divest them entirely of management and make them entirely a holding company. So that the fact is that we are by this law forced out of business, and this enterprise is forced to terminate by the Act.

I have no criticism of Mr. Kanton when he says that I am arguing here that if this dissolution matures the preferred stock contract matures the liquidation, but that is not my position. I am resting on very different grounds. I did take that position temporarily during the hearing, I will admit, but now I am resting on the ground that when all the equities in this situation are viewed, then the fair thing is to put the weight on this one thing which is one of the bundles of rights. And I don't go any further than that. If you folk don't believe it, I will expect equitably that you will decide against it, but I think equitably you ought to say that under all the circumstances it is fair and equitable that the preferred stockholders in this case should not get more than $100 and accrued dividends.

Now, it is said that this thing is reflected in the present investment value of the common stock. Sure it is. But my point is that if we hadn't been forced by the Act to take these losses, the common stock would have greater value, and if that isn't a loss as somebody said, I don't know what I am talking about. If we had not been forced to sell El Paso Natural Gas, if we hadn't been forced to sell Savannah, if we hadn't been forced to sell these other things, the common stock would have had a greater value now than it has, market-wise and investment-wise.

I am not going to take much time with this Western case. I tried to take the position in my brief, as clearly as I could, that I am not being inconsistent, and I even took

the trouble in the record, which my brothers failed to recognize, to get the background of the Western case in. The truth of the matter is that in my argument before this Commission in the Western case I anticipated the Supreme Court in the Otis case as applied to the facts of that case. I don't get any credit for it but that's what I did because in that case there wasn't enough assets to pay off the preferred stock and still leave something for the common stock. So I say as applied to that end of the case, all right; then you have got to follow the principle of the Otis case. But I say as applied to this kind of a case where there is a substantial equity left, the Supreme Court in my opinion would never take the same position. That is my position.

Now, about this five thousand dollars that Mr. Streeter asked the Board about. Mr. Streeter came to the Board and asked if we would assume that much, and we did. We can't be criticized for doing what the other fellow asked us to do, and that's all he asked us to do. Whether it should have been more or less, that's all he asked and we told him we would assume that much of the legal expense.

Mr. Zazove says that we never put in any evidence as to the market price, after the Act, of the preferred stock. That is not true. We did. Mr. Barnes testified flatly, and we admitted in our brief, that he testified flatly that in his opinion, ex the act, without giving any effect to these equities I have been talking about here today, the preferred stock would be selling at its call price approximately, maybe a little bit more. But on this little bit more business, Dr. Badger said the reason he added that was because it would take three months to get this thing wound up, but since we are going to pay accrued dividends to the time that we deposit the $100, and since we expect this Commission, if they allowed the preferred stockholders some additional amount, to give them something in the way of interest to compensate them for their not having the use of the money, I think our position on that is eminently sound.

Rebuttal Argument of Mr. Tucker (Cont'd).

Just one more thing and I am through. Mr. Zazove said in a footnote on Page 5 that in the Columbia situation they paid $110 for the $6 stock, and $105 for the $5 stock, and $100 for the $5 preferred. What Mr. Condon failed to notice, however, and which appears perfectly clearly in all of the services, is that those were the involuntary liquidation prices in those cases—every single one of them. They did not make the distinction that is made in this case. Talk about the North American Company being so generous, coming in and saying, "We will give our preferred stockholders a premium"; the record in this case shows that they had a lot of litigation pending and it is well known that they had a lot, and the record shows that probably the reason for that on the part of the North American Company was that it would take so long to settle that litigation that it was cheaper for them to do what they did, and they did what reasonable business men do under those circumstances.

I thank you.

Commissioner McEntire: Mr. Tucker, in my limited studies of this on reading the brief and delving a little bit into the record, I am having some trouble with my own thinking about the fact that the figures in the record seem to be pretty stale. I believe they all go back to June of 1945, or a little bit over a year.

Mr. Tucker: I think that is substantially right, except for the estimate for the year 1946. We did put those in in every instance, so that you have, I think, the picture which brings you up to the beginning of 1946.

Commissioner McEntire: There is no 1946 actual in the record, is there?

Mr. Tucker: No, we couldn't have 1946 actual.

Commissioner McEntire: I mean, there is no part of 1946 actual?

Mr. Tucker: The hearing closed on February 13, and I am informed we had full figures for 1945 with two months estimated, and we have an estimate for 1946 as to all of the

subsidiary companies. I don't regard those as stale records, Mr. Commissioner. I think that is pretty current, as current as one can get, because I think that since we ourselves put in the 1946 estimate the Commission can consider them admissions against interest and fairly say that those are what the results will show.

Commissioner McEntire: Do you know how those estimates have been borne out so far by actual experience?

Mr. Tucker: I think they have been borne out very well. I am informed that they are doing a little bit better than the estimate, and that shows conservatism in the estimates. But I think the record in this case shows that the estimate which the management makes usually check out pretty accurately, and my recollection is that there was some testimony along that line. They are not based on horseback opinions; they are based on reports, and I don't think I am going off the record at all when I say that they are based on reports that the local people make as to each one of these situations in an endeavor to apply whatever changes may be indicated by the circumstances that they see coming in the year. Whatever situations they see coming that will change the picture during the year are reflected in those. I think the record will show that the record of past earnings have been extremely accurate.

The Chairman: Is there something further to be presented?

Mr. Kanton: In connection with the off-the-record remarks of Mr. Tucker, I would like to supplement the record with a few off-the-record remarks also on the nature of that tax question.

As I said this morning, we felt that that whole argument was an afterthought that was never presented in the record so the staff took it upon itself to get in touch with the Bureau of Internal Revenue and we spoke to a Mr. Brown in Washington. He has advised us, after looking up the Engineers' report that the 1942 and the 1943 reports have been practically completed but that no attempt has been

made by the Engineers management to accelerate, ever since they have known about this case, the 1944 or the 1945 reports. And when Mr. Tucker says that he thinks the Internal Revenue people are coming around and going over the 1944 report, I think perhaps our questioning may have had something to do with that.

I would like to point out one thing, that we are not arguing that the management of Engineers should not iron out their tax refunds with the Treasury Department. Our argument is against the holding company status because of the holding of $75,000,000 of Virginia common stock. We don't know what the outside claim is on these tax problems. From what we hear they are all refunds. If there is an outside claim and it can be determined say in six months, why can't that amount be put in the escrow fund? Is it necessary to continue indefinitely a holding company, which it will be, in conflict with Section 11(b)(2) of the Act? That is the problem more than the question of ironing out the refunds. They should be ironed out but do you need $357,000 a year of expenses? Do you need a holding company organization in order to continue to do that?

Mr. Tucker: As I said on my main argument, Mr. Commissioner, if somebody will tell us how to resolve these problems, we will be glad to resolve them, but I don't know how to do it. I doubt if there is a living person that can do it.

The Chairman: All parties having been heard, the Commission will take the matter under advisement.

(The oral argument in the above-entitled matter was closed at 3:45 o'clock p.m.)

Hearing on January 3, 1947

BEFORE THE

SECURITIES AND EXCHANGE COMMISSION

IN THE MATTER OF: ENGINEERS PUBLIC SERVICE COMPANY	File No. 54-132
IN THE MATTER OF: EL PASO ELECTRIC COMPANY	File No. 70-1149
IN THE MATTER OF: GULF STATES UTILITIES COMPANY	File No. 70-1150

Hearing Rooms A and B,
Securities and Exchange Commission
Building,
Philadelphia, Pennsylvania,
Friday, January 3, 1947.

Met, pursuant to notice, at 10:30 o'clock a. m.
Before Commissioners:

JAMES J. CAFFREY, Chairman,
ROBERT K. MACCONNAUGHEY,
RICHARD B. MCENTIRE, and
EDWARD M. HANRAHAN.

Appearances:

BERNARD S. KANTON and HARLOW E. LESTER, on behalf of the Securities and Exchange Commission.

WILLIAM E. TUCKER, of Mudge, Stern, Williams & Tucker, 20 Pine Street, New York City, on behalf of the Applicant.

Oral Argument

LAWRENCE R. CONDON and FREDERICK ZAZOVE, for Thomas W. Streeter, Columbian National Life Insurance Company, and others.

FRANCIS H. SCHEETZ, of Evans, Bayard & Frick, 1335 Land Title Building, Philadelphia, Pennsylvania, on behalf of Home Insurance Company, *et al.*

MORTON SCHORR, for Louis Boehm, 60 Broad Street, New York, New York, counsel for Lucille Boehm and Frances White, common stockholders.

PROCEEDINGS

The Chairman: Commissioner McConnaughey will have to leave in a few minutes. Is there any objection to his participating in the decision of this matter if he reads the transcript of the argument that he doesn't happen to hear?

Mr. Tucker: No objection.

Mr. Condon: No objection.

The Chairman: I hear no objection.

I see here Mr. Kanton wishes to speak for a few minutes?

Mr. Kanton: Yes, sir.

I would suggest this, gentlemen, that counsel who wish to participate this morning would formally enter their appearances upon the record, and also other counsel who may be present and whom I don't know about who wish to be heard this morning.

The Chairman: Well, who would like to be heard or would like to make an appearance?

Mr. Condon?

Mr. Condon: Mr. Caffrey, I would like to appear, with Frederick Zazove, on behalf of the Streeter group of preferred stockholders of Engineers Public Service, and would like to make an opening statement which should not exceed five minutes in length.

The Chairman: Have you given the reporter your name?

Mr. Condon: I believe the reporter knows me, sir.

The Chairman: All right.

Mr. Scheetz: Mr. Chairman, Francis H. Sheetz, appearing on behalf of Home Insurance Company and Tradesmen's National Bank and Trust Company as trustee, both of them being preferred stockholders. I believe the stenographer has the names.

Mr. Tucker: William E. Tucker, appearing for Engineers Public Service Company, in connection with the Plan case and in connection with the U-1 applications for El Paso Electric Company, Gulf States Utilities Company and Virginia Electric and Power Company.

The Chairman: Anyone else?

Mr. Schorr: Morton Schorr, for Louis Boehm, appearing for Lucille Boehm and Frances White, common stockholders, who wish to make public objections to any prepayment or redemption that should be made.

Mr. Kanton: Counsel, have you filed a written request?

Mr. Schorr: No. I also ask for a stay of one week, since Mr. Boehm has been out of town for the past few weeks, in which to file a formal request, if you don't mind, sir.

Mr. Kanton: I have no objection; just the filing of a request to be heard?

Mr. Schorr: That is right.

Mr. Kanton: Counsel, may I ask you another question, please?

Mr. Schorr: Yes.

Mr. Kanton: How many shares of common stock do you represent?

Mr. Schorr: One thousand shares.

Mr. Kanton: Held by the two people you mentioned?

Mr. Schorr: That is right.

Mr. Kanton: Could you tell me now for the record when these shares were acquired?

Oral Argument (Cont'd)

Mr. Schorr: December, 1943.

Mr. Kanton: December, 1943?

Mr. Schorr: Yes.

Mr. Kanton: You do not wish to participate at this time before this Commission, is that correct?

Mr. Schorr: That is correct, sir.

The Chairman: Go ahead, Mr. Kanton.

Mr. Kanton: I have here a letter received from a Mr. Christian A. Johnson, who asks leave to file this application, wherein he states his objections to the payment by Engineers to the Preferred Stockholders of Engineers in any amount in addition to $100 per share. Mr. Christian advises that he couldn't be present this morning and formally requests that this letter be read into and made a part of the record.

It is my suggestion that Mr. Johnson's letter be placed in the record of action in this proceeding, and I will gladly give copies of this letter from Mr. Johnson to the Commission, if they so desire.

Mr. Tucker: I have no objection to its introduction with the understanding that it is no more than argument and isn't conceived as evidence.

Mr. Kanton: That is the only purpose, counselor. However, Mr. Johnson is not present, and I haven't had an opportunity to speak to him.

In that connection I would like to reserve an exhibit number, Commission's Exhibit 9, to keep the record open for that limited purpose, in order to show when and how Mr. Johnson acquired these Engineers' common stocks, in line with the questions I asked Mr. Schorr this morning.

Mr. Tucker: No objection.

The Chairman: It may be reserved.

(Commission's Exhibit No. 9 is RESERVED as noted.)

Mr. Kanton: We also received this morning a letter from Mr. Calvin Bullock, signed by Michael J. Kramer, wherein this gentleman voices objection to the payment of

dividends, so-called special dividends, up from the operating subsidiaries of Engineers, and requests that his remarks be placed in the record.

If there is no objection I would like to place Mr. Bullock's letter in the record of action in this proceeding.

Mr. Condon: Mr. Kanton, may I inquire, not having seen the letter, whether there is anything in that that affects the preferred stockholders?

Mr. Kanton: I don't think so, sir.

Mr. Scheetz: Mr. Kanton, does he do that in the capacity of a stockholder of the subsidiaries?

Mr. Kanton: No. He does that in the capacity of a stockholder of Engineers.

Mr. Tucker: I have no objection to the introduction of Mr. Bullock's letter, with the understanding that he just registers his objection.

Mr. Kanton: That is correct, Mr. Tucker.

At this time, gentlemen, I would like to offer in evidence the original notice of filing and order for hearing this morning, which is contained in File No. 54-132-1 which was issued by this Commission on December 19, 1946, and I offer it now in evidence as Commission's Exhibit No. 10.

The Chairman: It is received.

(Commission's Exhibit No. 10 is received in evidence.)

Mr. Kanton: I would like have marked for identification and offer in evidence as Commission's Exhibit No. 11, a copy of said notice of filing of amendment and order for hearing and argument on this Plan as amended, which was published in the Federal Register on Wednesday, December 25, 1946, in Volume 11, No. 250, page 14658, as Federal Register Document No. 46-21877.

I may also add that copies of this release were given to the press and sent to the Commission's mailing list.

The Chairman: It is received.

(Commission's Exhibit No. 11 is received in evidence.)

Oral Argument (Cont'd)

Mr. Kanton: Gentlemen, that is all I have at this time, and if anyone else wishes to go ahead, they may do so.

The Chairman: Mr. Tucker?

Mr. Tucker: I suppose it would be in order for me to formally introduce the documents, and so forth, which have been filed since the last hearing, and the first one is Amendment No. 5 to the Plan, which is File No. 52-132, and I ask this to be marked as Applicant's Exhibit No. 79 as the last exhibit, I think, is Applicant's Exhibit No. 78.

The Chairman: It is received.

(Applicant's Exhibit No. 79 is received in evidence.)

Mr. Tucker: Now, Division D-1 of the conditions to effectuation of the Plan, as included in Amendment No. 5 contained a provision which provided as a condition precedent to the effectuation of the Plan that the Charter of Gulf States should be amended so as to provide for cumulative voting in respect of the preferred and common stocks of Gulf States, as well as some other amendments. We didn't have time to check that with Texas counsel before the filing, but when we did so we got telegrams from Texas counsel which indicated that under the Texas law it would be impossible so to amend the charter of Gulf States without obtaining 100 per cent of the vote of the preferred stock as well as of the common. That would be possible as to the common but obviously utterly impossible as to the preferred.

If there is no objection, I would like to offer copies of the telegrams as Applicant's Exhibit No. 80.

Mr. Kanton: No objection.

The Chairman: It may be received.

(Applicant's Exhibit No. 80 is received in evidence.)

Mr. Tucker: Amendment No. 6 to the Plan, File No. 54-132, amends conditions of Paragraph No. 1 in Division D so as to strike therefrom the provision with respect to

cumulative voting for the election of directors for the preferred and common stocks since it was impossible, of course, to comply with that condition on account of the fact that the preferred stock was publicly held, and we couldn't possibly get 100 per cent, and I ask to have that amendment No. 6 marked as Applicant's Exhibit No. 81.

The Examiner: It is received.

(Applicant's Exhibit No. 81 is received in evidence.)

Mr. Tucker: The Commission's order for hearing and argument in connection with the filing of Amendment No. 5 required that we give notice to the preferred and common stockholders of Engineers of the hearing, and I would like to present at this time as Applicant's Exhibit 82, an affidavit of mailing, which I believe is in compliance with the Commission's order in this respect. It is signed by Richard N. Benjamin who is secretary of the Engineers Public Service Company. It is a letter to the stockholders of Engineers Public Service Company, dated the 20th, and the affidavit shows that with it was mailed the notice of filing of amendment and order for argument, and so forth, of the Commission, dated December 19th. I ask that that be received in evidence as Applicant's Exhibit 82.

(Applicant's Exhibit No. 82 is received in evidence.)

Mr. Tucker: Next I would like to offer in evidence Amendment No. 2 to the El Paso Electric Company's Form U-1 application, File No. 70-1149, as Applicant's Exhibit No. 83.

Next I would like to offer in evidence No. 3 to El Paso Electric Company's application on Form U-1, File No. 70-1149, as Applicant's Exhibit No. 84 and then Amendment No. 2 to Gulf States Utilities Company, Form U-1 application, File No. 70-1150 as Applicant's Exhibit No. 85; Amendment No. 3 to Gulf States Utilities Company Form No. U-1, File No. 70-1150, as Applicant's Exhibit No.

86, the original application on Form U-1 of Virginia Electric and Power Company, File No. 70-1419, as Applicant's Exhibit No. 87 and Amendment No. 1 to the application of Virginia Electric and Power Company, Form U-1, File No. 70-1419, as Applicant's Exhibit No. 88, and I have been requested by the staff, if I was willing to do so, and I am,—to offer in evidence an opinion given by myself and T. Justin Moore to the Board of Directors of the Engineers Public Service Company, on the basis of which they acted in authorizing the filing of Amendment No. 5.

I ask that it be received as Applicant's Exhibit No. 89. Do I understand these exhibits have all been received and will be marked?

The Chairman: Without objection they are received, and will be marked.

(Applicant's Exhibits Numbers 83, 84, 85, 86, 87, 88 and 89 are received in evidence.)

The Chairman: Mr. Condon, do you wish to speak?

ORAL ARGUMENT OF LAWRENCE R. CONDON

Mr. Condon: May it please your Honors, as counsel for the Streeter group of preferred stockholders, I respectfully maintain that the amended plan in its present form is not fair to such stockholders, and that this Commission should withhold its approval unless it is further amended in an appropriate manner.

The Company has stated that its amended plan is intended to comply with the Commission's findings and opinion of December 4th, 1946 in this matter. However, an examination of the Plan reveals that, in fact, it does not meet the requirements laid down by the Commission with respect to assuring the preferred stockholders adequate compensation for any sums that might be withheld from them during the period of possible litigation.

The letter from Mr. C. S. Johnson, incorporated in the Record of Action in this proceeding, by staff counsel this morning indicates an intention on the part of common stockholders to contest the Commission's findings. Counsel representing Mr. Boehm has also given similar indications this morning, indicates an intention on the part of common stockholders to contest the Commission's findings. Counsel representing Mr. Boehm has also given similar indications this morning.

The Plan as now amended contemplates that the Company will pay the full redemption price to the preferred stockholders, either in cash or by allowing that price for the preferred stock if it is exchanged in exercise of the warrants for the purchase of Gulf States stock.

There can be no guarantee that such amounts will actually be paid in accordance with the time schedule estimated by the Company. Although Engineers no longer affirmatively assert that it will contest the Commission's findings with respect to the treatment to be accorded the preferred stockholders there is no provision in the amended plan whereby Engineers waives its right to contest the Plan before the Enforcement Court.

I know that the proposed letter to be sent to the stockholders contains a statement that the Company will not litigate the plan, but it may well be that that letter is not a part of the Plan itself, and therefore is not binding on the Company.

At any rate, I feel that a minimum of protection to the preferred stockholders requires that a similar statement about the Company's intentions not to litigate should be incorporated in the Plan itself.

Even assuming that the Company were to amend the plan as indicated, there is still this very real possibility that the common stockholders may contest the company's proposal to pay the call prices.

As the Commission pointed out on page 23 of its opinion, the Court would have adequate power to assure that the

interests of all parties concerned are protected. With respect to the premium that the company is proposing to pay, the Court may, at the request of one or more common stockholders, enter a stay order, even though it agrees with this Commission, and finds that the preferred stockholders are entitled to the so-called premium. Such a stay might not necessarily delay the consummation of the entire plan, because the Company could go ahead and issue the warrants, which would be all exercised for cash, or, alternatively, in exchange for the preferred stock at the rate of $100 per share as the Plan formerly contemplated.

I am not saying that such will be the action of the Court, but I am urging the possibility of such a state of facts, and the Company should not be permitted to wash its hands of its obligations to compensate the preferred stockholders for any delay in receiving full payment, merely by proposing to accept preferred in exchange at the premium price or by depositing such an amount in cash and thereafter be relieved of all further obligation in the premises. In effect, what Engineers is now proposing, while not called an escrow, is, in fact, an escrow. The Commission was explicit when it said that such an escrow should be adequate should be sufficient to cover the compensation for any delay.

At this point I would like to mention the fact that Judge Leibell, in the United States District Court for the Southern District of New York, on December 20, held, in the Electric Bond and Share case that the preferred stockholders are entitled to compensation for delay in receiving the full payment where there is litigation over the amount to which they are entitled in these 11(e) cases, but the amended plan now before your Honors, makes no such provision, and it should not be approved until it does.

In the event litigation does not ensue there is no harm to anyone that I can conceive, or any valid objection to assertion of such a provision in the amended plan. On the other hand, if there is litigation, considerable sums might be lost to the preferred stockholders, if Engineers have

been liquidated, or its liability to pay such compensation terminated upon the deposit of the money with the trustee as the Plan now contemplates.

There is also a serious question in my mind as to whether the assets proposed to be retained by Engineers will be adequate to cover the compensation which the Commission has held must be paid to the preferred stockholders by the Company. According to the Company's Exhibits, it will retain approximately 5 per cent of Virginia's stock and it will have a balance of about $320,000 in cash. These items are intended to cover all contingencies which might arise. Obviously, since the obligation for added compensation for delay in full payment is not provided in the amended Plan, we feel that additional provision should be made to protect the preferred stockholders in the eventuality that might ensue. It is interesting to note that staff counsel suggested, and this Commission has indicated, that estimating the amount of said compensation for loss to the preferred stockholders would amount to $485,000 over a reasonably foreseeable period of litigation on this question. I respectfully suggest that Engineers be required to keep an additional amount, either in cash or in Government Securities, as this Commission feels would be adequate to protect the preferred stockholders in that regard, and as indicated in its opinion.

Now, I am not asking for anything that the Commission has not already held that the preferred stockholders are entitled to and, in my opinion, it would be a comparatively simple matter to amend the Plan so that it would be fair to the preferred stockholders.

A provision that the plan should not become effective in the event that any common stockholder objected, until the enforcement Court's order became final, would serve the purpose or, in the alternative, the Plan should provide that in the event that payment of the full amount due to the preferred stockholders is delayed, the company will pay an amount equal to the yield of each series of preferred

on the basis of its dividend rate at the price ultimately deemed payable. In this manner, as the Commission said on page 36 of its opinion, the preferred will receive for the period of any litigation, a return on the amount withheld which is measured by the return which would have been received by it if the stock remained outstanding.

As I said before, it may also be necessary to require security for the payment of this compensation, unless the Company can show that the assets it proposes to retain are adequate for this as well as for other purposes, including the contingent liabilities, fees and expenses.

Now, Mr. Chairman, there is an additional point to be made that does not relate to the amended Plan but it is something that I feel the record might well show, that might be brought up at this time, in view of the fact that a failure so to do might be embarrassing to us if we have to litigate this question in the District Court.

Page 18 of the Commission's opinion, it is stated, in effect, that all of the participants in this case agree that the Engineers liquidation is necessary under the Act.

At the trial before the Trial Examiner and in our briefs, and at the oral argument, we have consistently maintained that there was no impelling necessity by reason of the Act, or otherwise, for the dissolution of Engineers. Although we grant the Company's right under its charter to call the preferred for redemption, or to voluntarily liquidate, we believe that the record demonstrates that Engineers could well be continued, although, of course, with a contracted capital structure.

Dr. Badger, our expert witness, testified that Engineers could distribute the El Paso common, sell the Gulf States stock as contemplated, and with the use of only $40,000,000 of treasury cash could call all the preferred stock except 99,863 shares of the $5 preferred, with annual dividend requirements of slightly less than $500,000, which amount Dr. Badger said would be well within the earnings available

from Virginia if Engineers either remained as a holding company over Virginia, or if it were merged with that Company.

We still believe that actually the business of Engineers is continuing and that Engineers is merely voluntarily dissolving, within the meaning of its charter.

Of course, as far as this Commission is concerned, your findings that the preferred is entitled to the redemption price under the Act makes our contention academic here, but I think that the record should show our position clearly, so that we might not be embarrassed in the District Court.

The Chairman: Thank you, Mr. Condon.

Mr. Scheetz: Mr. Chairman, may I say a word?

ORAL ARGUMENT OF FRANCIS H. SCHEETZ.

Mr. Scheetz: It does seem to me that Mr. Condon's point with respect to the Division D clause 3 of the Plan is well taken, because it does not provide that the enforcing order of the Court shall have become final, and obviously, under the language of the Plan the Company could deposit the money for the payment of the preferred prior to the time when the order did become final.

I had presumed when I read the Plan first, of course, that Engineers would not be putting up the money until they were assured that the Plan would be approved, and there would be no litigation and in that event I assumed that the Engineers' preferred would continue to carry its dividend, so that practically it may come out to that end, but actually, as you do read the Plan there is the potential deficiency on that point.

The Chairman: All right, Mr. Kanton.

ORAL ARGUMENT BY MR. KANTON.

Mr. Kanton: May it please the Commission, in response to Mr. Condon and Mr. Scheetz, Mr. Condon this morning has made, as I see it, three points: He stated that he does not feel that adequate compensation for sums withheld during this period of litigation will be made for the preferred stockholders and in the same vein that there will be no guarantee of payment of the full amount to the preferred stockholders and that there is a possibility of Engineers dropping out of the picture and being relieved of all obligations. Now, at this point of the record, with the amendments to Engineers' plan now before us, it appears that Engineers—and I will let Mr. Tucker talk for himself on that point—does not wish to contest the payment to the preferred stockholders. If the Commission approves the amended plan and the amended plan goes before the District Court all parties will be given an opportunity, all interested persons will be given an opportunity to present their views. Now, let's say, for instance, that the District Court affirms the Commission's opinion or the amended plan which is approved by the Commission. At that point, if the preferred stockholders were paid out $110 and there was adequate compensation left to reimburse counsel for their fees and expenses, I don't see how any harm could be done to anyone, including preferred counsel or common counsel. However, at that point there is a possibility that either a preferred stockholder or a common stockholder or even the Commission itself may object to the District Court's opinion in connection with this amended plan. Now, at that point I would feel—and I would strongly recommend, unless counsel who possibly might feel that they had an appeal either waived an appeal or else unless an escrow agreement, as this Commission set forth very fully and in detail on Page 36 of this opinion, were entered into, that we couldn't go forward with the plan at that point, and I doubt very much that counsel for the company

would want to go forward at that point, in case there were an opinion by the District judge that there may be a litigation further on. In fact, if we felt that the District judge in approving the plan, in approving, say, a payment of $110 to the preferred stockholders, felt that such payments would be made, I am sure that the Commission counsel would ask for a stay of any payment to the preferred stockholders or that payment would be made to the preferred stockholders of $100 a share and the rest be placed in escrow, and in that event, like was done in the Laclede case, the rest of the Engineers' plan would be consummated, El Paso, Gulf States and Virginia would be passed out, but there would still be the protection, and I am sure the Commission would insist upon it, as so fully explained in our opinion, but I don't think that at this time or at this phase of the proceeding, recognizing the inclination of Engineers to go ahead and have this plan consummated in order to comply with demand made of Congress under Section 11(b), that the plan need be further amended in order to have an escrow agreement or something of that sort set up.

The Examiner: Do you wish to add anything, Mr. Tucker?

Mr. Tucker: Well, perhaps a little. I think, from the point of view of Engineers, I would like us to stand where we are and ask the Commission to approve the plan as amended by Amendments No. 5 and 6. I don't think it is necessary at this time to set up a lot of bugaboos about it. We can amend the plan readily later on if it becomes necessary to amend the plan, but it may not become necessary to amend it. It may be that these common stockholders will decide that they don't want to litigate. It seems to me if the Commission applies, as they are requested to apply, to the District Court for enforcement of the plan and the District Court hears argument and approves the plan, approves the order of the Commission—let's see what develops at that time. It still could be amended if it were necessary to amend it, if an appeal at that time were taken.

It seems to me quite within the realm of possibility that we might all agree that unless a stay was applied for, unless we were prevented from carrying out the plan, that we should go forward with it. The way I feel about it is, I would like it to go forward as it is and if it becomes necessary at that time to amend the plan, it carries its own provision for amendment. It says that as long as the plan is before the Commission it can be amended with the approval of the Commission, as long as it is before the court it can be amended with the approval of both the court and the Commission. Now, we may get into a situation where we will have to separate out these issues, if we can separate them out. I am not at all sure that we can.

I am a little surprised at Brother Condon's statement here this morning that he thinks an escrow arrangement is necessary, because, as I understood his position at the hearing and at the argument and in his brief, it was that if we set up an escrow, as I understood him, he would be unhappy with it unless—and I think I am stating his position, I haven't a copy of his brief here—he would be unhappy with it unless it provided for a continuation of full dividends on the preferred stock of Engineers until the full amount, $100 plus the premium plus dividends were deposited. Wasn't that your position in your brief, Mr. Condon?

Mr. Condon: It was, Mr. Tucker, and it still is and I will still urge that in the District Court. I restricted my remarks this morning to comments with respect to your amendment in so far as it sought to comply with what is my understanding of this Commission's findings and opinion.

Mr. Tucker: Well, I thought that was what your position was, and a more unreasonable or more unrealistic position I can hardly imagine from a legal point of view.

He wants to say that after his preferred stockholders get $100 paid to them in cash that they can go to the bank and get any time, by turning in their certificates—they are

entitled to get 5½ and 6 per cent interest on the money. In other words, he isn't willing that we should set up the usual escrow arrangement, apparently, which provides just that, that we pay $100, cut off the dividends as to the $100, litigate as to the balance and pay on the balance the $3,200,000, which represents in this case the premiums, as the Commission in its own opinion in this case suggested, the 5.3 average dividend until the premium is paid. Even that doesn't please him.

Now, this point that Mr. Condon makes with respect to some provision for continuation of the full dividends on this preferred stock after we make the deposit seems to me is another extremely illogical position for him to be taking. We could, if we wanted to, I take it—nobody at least has questioned the possibility that this could be done—we could call this preferred stock. In that event what would we do? We would give thirty days' notice of the call, we would take approximately $40,000,000 or $42,000,000, whatever it is, to a solvent bank and trust company, we would deposit the money with the bank and by virtue of that deposit, so long as we included preferred dividends to the date of deposit—that ends under its charter the responsibility of Engineers Service Company to its preferred stock. Now, you set up a plan that parallels that situation, exactly parallels it, because that is exactly what this plan says, and he is unhappy with respect to that. Now, it seems to me that once we get the money deposited in trust with a solvent bank and trust company it must be that we have no further obligation with respect to it. Let's canvass the possibilities of that situation after we have made the deposit. What does it mean? It means that if we aren't discharged, if Engineers, by virtue of the deposit in accordance with the plan, isn't discharged it has to withhold all of these distributions, as far as I can see it, until all of the preferred stockholders have come and gotten their money, because until they do you don't know.

whether they are coming to get it or not. You don't know whether the bank is going broke or whether it isn't. Now, I say that when we patented the plan—and I submit that we did—when we patented the plan after the exact situation that would have happened, if we had called the stock for payment certainly it is fair to the preferred stockholders and we have no criticism or objection about it. What this says is that Engineers will deposit in trust for the benefit of its preferred stockholders with a solvent bank or trust company an amount equal to $105 per share plus accrued dividends to the date of such deposit for each share of $5 preferred and $110 per share plus accrued dividends to the date of such deposit for each share of the $5.50 preferred and the $6 preferred not surrendered in exchange pursuant to Section B, Paragraph 1, and will give to all holders of such preferred stock five days' notice of such deposit at their respective registered addresses and such notice shall state that upon surrender by the preferred stockholders of their certificates for preferred stock to the transfer agent they will be paid the amounts that I have above specified, and I won't go on and read it, and that from and after the date of such deposits dividends on the preferred stock will cease and terminate and such deposits will be in cancellation of the whole of the outstanding preferred stock of Engineers. That is exactly the same thing that would happen if we called the stock and deposited the money. Now, why the preferred stockholders in this case should ask for more when all we are doing is trying to pay them off at par plus the premiums plus the dividends I don't understand and I think the plan as it stands is as fair in that respect as it possibly could be and not subject to objection.

Now, it may be, on the second point that Mr. Condon mentioned with respect to the Engineers' liquidation being necessary under the Act, that he didn't agree to it, I don't know. It says in the opinion that he did, but I don't see

that it makes much difference whether he agreed to it or whether he didn't. Perhaps he should come in and ask to have that statement taken out, but the Commission in effect finds that a continuation of Engineers over Virginia alone, which will be the situation after the El Paso and Gulf States distributions here—Engineers would be, to quote my words, in effect, an economic monstrosity, and the Commission does find in the December 4 opinion that its dissolution is necessary. Now, what he is objecting to apparently is that there may be some misstatement about his position and I don't care whether he asks the Commission to change that, but certainly the Commission has no occasion for changing its findings in that respect at all. It seems to me quite consistent with the truth of the situation, so I say that I think this thing should be approved as it is filed. I see no reason why it shouldn't be approved as it is filed, and let's see what develops. If it does develop that we have to have a long period of litigation, perhaps the plan will have to be amended to provide for an escrow. Maybe that won't happen. It can be done when and if the occasion arises for doing it. I don't think now is the time to do it and I think that the plan is perfectly fair without it and, in fact, as the plan is set up right now it seems to me that it gives these gentlemen everything they were asking and contending for and if during the hearings in this case I had offered them this plan I am quite sure that they would have all agreed that it is a fine idea and "we will take it," but they must keep on, I suppose, objecting and it seems to me that there is little, if any, substance in these objections.

The Chairman: Thank you, Mr. Tucker.

Any further—Mr. Scheetz?

Mr. Scheetz: After hearing Mr. Kanton and Mr. Tucker on that point about the decree becoming final, I think I will withdraw my objection to that. I have had some experience with having such a provision and I would be quite

content to go along with the arrangement suggested, confident that Engineers won't go ahead if they are threatened with litigation and the escrow arrangement could be set up.

Mr. Condon: May I respond most briefly?

I would like to correct one impression that I am sure Mr. Tucker gave to the Commission inadvertently, that I have ever contended at any time that the preferred stockholders were entitled to receive $100 in cash and to get dividends on the $100 during the course of the litigation. I am quite sure that his better judgment will indicate that that has never been my position. I do think the record as it stands now and after hearing Mr. Kanton and Mr. Tucker it is not denied that the plan fails signally to carry out one of the prerequisites of this Commission's opinion, to wit, providing a way of recompensing the preferred stockholders for the losses they will or may have during this period of litigation. There is no denial of that. I think it should be clearly understood that the sole effect of Mr. Tucker's argument is, "Well, perhaps the common stockholders will not appeal and, if they do, we will treat that problem when it comes up." Now, I say that that sale should carry out the mandate of this Commission as expressed in its findings and opinion. It also fails to carry out what Judge Leibell indicated was our right in the Electric Bond and Share case.

Mr. Kanton: If no one else wishes to be heard, I would move that the record be closed, unless you have a word, Mr. Tucker.

The Chairman: Do you wish to say something, Mr. Tucker?

Mr. Tucker: I would like to answer that statement that Mr. Condon just made. I want to point out that under this plan whenever we do make the deposit we have to include in it dividends to the date of deposit. I just read it. That is what it says. Now, I say after we have made the deposit it is out of our control. It seems to me that it

is absurd to say that Engineers should have any more responsibility after that. Now, it seems to me that that is where this plan provides for compensation to these preferred stockholders, it provides that when the deposit is made it has to carry the dividends to that date; and what more can one ask for? Now, if Mr. Condon has the fear that there may be litigation after we have made the deposit I say that is too bad, that is a risk that he has to take. I don't see how Engineers can take it. We can't go ahead and carry out this program and not be sure that we are relieved of any further obligation to the preferred stockholders.

The Chairman: I feel sure the Commission is fully aware of your position.

Mr. Schorr: Mr. Commissioners, I would like to know at this time if the Commission will hear further argument about the payment of premiums, or is that a closed issue?

Mr. Kanton: I would object to such argument at this time, Mr. Chairman, for the reason that we have had hearings on this matter now almost a year and a half and the matter has been explored fully and competently by the management of Engineers and if you have read the opinion of the Commission you will see that that has been considered and I see no reason now to keep this record open to have any further argument on that subject, sir.

The Chairman: Do you wish to make a motion?

Mr. Kanton: I make a motion, sir, that the hearing be closed.

The Chairman: The hearing is closed.

(Whereupon, at 11:35 o'clock a. m., the hearing in the above matter was closed.)

ENGINEERS PUBLIC SERVICE COMPANY

(Incorporated)

Plan Pursuant to Section 11(e) of the

PUBLIC UTILITY HOLDING COMPANY ACT OF 1935 FOR DIVESTMENT OF ASSETS AND RELATED MATTERS

DIVISION A

Purposes of Plan

Part I has the following purposes:

1. Compliance with orders of the Securities and Exchange Commission ("the Commission") directing the divestment by Engineers Public Service Company (Incorporated), ("Engineers") of its interest in El Paso Electric Company ("El Paso") and Gulf States Utilities Company ("Gulf States").

2. The retirement of the Preferred Stock of Engineers at $100 per share and accrued dividends (the question as to whether or not any additional amount is payable to such Stockholders to be determined under Part II).

Part II has the following purpose:

The purpose of Part II is to request the Commission to issue a separate order finding that it is fair and equitable to the Preferred Stockholders of Engineers to pay $100 per share plus accrued dividends to the date of deposit in trust of funds therefor in complete liquidation of their stock. (This Part of the Plan

provides, in the event the Commission finds that some additional amount shall be payable, for the automatic amendment of this Part so as to provide for such additional payment, preserving to Engineers, however, the right to apply for a review of any order providing for or requiring any additional payment.)

Part III has the following purpose:

The purpose of Part III is to terminate the existence of Engineers as a separate corporation within one year after Engineers' liabilities have been determined and liquidated or otherwise provided for.

DIVISION B

Introductory Statement

Engineers, organized and existing under the laws of the State of Delaware, is a registered holding company under the Public Utility Holding Company Act of 1935 ("the Act"). Engineers holds the following securities:

150,000 shares of Common Stock without par value of El Paso, being all of the authorized and issued Common Stock of said Company. These shares are to be reclassified into 381,994 shares of Common Stock, without par value, prior to the consummation of Part I of the Plan.

280,000 shares of Common Stock without par value of Gulf States, being all of the issued Common Stock of said Company, there being 20,000 shares of such Common Stock authorized but unissued. The 280,000 outstanding shares of Common Stock are to be reclassified into 1,909,968 shares of Common Stock, without par value, prior to the consummation of Part I of the Plan.

Engineers' Exhibit No. 1 (Cont'd)

2,932,065 shares of Common Stock without par value of Virginia Electric and Power Company ("Virginia"), there being, in addition, 6,360 shares of such Common Stock in the hands of the public and 20 shares of such Common Stock reserved for scrip and 1,061,555 shares of such Common Stock authorized but unissued.

$563,800 principal amount of 5% note payable and 15,000 shares of capital stock of the par value of $40 per share of The Western Public Service Company ("Western"), being all of the authorized and outstanding amounts of such securities.

Engineers has outstanding the following securities:

143,951 shares of $5 Dividend Convertible Preferred Stock ("$5 Preferred") without par value, entitled to receive $100 per share, plus accrued dividends, in involuntary liquidation and $105 per share, plus accrued dividends, on redemption or voluntary liquidation.

183,406 shares of $5.50 Cumulative Dividend Preferred Stock ("$5.50 Preferred") without par value, entitled to receive $100 per share, plus accrued dividends, in involuntary liquidation and $110 per share, plus accrued dividends, on redemption or voluntary liquidation.

65,098 shares of $6 Cumulative Dividend Preferred Stock ("$6 Preferred") without par value, entitled to receive $100 per share, plus accrued dividends, in involuntary liquidation and $110 per share, plus accrued dividends, on redemption or voluntary liquidation.

1,909,968 shares of Common Stock of the par value of $1 per share.

Engineers' Exhibit No. 1 (Cont'd)

Early in 1940 the Commission brought a proceeding against Engineers and its subsidiaries under Section 11(b)(1) of the Act. This Section provides for the restriction of integrated systems and incidental businesses which a holding company may control. On July 23, 1941, the Commission issued an order in that proceeding directing Engineers to dispose of its interest in The Key West Electric Company and Puget Sound Power & Light Company. This order has been fully complied with. On December 29, 1941, the Commission issued a further order under Section 11(b)(1) directing Engineers to dispose of its interest in Missouri Service Company, The Northern Kansas Power Company and Western. Engineers' interests in Missouri Service Company and The Northern Kansas Power Company have been sold and it is expected that Western will be offered for sale shortly. On September 16, 1942 and October 6, 1942, the Commission issued further orders under the same Section directing Engineers to dispose of all of its remaining investments except that in Virginia, which, if retained, must dispose of its gas and transportation operations. Engineers has complied with these 1942 orders by disposing of all of the investments ordered divested by those orders except its investments in Gulf States, El Paso and Virginia and with respect to the latter two companies, has partially complied with said orders by the disposal of their transportation properties. Engineers filed a petition with the United States Court of Appeals for the District of Columbia for a review of the 1942 orders and on November 22, 1943, the Court set these orders aside and remanded the case to the Commission for further proceedings in accordance with its opinion. Both the Commission and Engineers have applied to the Supreme Court of the United States for writs of certiorari which have been granted. The hearing in the Supreme Court has been delayed for lack of a quorum of Justices to hear the case. The appointment of a Justice to fill the vacancy caused by the recent resignation of Justice Roberts may

Engineers' Exhibit No. 1 (Cont'd)

make possible the hearing and decision of the case in the near future. It is not expected that any portion of this Plan shall be consummated until after the decision of this case.

There are annexed hereto the following financial statements of Engineers and its subsidiaries:

EXHIBIT A—Engineers balance sheet as at June 30, 1945, and income statement for the twelve months ended June 30, 1945, actual and pro forma giving effect to the consummation of Parts I and II of the Plan as proposed.

EXHIBIT B—Engineers and subsidiary companies consolidated balance sheet as at June 30, 1945 and consolidated income statement for the twelve months ended June 30, 1945, actual and pro forma giving effect to the consummation of Parts I and II of the Plan as proposed and to income tax adjustments made on the books of Virginia in August, 1945.

EXHIBIT C—Comparative balance sheets of Virginia, Gulf States and El Paso as at June 30, 1944 and June 30, 1945 and income statements for the 12 months ended June 30, 1944 and June 30, 1945.

EXHIBIT D—Income statements of Virginia, Gulf States and El Paso for the years 1939 through 1944.

EXHIBIT E—Income statements of Gulf States for the years 1939 through 1945 (last six months of 1945 estimated) pro forma giving effect to present fixed charges and preferred dividends and proposed number of shares of Common Stock.

Engineers' Exhibit No. 1 (Cont'd)

DIVISION C

The Plan

Part I

1. Engineers will sign an agreement with a bank to borrow, subject to the consummation of Part I of the Plan, $3,000,000 on a two-year note, payable $750,000 semi-annually. The agreement will provide that Engineers shall not, until the bank loan is fully paid, pay any dividends in cash on its Common Stock, or make any other distribution in respect thereof other than such as may be provided for in this Part I of the Plan. Provision will be made in this agreement to permit, if needed, the borrowing of additional amounts, which provision may be availed of, in the event Western is not sold before the effective date of Part I of the Plan or in the event that some delay is involved in selling shares of Gulf States Common Stock not subscribed for under subscription warrants or for any other reason.

2. Engineers will issue warrants to Common Stockholders of record on a date to be fixed by the Board of Directors of Engineers, each of which warrants will evidence the right to purchase from Engineers 1 share of Gulf States Common Stock at a subscription price of $11.50 per share for each share of Engineers Common Stock held by such Stockholder on such record date. The warrants must be exercised on or before a specified date (to be approximately three weeks after the date of mailing warrants). All warrants will be registered in the names of the Common Stockholders and will be transferable on the books of Engineers. Such warrants will be issued and distributed without the surrender by the Common Stockholders of Engineers of their Common Stock.

Engineers' Exhibit No. 1 (Cont'd)

3. Engineers will declare Part I of the Plan effective upon the expiration of the period during which subscription warrants can be exercised if 90% (or such lower percentage as shall be acceptable to Engineers) of all warrants are exercised, and, if and when Part I of the Plan is declared effective, the Transfer Agent will mail or deliver certificates for Gulf States Common Stock. To the extent warrants are not exercised, Engineers will sell shares of Gulf States Common Stock represented thereby as promptly thereafter and in such manner as the Board of Directors of Engineers deems to be in the best interests of Engineers, subject to the obtaining of the requisite regulatory approvals.

4. Engineers will issue its note to bank.

5. Engineers will deposit in trust for the benefit of its Preferred Stockholders with a solvent bank or trust company $39,245,500 plus an amount equal to accrued dividends on its Preferred Stock to the date of such deposit and give to its Preferred Stockholders five days' prior notice of such deposit at their respective registered addresses, and such notice shall state that upon surrender by the Preferred Stockholders of their certificates for Preferred Stock to the Transfer Agent, they will be paid $100 per share plus such accrued dividends; and from and after the date of such deposit, dividends on the Preferred Stock will cease and determine. Such distribution will be in cancellation of the whole of the outstanding Preferred Stock of Engineers and thereafter the only right remaining to the registered holder of each certificate of Preferred Stock will be the right to receive an additional amount if any is determined to be payable (See Part II). The President or a Vice President, and the Secretary or an Assistant Secretary of Engineers shall, without further action by Direc-

Engineers' Exhibit No. 1 (Cont'd)

tors and Stockholders of Engineers, file a certificate or certificates of Engineers reflecting the elimination of the capital represented by the Preferred Stock and the elimination of the authorized Preferred Stock in the Office of the Secretary of State of the State of Delaware and shall record in the Office of the Recorder of Deeds of New Castle County, Delaware, a copy or copies thereof certified by the Secretary of State.

6. Engineers will distribute as a dividend in partial liquidation Common Stock of El Paso pro rata to the Engineers Common Stockholders on the basis of 1/5th of a share of El Paso Common Stock for each share of Engineers Common Stock. No fractional shares of Common Stock will be issued or delivered, but in lieu thereof scrip will be issued and delivered. Such distribution, issue and delivery will be without the surrender by the Common Stockholders of Engineers of their Common Stock. Such scrip will not be entitled to dividends, voting rights or any other stockholders' rights. When combined in lots aggregating one or more full shares of stock, scrip may, up to the date of sale (hereinafter in this paragraph described) of such shares of stock, be exchanged for such shares, together with any dividends which shall have been paid to Stockholders of record on any date subsequent to the effective date of this Part I of the Plan. Engineers will undertake to provide facilities whereby any holder of scrip certificates may dispose of such scrip, or acquire additional scrip so as to enable the holder to exchange such scrip for full shares of stock. All shares of stock reserved for issuance and delivery upon the exchange of scrip which shall not have been issued or delivered in connection with such exchange within two years after the effective date of this Part I, shall, promptly after

Engineers' Exhibit No. 1 (Cont'd)

the expiration of such period, be sold by the Transfer Agent and the Transfer Agent shall, as soon as possible thereafter, distribute to the holders of scrip certificates not theretofore surrendered their proportionate part of the proceeds of sale, plus their proportionate part of any dividends which shall have been declared to holders of record as of a date prior to the date of sale.

7. In order to provide a reserve for the purpose of making the payment, if any, to which Engineers Preferred Stockholders shall, on final determination, be held to be entitled in addition to $100 per share and accrued dividends to the date of the deposit provided for in paragraph 5 of this Part I, Engineers will retain its interest in the Virginia Common Stock until such a final determination is made.

8. Epsco, Inc., the mutual service corporation, will cancel its service contracts with Engineers, Virginia, Gulf States and El Paso.

Engineers believes and alleges that the approval of this Part I of the Plan is necessary for compliance with the orders issued by the Commission on September 16, 1942 and October 6, 1942 under Section 11 of the Act and to effectuate the provisions of subsection (b) of Section 11 of the Act and fair and equitable to the persons affected thereby, and if the Commission shall find Part I of the Plan necessary to effectuate the provisions of subsection (b) of Section 11 of the Act and fair and equitable to the persons affected thereby, Engineers prays that the Commission shall enter a separate order approving Part I of the Plan containing a recitation that the relevant transactions of Part I of the Plan are necessary or appropriate to the integration or simplification of the holding company system of which Engineers is a member and necessary or appropriate to effectuate the provisions of subsection (b) of Sec-

tion 11 of the Act, all in accordance with the meaning and requirements of the Internal Revenue Code, as amended, including Sections 371 and 1808(f) and Supplement R thereof.

Part II

Engineers shall pay to its Preferred Stockholders no amount in addition to the $100 per share, plus accrued dividends to the date of deposit, provided to be paid under Part I of this Plan.

Engineers believes and alleges that the approval of this Part II of the Plan is necessary, if Part I of the Plan is consummated, to effectuate the provisions of subsection (b) of Section 11 of the Act and fair and equitable to the persons affected thereby, and if the Commission shall find Part II of the Plan necessary to effectuate the provisions of subsection (b) of Section 11 of the Act and fair and equitable to the persons affected thereby, Engineers prays that the Commission shall enter a separate order approving Part II of the Plan.

To the end that there may be determined by the Commission in the proceedings in connection with Part II of this Plan the amount, if any, which, in the opinion of the Commission, it is fair and equitable that Engineers shall pay to its Preferred Stockholders in addition to $100 per share plus accrued dividends to the date of deposit provided to be paid under Part I of this Plan, Engineers agrees that in the event the Commission shall in any findings or order respecting Part II of this Plan find that it is not fair and equitable to the persons affected thereby that Engineers shall pay to its Preferred Stockholders no amount in addition to $100 per share plus accrued dividends to the date of deposit provided to be paid under Part I of this Plan and shall in such findings or order specify an amount in addition thereto which Engineers should pay to its Preferred Stockholders, then and in such events this Part II

of the Plan shall be and thereby become automatically amended so as to provide that Engineers shall pay to its Preferred Stockholders such additional amount as the Commission shall have so specified; provided, however, that in respect of any order of the Commission which shall provide that Engineers shall, or require Engineers to, pay to its Preferred Stockholders any amount in addition to $100 per share plus accrued dividends to the date of deposit provided to be paid under Part I of this Plan, Engineers shall be a party aggrieved within the meaning of Section 24 of the Act, and may obtain a review of such order pursuant to said section.

Part III

Within one year after all liabilities of Engineers have been finally determined and liquidated, or otherwise provided for, Engineers will be legally dissolved and liquidated, with the Common Stock of Virginia and the other remaining assets of Engineers being distributed pro rata to the Engineers Common Stockholders, or Engineers will be merged with Virginia with the Engineers Common Stockholders receiving their pro rata interest in the merged Company.

Engineers believes and alleges that the approval of this Part III of the Plan is necessary to effectuate the provisions of subsection (b) of Section 11 of the Act if Parts I and II of the Plan are consummated and fair and equitable to the persons affected thereby, and Engineers prays that, after Engineers shall have filed an amendment to this Part III of the Plan, supplying the details in connection with the carrying out of this Part III of the Plan, if the Commission shall find Part III necessary to effectuate the provisions of subsection (b) of Section 11 of the Act and fair and equitable to the persons affected thereby, the Commission shall enter a separate order approving Part III of the Plan containing a recitation that the relevant transac-

tions of Part III of the Plan are necessary and appropriate to the integration or simplification of the holding company system of which Engineers is a member and necessary or appropriate to effectuate the provisions of subsection (b) of Section 11 of the Act in accordance with the meaning and requirements of the Internal Revenue Code, as amended, including Sections 371 and 1808(f) and Supplement R thereof.

DIVISION D

Conditions to Effectuation of the Plan

Part I

The effectuation of Part I of the Plan is dependent upon the satisfaction of the following conditions:

1. Gulf States shall have reclassified its Common Stock into 1,909,968 shares of Common Stock, without par value; Gulf States shall have given to its Preferred Stock seven votes per share instead of the one vote per share it now carries; and El Paso shall have reclassified its Common Stock into 381,994 shares of Common Stock, without par value.

2. The Commission shall have issued the order prayed for in Part I of this Plan.

3. The Commission when requested by Engineers, shall have instituted a proceeding in a court of competent jurisdiction pursuant to Section 11(e) of the Act and such court shall have entered a separate decree or order finding Part I of the Plan to be fair and equitable and appropriate to effectuate the provisions of Section 11 of the Act and such court shall have taken action to enforce and carry out the terms and provisions of Part I of the Plan.

4. There shall have been obtained from the United States Treasury Department (unless Engineers, in its dis-

cretion, shall waive this condition) a closing agreement or ruling or closing agreements or rulings as to the tax consequences of the transactions necessary to carry out Part I of the Plan and such agreements or rulings shall be satisfactory to counsel for Engineers.

5. Any corporate action in connection with Part I of the Plan, which may be deemed necessary by counsel for Engineers shall have been carried out in a manner satisfactory to such counsel.

6. Authorization satisfactory to counsel for Engineers shall have been given for the carrying out of Part I of the Plan and for the issuance for all securities provided to be issued pursuant to Part I by the Plan, by all regulatory commissions, the consent of which is legally necessary.

7. Engineers shall have made arrangements to borrow requisite funds to enable it, together with cash on hand and cash from the exercise of the warrants, to pay $100 per share plus accrued dividends to the date of deposit on the outstanding Engineers Preferred Stock.

8. At least 90% (or such lower percentage as shall be acceptable to Engineers) of the shares of Gulf States Common Stock shall have been purchased under the subscription warrants referred to in paragraph 2 of Part I of the Plan.

Part II

The effectuation of Part II of the Plan is dependent upon the satisfaction of the following conditions:

1. The Commission shall have taken the requisite action under Part II of this Plan.

2. Part I of the Plan shall have been consummated.

Engineers' Exhibit No. 1 (Cont'd)

Part III

The effectuation of Part III of the Plan is dependent upon the satisfaction of the following conditions:

1. The Commission shall have issued the order prayed for in Part III of this Plan.

2. There shall have been obtained from the United States Treasury Department (unless Engineers, in its discretion, shall waive this condition) a closing agreement or ruling or closing agreements or rulings as to the tax consequences of the transactions necessary to carry out Part III of the Plan, and such agreements or rulings shall have been satisfactory to counsel for Engineers.

3. Authorization satisfactory to counsel for Engineers shall have been given for the carrying out of Part III of the Plan and for the issuance of all securities provided to be issued pursuant to Part III of the Plan by all regulatory Commissions, the consent of which is legally necessary.

4. Any corporate action in connection with Part III of the Plan which may be deemed necessary by counsel for Engineers shall have been carried out in a manner satisfactory to such counsel.

DIVISION E

Amendments to the Plan and Other Provisions

Until approved by the Commission, the Plan or any Part thereof may be modified or amended in any respect or particular by Engineers. After being approved by the Commission and before being approved by a court, the Plan or any part thereof may be modified or amended in any respect or particular by Engineers with the approval of the Commission. After the approval by the Court and

before any Part of the Plan has been consummated, pursuant to the order or decree of a court of competent jurisdiction, such Part may be modified or amended in any respect or particular by Engineers with the approval of both the Commission and the Court. No amendments to the Plan or any Part thereof shall be made without the consent or agreement of Engineers.

Engineers may employ such agents, attorneys or others as it may deem desirable for the purpose of carrying out the Plan or any Part thereof. Engineers may from time to time delegate to others any power or discretion conferred upon it by the Plan.

The statements, opinions and conclusions contained in the Plan or in the Exhibits thereto, are intended solely for the purpose of assisting the Commission, any court and the Stockholders in any steps or proceedings with respect to the Plan and are not intended for use or information by prospective purchasers of the securities whether now existing or proposed to be issued or for any purposes other than the purposes set forth in this paragraph; and no one is authorized to make any statements regarding the Plan, whether with reference to any securities referred to herein or otherwise which are not set forth herein or in said Exhibits.

Figures appearing in this Plan have been compiled from those shown on the books of Engineers or its subsidiaries or predecessors. All figures reported not previously audited are subject to such adjustments as the annual audit by independent accountants may disclose to be necessary. Engineers, in publishing the information contained herein, does not make or intend to make any representation whatsoever as to the value of the assets or any of them shown in the balance sheets.

Engineers' Exhibit No. 1 (Cont'd)

DIVISION F

Reservation of Rights

In filing this Plan, Engineers does so solely under compulsion and upon the basis that such Plan constitutes a means whereby Engineers may comply with the orders of the Commission entered on September 16, 1942 and October 6, 1942 and otherwise comply with the Act. This Plan is filed without waiver and with full reservation of all constitutional and legal rights of Engineers and its subsidiaries to attack the validity and legality of any section or any subdivision of any section of, or any order, rule or regulation under, the Act, including, without limitation, the right to proceed with argument of their case involving Section 11 of the Act pending in the Supreme Court of the United States at any time hereafter when a quorum of such court may be available to participate in the decision of such case, and it is respectfully requested that the Commission's order or orders herein shall reserve to Engineers and its subsidiaries the rights hereinabove referred to.

Engineers Public Service Company
(Incorporated)

By D. C. Barnes,
President

Engineers' Exhibit No. 2.

SECURITIES AND EXCHANGE COMMISSION
Eighteenth and Locust Streets
Philadelphia 3, Pennsylvania

ENGINEERS PUBLIC SERVICE COMPANY
(Incorporated)
File No. 54-132
Amendment No. 1 To Application Dated September 10, 1945

Engineers Public Service Company (Incorporated) hereby amends the Plan pursuant to Section 11(e) of the Public Utility Holding Company Act of 1935 for Divestment of Assets and Related Matters of Engineers Public Service Company (Incorporated) filed as Exhibit A to application dated September 10, 1945, as follows:

1. Strike paragraphs 2 and 3 of Part I of Division C of said Exhibit A and insert in lieu thereof the following:

"2. Engineers will mail warrants to its Common Stockholders of record on a date to be fixed by the Board of Directors of Engineers, each of which warrants will evidence the right to purchase from Engineers one share of Gulf States Common Stock at the subscription price of $11.50 per share for each share of Engineers Common Stock held by such Common Stockholder on such date, payable in United States funds or in whole shares of Engineers Preferred Stock at the rate of $100 per share plus accrued dividends to the expiration date of the subscription period, with cash adjustment for balance, if any, of the subscription price, provided, however, that the Board of Directors of Engineers may withhold the mailing of such warrants in the event that, in its opinion, market conditions are such as to render it inadvisable to proceed with the issuance of the warrants. Upon the mailing of such warrants, Part I of the Plan shall be deemed to be effective. The

Engineers' Exhibit No. 2 (Cont'd)

warrants must be exercised on or before a specified date (to be approximately ten days after the date of mailing warrants). All warrants will be registered in the names of the Common Stockholders and will be transferable on the books of Engineers. Such warrants will be issued and distributed without the surrender by the Common Stockholders of Engineers of their Common Stock. Any holder of Engineers Preferred Stock who surrenders his stock in payment of the above subscription price will, in respect of such surrendered shares, retain the right to receive the same amount which Stockholders depositing their stock under the provisions of paragraph 5 of this Part I shall receive, in addition to $100 per share plus accrued dividends to the date of deposit therein provided for, if any such amount is determined to be payable.

"3. The Transfer Agent will mail or deliver certificates for Gulf States Common Stock to those persons who exercised the subscription warrants. To the extent warrants are not exercised, Engineers will sell shares of Gulf States Common Stock represented thereby as promptly thereafter and in such manner as the Board of Directors of Engineers deems to be in the best interests of Engineers, subject to the obtaining of the requisite regulatory approvals."

2. Strike paragraph 8 of Part I of Division D of said Exhibit A and insert in lieu thereof the following:

"8. The subscription warrants referred to in paragraph 2 of Part I of the Plan shall have been mailed to Engineers Common Stockholders."

This amendment is filed subject to the reservations set forth in Division F of said Exhibit A.

Pursuant to the requirements of the Public Utility Holding Company Act of 1935, the Company set forth below caused this instrument to be duly executed on its behalf by

Engineers' Exhibit No. 2 (Cont'd)

its authorized officers on this the 12th day of September, 1945.

ENGINEERS PUBLIC SERVICE COMPANY

ENGINEERS PUBLIC SERVICE COMPANY
(Incorporated)

File No. 54-132

Amendment No. 2 to Application Dated September 10, 1945

Engineers Public Service Company (Incorporated) hereby amends the Plan pursuant to Section 11(e) of the Public Utility Holding Company Act of 1935 for Divestment of Assets and Related Matters of Engineers Public Service Company (Incorporated) filed as Exhibit A to application dated September 10, 1945, as follows:

1. Revoke Amendment No. 1 which is superseded in its entirety by Amendment No. 2.

2. Strike paragraphs 2, 3 and 5 of Part I of Division C of said Exhibit A and insert in lieu thereof the following:

"2. Engineers will mail warrants to its Common Stockholders of record on a date to be fixed by the Board of Directors of Engineers, each of which warrants will evidence the right to acquire from Engineers shares of Gulf States Common Stock on the basis of one share of Gulf States Common Stock for each share of Engineers Common Stock held by such Stockholders on such date either

(a) by purchasing from Engineers whole shares of such Gulf States Common Stock at the rate of $11.50 per share, payable in United States funds, or in the alternative,

(b) by exchanging with Engineers whole shares of Engineers Preferred Stock for shares of

Engineers' Exhibit No. 3 (Cont'd)

Gulf States Common Stock on the basis of equivalent values, assigning $11.50 per share for each share of Gulf States Common Stock and $100 plus accrued dividends to the expiration date of the warrant for each share of Engineers Preferred Stock; provided that, on the basis of the relative values above stated, the value of the whole shares of Engineers Preferred Stock surrendered in exchange shall not exceed the value of the shares of Gulf States Common Stock which the warrant holder is entitled to and intends to acquire, but to the extent that the value of such shares of Engineers Preferred Stock surrendered in exchange is less than the value of such shares of Gulf States Common Stock to which the warrant holder is entitled to and intends to acquire, the excess shall be paid by the warrant holder to Engineers in United States funds. Any holder of Engineers Preferred Stock who surrenders his stock in exchange for Gulf States Common Stock will, in respect of such surrendered shares, retain the right to receive the same amount which stockholders surrendering their stock under the provisions of Paragraph 5 of this Part I shall receive, in addition to $100 per share plus accrued dividends to the date of deposit therein provided for, if any such amount is finally determined to be payable.

The Board of Directors of Engineers may, however, withhold the mailing of such warrants in the exent that, in its opinion, market conditions are such as to render it inadvisable to proceed with the issuance of the warrants. Upon the mailing of such warrants, Part I of the Plan shall be deemed to be effective. In cases where the addresses of such Stockholders are outside continental United States and Canada, warrants will not be mailed to Common

Engineers' Exhibit No. 3 (Cont'd)

Stockholders of this Company of record on such date but will be held against instructions of the record owners, or their duly authorized agents, until the opening of business on the day before the expiration date of the warrant period, at which time all warrants so held with respect to which no such instructions have been received may be sold by the Company and the pro rata share of the aggregate net proceeds, if any, remitted to each Stockholder on whose behalf warrants are so sold, or, in cases where such remittance is not lawful, held for the account of each such Stockholder subject to payment upon receipt of lawful instructions. The warrants must be exercised on or before a specified date (to be approximately ten days after the date of mailing warrants). All warrants will be registered in the names of the Common Stockholders and will be transferable on the books of Engineers. Such warrants will be issued and distributed without the surrender by the Common Stockholders of Engineers of their Common Stock."

"3. The Transfer Agent will mail or deliver certificates for Gulf States Common Stock to those persons who exercise the warrants. To the extent warrants are not exercised, Engineers will sell shares of Gulf States Common Stock represented thereby as promptly thereafter and in such manner as the Board of Directors of Engineers deems to be in the best interests of Engineers, subject to the obtaining of the requisite regulatory approvals.

"'5. Engineers will deposit in trust for the benefit of its Preferred Stockholders with a solvent bank or trust company an amount equal to $100 per share plus accrued dividends to the date of such deposit for each share of Preferred Stock not surrendered in exchange pursuant to (b) of paragraph 2 of this

Engineers' Exhibit No. 3 (Cont'd)

Part I and will give to all holders of such Preferred Stock five days' prior notice of such deposit at their respective registered addresses, and such notice shall state that upon surrender by the Preferred Stockholders of their certificates for Preferred Stock to the Transfer Agent, they will be paid $100 per share plus such accrued dividends; and from and after the date of such deposit, dividends on the Preferred Stock will cease and determine. Such distribution will be in cancellation of the whole of the outstanding Preferred Stock of Engineers and thereafter the only right remaining to the registered holder of each certificate of Preferred Stock will be the right to receive an additional amount if any is determined to be payable (See Part II). The President or a Vice President and the Secretary or an Assistant Secretary of Engineers shall, without further action by Directors and Stockholders of Engineers, file a certificate or certificates of Engineers reflecting the elimination of the capital represented by the Preferred Stock and the elimination of the authorized Preferred Stock in the Office of the Secretary of State of the State of Delaware and shall record in the Office of the Recorder of Deeds of New Castle County, Delaware, a copy or copies thereof certified by the Secretary of State."

3. Strike paragraph 8 of Part I of Division D of said Exhibit A and insert in lieu thereof the following:

"8. The warrants referred to in paragraph 2 of Part I of the Plan shall have been mailed to Engineers Common Stockholders."

This amendment is filed subject to the reservations set forth in Division F of said Exhibit A.

Pursuant to the requirements of the Public Utility Holding Company Act of 1935, the Company set forth below

Engineers' Exhibit No. 3 (Cont'd)

caused this instrument to be duly executed on its behalf by its authorized officers on this the 16th day of October, 1945.

ENGINEERS PUBLIC SERVICE COMPANY
(Incorporated)

File No. 54-132

Amendment No. 3 to Application Dated September 10, 1945

Engineers Public Service Company (Incorporated) hereby amends the Plan pursuant to Section 11(e) of the Public Utility Holding Company Act of 1935 for Divestment of Assets and Related Matters of Engineers Public Service Company (Incorporated) filed as Exhibit A to application dated September 10, 1945, as follows:

1. Revoke Amendment No. 2 which is superseded in its entirety by Amendment No. 3.

2. Strike paragraphs 2, 3 and 5 of Part I of Division C of said Exhibit A and insert in lieu thereof the following:

"2. Engineers will mail warrants to its Common Stockholders of record on a date to be fixed by the Board of Directors of Engineers, each of which warrants will evidence the right to acquire from Engineers shares of Gulf States Common Stock on the basis of one share of Gulf States Common Stock for each share of Engineers Common Stock held by such Stockholders on such date either

(a) by purchasing from Engineers whole shares of such Gulf States Common Stock at the rate of $11.50 per share, payable in United States funds, or in the alternative,

(b) by exchanging with Engineers whole shares of Engineers Preferred Stock for shares of

Gulf States Common Stock on the basis of equivalent values, assigning $11.50 per share for each share of Gulf States Common Stock and $100 plus accrued dividends to the expiration date of the warrant for each share of Engineers Preferred Stock; provided that, on the basis of the relative values above stated, the value of the whole shares of Engineers Preferred Stock surrendered in exchange shall not exceed the value of the shares of Gulf States Common Stock which the warrant holder is entitled to and intends to acquire, but to the extent that the value of such shares of Engineers Preferred Stock surrendered in exchange is less than the value of such shares of Gulf States Common Stock to which the warrant holder is entitled and intends to acquire, the excess shall be paid by the warrant holder to Engineers in United States funds. Any holder of Engineers Preferred Stock who surrenders his stock in exchange for Gulf States Common Stock will, in respect of such surrendered shares, retain the right to receive the same amount which stockholders surrendering their stock under the provisions of Paragraph 5 of this Part I shall receive, in addition to $100 per share plus accrued dividends to the date of deposit therein provided for, if any such amount is finally determined to be payable.

The Board of Directors of Engineers may, however, withhold the mailing of such warrants in the event that, in its opinion, market conditions are such as to render it inadvisable to proceed with the issuance of the warrants. Upon the mailing of such warrants, Part I of the Plan shall be deemed to be effective. In cases where the addresses of such Stockholders are unknown or are outside continental United States and Canada, warrants will not be mailed to Common Stock-

Engineers' Exhibit No. 4 (Cont'd)

holders of this Company of record on such date but will be held against instructions of the record owners, or their duly authorized agents, until the opening of business on the day before the expiration date of the warrant period, at which time all warrants so held with respect to which no such instructions have been received may be sold by the Company and the pro rata share of the aggregate net proceeds, if any, remitted to each Stockholder on whose behalf warrants are so sold, or, in cases where such remittance is not lawful or the address is unknown, held for the account of each such Stockholder subject to payment upon receipt of lawful instructions. The warrants must be exercised on or before a specified date (to be approximately ten days after the date of mailing warrants). All warrants will be registered in the names of the Common Stockholders and will be transferable on the books of Engineers. Such warrants will be issued and distributed without the surrender by the Common Stockholders of Engineers of their Common Stock."

"3. The Transfer Agent will mail or deliver certificates for Gulf States Common Stock to those persons who exercise the warrants. To the extent warrants are not exercised, Engineers will sell shares of Gulf States Common Stock represented thereby as promptly thereafter and in such manner as the Board of Directors of Engineers deems to be in the best interests of Engineers, subject to the obtaining of the requisite regulatory approvals.

"5. Engineers will deposit in trust for the benefit of its Preferred Stockholders with a solvent bank or trust company an amount equal to $100 per share plus accrued dividends to the date of such deposit for each share of Preferred Stock not surrendered in

Engineers' Exhibit No. 4 (Cont'd)

exchange pursuant to (b) of paragraph 2 of this Part I and will give to all holders of such Preferred Stock five days' prior notice of such deposit at their respective registered addresses, and such notice shall state that upon surrender by the Preferred Stockholders of their certificates for Preferred Stock to the Transfer Agent, they will be paid $100 per share plus such accrued dividends; and from and after the date of such deposit, dividends on the Preferred Stock will cease and determine. Such distribution will be in cancellation of the whole of the outstanding Preferred Stock of Engineers and thereafter the only right remaining to the registered holder of each certificate of Preferred Stock will be the right to receive an additional amount if any is determined to be payable (See Part II). The President or a Vice President and the Secretary or an Assistant Secretary of Engineers shall, without further action by Directors and Stockholders of Engineers, file a certificate or certificates of Engineers reflecting the elimination of the capital represented by the Preferred Stock and the elimination of the authorized Preferred Stock in the Office of the Secretary of State of the State of Delaware and shall record in the Office of the Recorder of Deeds of New Castle County, Delaware, a copy or copies thereof certified by the Secretary of State."

3. Strike paragraph 8 of Part I of Division D of said Exhibit A and insert in lieu thereof the following:

"8. The warrants referred to in paragraph 2 of Part I of the Plan shall have been mailed to Engineers Common Stockholders."

4. Strike the caption "Taxes—Federal income" and footnote (b) of Exhibit B, page 6, and insert in lieu thereof the following:

Engineers' Exhibit No. 4 (Cont'd)

"Taxes—Federal income (excluding reductions (1) as shown separately below, and (2) of $4,424,813 (pro forma) related to and applied against items charged directly to surplus)."

"(b) Includes provision for estimated excess profits of $1,166,048 after giving effect to reductions (1) as shown separately above and (2) of $4,424,813 related to and applied against items charged directly to surplus."

5. Strike footnote (d) of Exhibit C-2 and insert in lieu thereof the following:

"(d) The Company has covenanted that, so long as any shares of its $4.40 dividend preferred stock remain outstanding, it will not declare or pay any dividend or make any other distribution to the holders of its common stock (other than a dividend in common stock of the Company) except out of net income (as defined in the Company's amended charter) accumulated subsequent to June 30, 1944, after deducting the sum of $18,190 per month in respect of such of the first 120 full calendar months after October 9, 1944 as shall have elapsed; provided, however, that no common stock dividend may be paid in excess of 75% of the net income available as aforesaid, if, after giving effect thereto, the common stock capital and surplus (excluding premiums) would be less than 25% of the Company's capitalization (including surplus but excluding premiums). Earned surplus unrestricted as to common stock dividends amounted to $608,000 at June 30, 1945."

This amendment is filed subject to the reservations set forth in Division F of said Exhibit A.

Pursuant to the requirements of the Public Utility Holding Company Act of 1935, the Company set forth below caused this instrument to be duly executed on its behalf by

Engineers' Exhibit No. 4 (Cont'd)

its authorized officers on this the 9th day of November, 1945.

Engineers' Exhibit No. 9.

ENGINEERS PUBLIC SERVICE COMPANY
(Incorporated)

Information Requested by the Staff of the SEC on October 16, 1945 in Connection with Engineers Section 11(e) Plan is Being Furnished in Schedules Listed Below

Schedule A

Engineers Public Service Company (Incorporated) and subsidiary companies pro forma balance sheet consolidated as at June 30, 1945 giving estimated effect to (A) sale of investment in The Western Public Service Company and miscellaneous adjustments and (B) the consummation of Parts I and II of the Plan.

Schedule A-1

Engineers Public Service Company (Incorporated) and subsidiary companies pro forma balance sheet consolidated as at June 30, 1945 giving estimated effect to miscellaneous adjustments and the consummation of Parts I and II of the Plan but assuming sale of investment in The Western Public Service Company not accomplished prior to consummation of the Plan.

Schedule B.

Engineers Public Service Company (Incorporated) and subsidiary companies pro forma income statement for the 12 months ended June 30, 1945 giving estimated effect to (A) sale of investment in The Western Public Service Company and miscellaneous adjustments and (B) the consummation of Parts I and II of the Plan.

Schedule B-1

Engineers Public Service Company (Incorporated) and subsidiary companies pro forma income statement

Engineers' Exhibit No. 9 (Cont'd)

for 12 months ended June 30, 1945 giving estimated effect to miscellaneous adjustments and the consummation of Parts I and II of the Plan but assuming sale of investment in The Western Public Service Company not accomplished prior to consummation of the Plan.

Schedule C

Engineers Public Service Company (Incorporated) pro forma balance sheet as at June 30, 1945 giving estimated effect to (A) sale of investment in The Western Public Service Company and miscellaneous adjustment and (B) the consummation of Parts I and II of the Plan.

Schedule C-1

Engineers Public Service Company (Incorporated) pro forma balance sheet as at June 30, 1945 giving estimated effect to miscellaneous adjustments and the consummation of Parts I and II of the Plan but assuming sale of investment in The Western Public Service Company not accomplished prior to consummation of the Plan.

Schedule D

Engineers Public Service Company (Incorporated) pro forma income statement for 12 months ended June 30, 1945 giving estimated effect to (A) sale of investment in The Western Public Service Company and miscellaneous adjustments and (B) the consummation of Parts I and II of the Plan.

Schedule D-1

Engineers Public Service Company (Incorporated) pro forma income statement for 12 months ended June 30, 1945 giving estimated effect to miscellaneous ad-

Engineers' Exhibit No. 9 (Cont'd)

justments and the consummation of Parts I and II of the Plan but assuming sale of investment in The Western Public Service Company not accomplished prior to consummation of the Plan.

Schedule E

Engineers Public Service Company (Incorporated) detail of income from miscellaneous investments and miscellaneous revenue shown in the Engineers Corporate Income Statement.

Schedule F

Engineers Public Service Company (Incorporated) and subsidiary companies detail of the calculation of the tax items included in pro forma adjustments No. 1 and No. 2 to balance sheet consolidated as at June 30, 1945.

Schedule G

Detail of subsidiary companies notes payable and an explanation of $626,200 adjustment included in this item in Engineers Public Service Company (Incorporated) and subsidiary companies pro forma balance sheet consolidated as at June 30, 1945.

Schedule H

Explanation of pro forma adjustment No. 10 to Engineers Public Service Company (Incorporated) and subsidiary companies pro forma balance sheet consolidated.

Schedule I

Engineers Public Service Company (Incorporated) and subsidiary companies detail of earnings from other

Engineers' Exhibit No. 9 (Cont'd)

sources in the amount of $84,341 shown in the "Other" column in the combined income statement.

Schedule J

Engineers Public Service Company (Incorporated) and subsidiary companies consolidated income statement showing tax adjustment applied against taxes and reflecting the amortization of plant acquisition adjustments as a deduction from income (below the line).

Schedule J-1

Engineers Public Service Company (Incorporated) and subsidiary companies pro forma consolidated income statement showing tax adjustment applied against taxes and reflecting the amortization of plant acquisition adjustments as a deduction from income (below the line).

* * * * * * * * * * * * *

Additional information requested by the staff of the SEC which is not being supplied in the form of schedules is being taken care of as follows:

A breakdown of utility plant by accounts is reflected in Schedules A and A-1.

For a breakdown of cash item in Engineers pro forma consolidated balance sheet showing the amount of Government securities owned by Engineers prior to the Plan, reference is made to Pro Forma Adjustment No. 4A shown on Page 4 of Schedule A and Pro Forma Adjustment No. 3A on Page 3 of Schedule C, reflecting the conversion of the total amount of Government securities held by Engineers into cash.

Engineers miscellaneous investments consist of excess profits tax refund bonds. This fact has been noted on Schedules C and C-1.

ENGINEERS PUBLIC SERVICE COMPANY (INCORPORATED) AND SUBSIDIARY COMPANIES PRO FORMA BALANCE SHEET CONSOLIDATED AS AT JUNE 30, 1945 GIVING ESTIMATED EFFECT TO (A) SALE OF INVESTMENT IN THE WESTERN PUBLIC SERVICE COMPANY AND MISCELLANEOUS ADJUSTMENTS, AND (B) THE CONSUMMATION OF PARTS I AND II OF THE PLAN

ENGINEERS PUBLIC SERVICE COMPANY (INCORPORATED) AND SUBSIDIARY COMPANIES

Pro Forma Adjustments to Balance Sheet Consolidated as at June 30, 1945 Giving Estimated Effect to (A) Sale of Investment in The Western Public Service Company and Miscellaneous Adjustments and (B) The Consummation of Parts I and II of The Plan.

(1)

Dr.	Taxes accrued	$ 3,004,512	
Dr.	Other current liabilities	18,459	
Cr.	Post-war refund of Federal excess profits tax		$ 219,755
Cr.	Earned surplus, minority interest		6,067
Cr.	Earned surplus since 5/31/38, Parent Company's proportion		2,797,149

Restore to earned surplus a portion of overaccrual for 1944 Federal income taxes of Virginia and Citizens Rapid Transit Corporation.

(2)

Dr.	Utility plant	$ 2,570,000	
Dr.	Cash	1,318,545	
Dr.	Subsidiary companies notes payable	1,135,000	
Dr.	Other reserves	194,590	
Cr.	Taxes accrued		1,736,390
Cr.	Reserve for Depreciation		1,633,600
Cr.	Earned surplus, minority interest		720
Cr.	Earned surplus since 5/31/38, Parent Co.'s proportion		1,847,425

Estimated cash transactions of Engineers and Virginia from July 1 to December 31, 1945, inclusive.

(2A)

Dr.	Utility plant, gas, at original cost	$ 5,420,473	
Dr.	Plant acquisition adjustments	93,374	
Dr.	Investments in subsidiary companies (excess)	$ 93,172	
Dr.	Earned surplus, minority interest	202	
Cr.	Utility plant, other, at cost		5,513,847
Cr.	Amortization of plant acquisition adjustments		93,374

To state Norfolk, Va., gas plant at original cost and to provide for disposition of excess of book cost of such plant over original cost in accordance with Report on original cost filed in September 1945 with State regulatory body having jurisdiction, subject to such changes, if any, as may be necessary upon examination by such regulatroy body of the company's records.

Engineers' Exhibit No. 9 (Cont'd)

(3)

Dr.	Cash	$ 1,592,000	
Dr.	Parent Company's reserve for depreciation in value of investments in subsidiaries	1,160,535	
Cr.	Investments in subsidiary companies (excess)		621,200
Cr.	Special funds		92,000
Cr.	Common stock, minority interest		612,000
Cr.	Subsidiary companies notes payable		508,800
Cr.	Capital surplus		918,535

Sale by Engineers of investment in securities of The Western Public Service Company for $1,500,000 cash and release of special funds originally deposited at the time of sale of securities of The Western Public Service Company (Maryland), and transfer to capital surplus unused portion of reserve for depreciation in value of investments applicable to securities of The Western Public Service Company.

Schedule A
Page 4

(4)

Dr.	Cash	$21,964,632	
Cr.	Investments in subsidiary companies (excess)		$ 8,813,222
Cr.	Common stock, minority interests		11,101,125
Cr.	Earned surplus since 5/31/38 Parent Co.'s proportion		2,050,285

Sale by Engineers of investment in common stock of Gulf States to common stockholders under rights. 1,909,968 shares @ $11.50 = $21,964,632.

(4A)

Dr.	Cash	$ 4,650,000	
Cr.	United States treasury securities, at cost		4,650,000

Conversion of United States treasury securities held by Engineers into cash.

(5)

Dr.	Cash	$ 3,000,000	
Cr.	Note payable, long-term debt		1,500,000
Cr.	Note payable, due within one year		1,500,000

Borrowing by Engineers of $3,000,000 on a note payable to bank, bearing interest at the rate of 1½% per annum, payable $750,000 semi-annually.

Engineers' Exhibit No. 9 (Cont'd)

(6)

Dr.	Preferred stock	$39,245,500	
Cr.	Cash		39,245,500

Liquidation of Engineers preferred stock at $100 per share.

(7)

Dr.	Capital surplus	$ 6,645,389	
Cr.	Investments in subsidiary companies (excess)		2,796,697
Cr.	Common stock, minority interests		3,848,692

Distribution by Engineers as a partial dividend in liquidaton from the captal of the Company the common stock of El Paso Electric Company pro rata to common stockholders.

(8)

Dr.	Parent Company's reserve for depreciation in value of investments in subsidiaries	$ 2,000,000	
Cr.	Capital surplus		2,000,000

Transfer to capital surplus of unused portion of Engineers reserve for depreciation in value of investments applicable to securities of El Paso Electric Co.

(9)

Dr.	Cash	$ 39,980	
Cr.	Investment in associated company		39,980

Sale by Virginia of its investment in Epsco, Inc. for book value.

(10)

Dr.	Earned surplus 5/31/38, Parent Co.'s proportion	$ 3,425,038	
Cr.	Capital surplus		3,425,038

Transfer to capital surplus of Engineer's proportion of consolidated earned surplus at May 31, 1938.

Engineers' Exhibit No. 9 (Cont'd)

Schedule H

ENGINEERS PUBLIC SERVICE COMPANY (INCORPORATED) AND SUBSIDIARY COMPANIES

Explanation of Pro Forma Adjustment No. 10 to Balance Sheet Consolidated as at June 30, 1945

Engineers Public Service Company (Incorporated) went through an accounting reorganization as at May 31, 1938 which had the effect of reducing the earned surplus of Engineers to zero and as a result the earned surplus of its subsidiaries at that date became "frozen" and unavailable to Engineers as earnings since dividends from subsidiary companies declared subsequent to May 31, 1938 may be credited to Engineers earned surplus only to the extent that such dividends were earned subsequent to that date. These accounting adjustments were in accord with suggestions received from the Director of the Public Utilities Division of the Securities and Exchange Commission in letter dated May 25, 1938.

Pro forma adjustment No. 10 to the Engineers and Subsidiaries consolidated balance sheet represents an adjustment made in consolidating the balance sheets of Engineers and its subsidiary companies whereby Engineers' interest in the earned surplus of subsidiary companies at May 31, 1938 is combined or transferred to capital surplus. This is a consolidating entry only and no such adjustment is recorded on the books of Engineers or its subsidiary companies. The amount of $3,425,038 included in such transfer in the aforesaid balance sheet is made up of the following:

Portion of Virginia Electric and Power Company earned surplus at May 31, 1938 applicable to the parent company after excluding minority interests therein	$4,116,066
Amount included above representing acquired surplus to Engineers	691,028
Earned surplus of Virginia Electric and Power Company at May 31, 1938 earned subsequent to date of acquisition and prior to May 31, 1938 but unavailable to Engineers as earnings since dividends from subsidiary companies declared subsequent to May 31, 1938 may be credited to Engineers earned surplus only to the extent that such dividends were earned subsequent to that date	$3,425,038

Engineers' Exhibit No. 9 (Cont'd)

Schedule I

ENGINEERS PUBLIC SERVICE COMPANY (INCORPORATED)
AND SUBSIDIARY COMPANIES

Detail of Earnings From Other Sources in the Amount of $84,341 Shown in the "Other" Column in the Combined Income Statement

	Total Received by Engineers Corporate	Portion Assigned to Consolidated Surplus	Earnings From Other Sources
Savannah Electric and Power Co. Preferred dividends	$ 11,000	-0-	$11,000
" " " Common dividend	458,555	415,315	43,240
Missouri Service Co. Bond interest	64,475	34,499	29,976
The Northern Kansas Power Co. Open Acct. interest	125	-0-	125
	$534,155	449,814	$84,341

Note

Engineers Public Service Company sold its interests in Savannah Electric and Power Company in April 1945 and sold its interests in Missouri Service Company and The Northern Kansas Power Company in June 1945. Consequently, the consolidated income statement does not include the operations of such companies subsequent to December 31, 1944 and the amount of income received by Engineers Public Service Company from such companies subsequent to December 31, 1944 is included in consolidated earnings from other sources only to the extent of the net income of such companies accruing to Engineers Public Service Company between December 31, 1944 and the date of sale.

Engineers' Exhibit No. 15-A.

Opinion of Mudge, Stern, Williams & Tucker
Dated August 31, 1945.

MUDGE, STERN, WILLIAMS & TUCKER
(Rushmore, Bisbee & Stern)
20 Pine Street
New York 5, N. Y.

August 31, 1945.

Dear Mr. Barnes:

In accordance with your request, we have considered from the standpoint of Federal Income Taxes with respect both to the stockholders of Engineers Public Service Company (Incorporated) ("Engineers") and the Corporation itself, the program for the divestment by Engineers of its assets and its ultimate dissolution and liquidation or merger into Virginia Electric and Power Company ("Virginia").

Engineers' Exhibit No. 15-A (Cont'd)

The essential steps in the program which have a tax significance may be summarized as follows:

1. The 280,000 shares of Common Stock of Gulf States Utilities Company ("Gulf States"), all of which are held by Engineers, are to be reclassified into 1,909,968 shares.

2. The shares of Preferred Stock of Gulf States, none of which are held by Engineers, are to be granted 7 votes per share.

3. The 150,000 shares of Common Stock of El Paso Electric Company ("El Paso"), all of which are owned by Engineers, are to be reclassified into 381,994 shares.

4. Engineers will issue, pro rata, 1,909,968 warrants to its Common Stockholders, each of which warrants will represent the right to purchase from Engineers 1 share of Gulf States Common Stock at $11.50 per share, and to the extent that warrants are not exercised Engineers will sell the shares of Gulf States Stock represented thereby. Such warrants will be issued and distributed without the surrender by the Common Stockholders of Engineers of their Common Stock.

5. Engineers will deposit $39,245,500 plus accrued dividends to date of deposit for payment to the holders of the 392,455 shares of its Preferred Stock. Such distribution will be in cancellation of the whole of the outstanding Preferred Stock of Engineers, and thereafter the only right remaining to the record holder of each certificate of Preferred Stock will be the right to receive any amount in addition to $100 per share, plus such accrued dividends, if any is determined to be payable. Engineers will file a certificate or certificates reflecting the elimination of the capital represented by its Preferred Stock and the elimination of all of its authorized Preferred Stock.

6. Engineers will distribute as a dividend in partial liquidation the Common Stock of El Paso on the basis of

Engineers' Exhibit No. 15-A (Cont'd)

1/5 of a share of El Paso Common for each share of Engineers Common, scrip to be issued and delivered in lieu of fractions of shares. Such distribution, issue and delivery will be without the surrender by the Common Stockholders of Engineers of their Common Stock.

7. After all its liabilities have been liquidated or otherwise provided for, Engineers will either (a) be legally dissolved and liquidated and will distribute its Common Stock in Virginia and other remaining assets pro rata to its Common Stockholders, or (b) be merged into Virginia, with the Engineers Common Stockholders receiving their pro rata interest in the merged company.

The tax consequences of the above described transactions, except the reclassification of the Gulf States and El Paso Stocks, are largely governed by the provisions of Sections 371, 372 and 373 constituting Supplement R of the Internal Revenue Code. Supplement R was enacted by the Revenue Act of 1938 and, to broaden its scope was amended by the Revenue Act of 1942. These provisions create new exceptions to the general rule that the entire amount of gain or loss from the disposition of property shall be recognized. As stated in the Finance Committee Report on the Revenue Bill of 1938:

> "These new exceptions should be strictly construed as in the case of the exceptions in existing law. Unless the requirements of section 371 are clearly met, gain or loss will be recognized upon the exchange or distribution.
>
> * * * * * * *
>
> "It is contemplated that the application of the provisions of this supplement will result only in postponing the recognition of gain or loss until a disposition of property is made which is not covered by such provisions. * * * Although the time of recognition may be shifted, there must be a true reflection

Engineers' Exhibit No. 15-A (Cont'd)

> of income in all cases, and it is intended that the provisions of this supplement shall not be construed or applied in such a way that this purpose will be defeated. * * * Furthermore, the general principles of law with respect to tax avoidance and evasion, including the doctrine enunciated by the Supreme Court in *Gregory* v. *Helvering* (1935) 293 U. S. 465, will be applicable to any transaction arising in the form of a simplification or integration of a holding-company system, notwithstanding any order pertaining to the transaction which may be entered by the Securities and Exchange Commission."

The above mentioned principles are also reflected in The Treasury Department Regulations under Supplement R. In accordance with the Statute (Sec. 371(f)), such Regulations (Reg. 111, Sec. 29.371-8) also provide with respect to the term "order of the Securities and Exchange Commission", that the provisions of Sec. 371, which postpone the recognition of taxable gain, shall not apply to any exchange, expenditure, investment, distribution or sale unless each of the following requirements is met:

> "(a) The order of the Securities and Exchange Commission must recite that the exchange, expenditure, investment, distribution, or sale is necessary or appropriate to effectuate the provisions of section 11(b) of the Public Utility Holding Company Act of 1935.
>
> (b) The order shall specify and itemize the stocks and securities and other property (including money) which are ordered to be acquired, transferred, received or sold upon such exchange, acquisition, expenditure, distribution, or sale, and, in the case of an investment, the investment to be made, so as clearly to identify such property.

Engineers' Exhibit No. 15-A (Cont'd)

(c) The exchange, acquisition, expenditure, investment, distribution, or sale shall be made in obedience to such order and shall be completed within the time prescribed in such order."

The Regulations further state that these

"requirements were not designed merely to simplify the administration of the provisions of section 371, and they are not to be considered as pertaining only to administrative matters. Each one of the three requirements is of the essence, and must be met if gain or loss is not to be recognized upon the transaction."

From the foregoing you will appreciate the absolute necessity of the most strict compliance with provisions of Supplement R, particularly in view of the circumstance that in the last analysis gain from the contemplated transactions is as to Engineers not merely postponed but avoided.

Supplement R speaks in terms of exchanges, distributions, etc. "in obedience to an order of the Securities and Exchange Commission" and not, like Code Sec. 112, in terms of a "plan". We think it can successfully be argued that such transactions which comply with any such order, meet the provisions of Supplement R whether they constitute a "plan" or a part of a "plan". Nevertheless, viewing the matter solely from a tax standpoint, it may become advisable later to amend the program so as to set up at least two plans, one of which would include the distribution of the Gulf States warrants, the sale of the Gulf States Stock and the distribution of the El Paso Stock, and the other of which would include the distribution of the Virginia Stock. As set forth below, such transactions in respect of Gulf States and El Paso fall within the provisions of Sec. 371(c) which requires that the distribution be "without the surrender by such shareholder of stock or

securities in such corporation * * *" (Engineers), while the distribution of the Virginia Stock in liquidation of Engineers would fall within the provisions of Sec. 371(a) which contemplate an exchange, that is, the exchange of the Virginia stock upon the surrender of the Engineers Common Stock. Moreover, the transactions relating to Gulf States and El Paso are presumbly to be completed in the near future while it is evident that the liquidation or merger of Engineers may require a considerably longer period.

We note that the steps in relation to the reclassification of the Gulf States and El Paso Stock are not part of the Plan pursuant to Sec. 11(e) and will be taken pursuant to orders of the Securities and Exchange Commission other than orders in compliance with Sec. 11(b). We approve of this procedure. Otherwise a technical argument could be advanced that the reclassification of each of such stocks was an exchange within a system group (that is, an exchange of the presently existing number of shares for the number of reclassified shares), followed by a sale of the property received in exchange (the reclassified shares), and as Sec. 371(d) exempts a subsequent sale of property so received only in case the property is Preferred Stock, it could be argued that the sale by Engineers of the Gulf States Common Stock and the sale by Engineers of the El Paso Common Stock (if market conditions should make the latter step necessary), would not be exempt. The representative of the Internal Revenue Bureau, with whom informally we discussed this point, did not regard it as particularly troublesome, but nevertheless suggested that it could be avoided by effecting the reclassification pursuant to an order or orders of the Securities and Exchange Commission other than an order in compliance with Sec. 11(b). This practice we understand has recently been followed in other cases.

In addition to the facts stated above, we premise our opinion upon the following:

Engineers' Exhibit No. 15-A (Cont'd)

1. Engineers is a registered holding company under Sec. 2 of the Public Utility Holding Company Act.

2. Each of the transactions referred to in the Plan will be made pursuant to an order of the Securities and Exchange Commission which by Statute (Sec. 373(a)) is defined as

> "an order issued after May 28, 1938, by the Securities and Exchange Commission which requires, authorizes, permits, or approves transactions described in such order to effectuate the provisions of section 11(b) of the Public Utility Holding Company Act of 1935, 49 Stat. 820 (U. S. C., title 15, sec. 79k (b)), which has become or becomes final in accordance with law."

3. None of the shares of Gulf States, El Paso or Virginia to be distributed or sold by Engineers under the Plan is nonexempt property which by Statute (Sec. 373(e)) means:

> "(1) Any consideration in the form of evidences of indebtedness owned by the transferor or a cancellation or assumption of debts or other liabilities of the transferor (including a continuance of encumbrances subject to which the property was transferred);
>
> "(2) Short-term obligations (including notes, drafts, bills of exchange, and bankers' acceptances) having a maturity at the time of issuance of not exceeding twenty-four months, exclusive of days of grace;
>
> (3) Securities issued or guaranteed as to principal or interest by a government or subdivision thereof (including those issued by a corporation which is an instrumentality of a government or subdivision thereof);

Engineers' Exhibit No. 15-A (Cont'd)

(4) Stock or securities which were acquired from a registered holding company or an associate company of a registered holding company which acquired such stock or securities after February 28, 1938, unless such stock or securities (other than obligations described as nonexempt property in paragraph (1), (2), or (3)) were acquired in obedience to an order of the Securities and Exchange Commission or were acquired with the authorization or approval of the Securities and Exchange Commission under any section of the Public Utility Holding Company Act of 1935, 49 Stat. 820 (U. S. C., title 15, sec. 79k (b));

(5) Money, and the right to receive money not evidenced by a security other than an obligation described as nonexempt property in paragraph (2) or (3).

4. Engineers has a net capital loss carry-over from 1944 in excess of $31,000,000.

5. As of December 31, 1944, Engineers had a deficit in accumulated earnings and profits computed on a tax basis in excess of $20,000,000.

Following is our opinion with respect to the tax consequence of each of the steps enumerated above.

1. The reclassification of the Common Stock of Gulf States will not be a transaction within the scope of Supplement R. It will, however, be a tax-free exchange under Code Sec. 112(b)(2), which provides:

"No gain or loss shall be recognized if common stock in a corporation is exchanged solely for common stock in the same corporation, or if preferred stock in a corporation is exchanged solely for preferred stock in the same corporation."

2. The grant of additional voting rights to the Preferred Stock of Gulf States does not constitute an exchange,

Engineers' Exhibit No. 15-A (Cont'd)

but, even if it did, it would be a nontaxable exchange under the last-quoted section.

3. The reclassification of the Common Stock of El Paso will result in neither gain nor loss to Engineers under the last-quoted section.

4. No gain to the Engineers Common Stockholders will be recognized upon the issuance and distribution to them of warrants to purchase Gulf States Stock. Sec. 371(c) provides:

> "DISTRIBUTION OF STOCK OR SECURITIES ONLY.—If there is distributed, in obedience to an order of the Securities and Exchange Commission, to a shareholder in a corporation which is a registered holding company or a majority-owned subsidiary company, stock or securities (other than stock or securities which are nonexempt property), without the surrender by such shareholder of stock or securities in such corporation, no gain to the distributee from the receipt of the stock or securities so distributed shall be recognized."

The distribution of warrants will be in obedience to an order of the Securities and Exchange Commission as defined above; it will be made to shareholders of Engineers which is a registered holding company, and it will consist of "stock or securities", which term, by Sec. 373(f), is defined as

> "shares of stock in any corporation, certificates of stock or interest in any corporation, notes, bonds, debentures, and evidences of indebtedness (*including any evidence of an interest in or right to subscribe to or purchase any of the foregoing*)." (Italics supplied)

Such warrants will not be nonexempt property as defined above. Such distribution will be made without the sur-

Engineers' Exhibit No. 15-A (Cont'd)

render by the Engineers Common Stockholders of their stock. Thus there will be a compliance with all of the requirements of Sec. 371(c).

Although it has been held by the Circuit Court for the Second Circuit, in *Choate* v. *Commissioner*, 129 Fed. 2d, 684, that the issuance of rights by a corporation to its own stockholders to subscribe to its Preferred Stock, resulted in a taxable dividend when the rights were exercised, to the extent that the option price was less than the fair market value of the optioned stock, we do not think that the principle of the case is applicable in this instance, in view of the express provisions of Secs. 371(c) and 373(f). We are accordingly of the opinion that no taxable gain will be realized by the Engineers Common Stockholders upon exercise of their warrants.

As authorized by the Statute, the Commissioner has prescribed regulations for the determination of the tax basis of securities acquired by shareholders upon tax-free distributions under Sec. 371(c). Under the Regulations (Reg. 111, Sec. 29.372-4), the cost or other basis of Engineers Common Stock must be apportioned between such Stock and the above mentioned warrants so distributed, as nearly as may be to the respective values of such Stock and warrants at the time of the distribution. Such requirement of apportionment would be a further answer to an argument that dividend income is realized on the exercise of the warrants, since in that event the same income would be taxed twice, once as a dividend and again on the sale of the stock, the tax basis of which was reduced on receipt of the warrants.

If the stockholder exercises his warrants, the basis to him of the Gulf States Stock will be the subscription price plus the basis so apportioned to the warrants.

For the purpose of determining capital gains and losses on the sale of warrants, the period during which was held the Engineers Stock in respect of which the warrants were issued, is to be added to the period during which the war-

rants were held. The basis of this opinion is Code Sec. 117(h)(3) which provides that in

> "determining the period for which the taxpayer has held stock or securities received upon a distribution where no gain was recognized to the distributee under the provisions of * * * section 371(c) of * * * this chapter, there shall be included the period for which he held the stock or securities in the distributing corporation prior to the receipt of the stock or securities upon distribution."

However, irrespective of the period during which the Engineers Stock or such warrants were held, any loss resulting from the failure to exercise warrants will be a short-term loss in view of Code Sec. 117(g), which provides that

> "gains or losses attributable to the failure to exercise privileges or options to buy or sell property shall be considered as short-term capital gains or losses."

For the purpose of determining capital gains and losses on the sale of Gulf States Stock acquired through the exercise of warrants, the holding period will begin with, and include, the day upon which the warrants to acquire such stock or securities were exercised. This opinion is based upon Reg. 111, Sec. 29.117-4, which provides:

> "The period for which the taxpayer has held stock or securities issued to him by a corporation pursuant to the exercise by him of rights to acquire such stock or securities from the corporation will, in every case and whether or not the receipt of taxable gain was recognized in connection with the distribution of the rights, begin with and include the day upon which the rights to acquire such stock or securities were exercised."

We now come to the tax effect upon Engineers of the issuance of warrants to purchase the Gulf States Common Stock, and of the sale of such Stock. Engineers will realize

Engineers' Exhibit No. 15-A (Cont'd)

no gain on the issuance of the Gulf States warrants. Although the Commissioner of Internal Revenue has in a number of cases urged that a corporation may realize gain on the distribution of assets to its stockholders measured by the difference between the basis of such assets to the Corporation and the value thereof at the time of distribution, the Courts have quite unanimously rejected the Commissioner's theory. Moreover, in no reported case has the Commissioner ever taken such a position in the case of issuance of warrants.

The sale by Engineers of the Gulf States Stock will not result in the recognition to Engineers of any gain. This is a transaction under Sec. 371(b), which we quote in full:

> "EXCHANGES AND SALES OF PROPERTY BY CORPORATIONS.—No gain shall be recognized to a transferor corporation which is a registered holding company or an associate company of a registered holding company, if such corporation, in obedience to an order of the Securities and Exchange Commission transfers property in exchange for property and such order recites that such exchange by the transferor corporation is necessary or appropriate to the integration or simplification of the holding company system of which the transferor corporation is a member. If any such property so received is nonexempt property, gain shall be recognized unless such nonexempt property or an amount equal to the fair market value of such property at the time of the transfer is, within 24 months of the transfer, under regulations prescribed by the Commissioner with the approval of the Secretary, and in accordance with an order of the Securities and Exchange Commission, expended for property other than nonexempt property or is invested as a contribution to the capital, or as paid-in surplus, of another corporation, and such order recites that such expenditure or investment by the transferor corporation is necessary or appropriate

Engineers' Exhibit No. 15-A (Cont'd)

to the integration or simplification of the holding company system of which the transferor corporation is a member. If the fair market value of such nonexempt property at the time of the transfer exceeds the amount expended and the amount invested, as required in the second sentence of this paragraph, the gain, if any, to the extent of such excess, shall be recognized. Any gain, to the extent that it cannot be applied in reduction of basis under section 372(a)(2) shall be recognized. For the purposes of this subsection, a distribution in cancellation or redemption (except a distribution having the effect of a dividend) of the whole or a part of the transferor's own stock (not acquired on the transfer) and a payment in complete or partial retirement or cancellation of securities representing indebtedness of the transferor or a complete or partial retirement or cancellation of such securities which is a part of the consideration for the transfer, shall be considered an expenditure for property other than nonexempt property, and if, on the transfer, a liability of the transferor is assumed, or property of the transferor is transferred subject to a liability, the amount of such liability shall be considered to be an expenditure by the transferor for property other than nonexempt property. This subsection shall not apply unless the transferor corporation consents, at such time and in such manner as the Commissioner, with the approval of the Secretary, may by regulations prescribe, to the regulations prescribed under section 372 (a)(2) in effect at the time of filing its return for the taxable year in which the transfer occurs."

The Regulations (Reg. 111, Sec. 29.371-3) recognize a sale as an exchange and recognize money as property. Sec. 29.371-3(b) of such Regulations provides:

Engineers' Exhibit No. 15-A (Cont'd)

"No gain is recognized to a transferor corporation upon the sale or other disposition of property transferred by such transferor corporation in exchange solely for property other than nonexempt property, as defined in section 373(e), but only if all of the following requirements are satisfied:

(1) the transferor corporation is, under the definition in section 373(b), a registered holding company or an associate company of a registered holding company;

(2) such transfer is in obedience to an order of the Securities and Exchange Commission (as defined in section 373(a)) and such order satisfies the requirements of section 371(f);

(3) the transferor corporation has filed the required consent to the regulations under section 372(a)(2) * * *; and

(4) the entire amount of the gain, as determined under section 111, can be applied in reduction of basis under section 372(a)(2)."

Engineers is a registered holding company under requirement (1). The sale of Gulf States Stock will be in obedience to an order of the Securities and Exchange Commission as defined above, which complies with the specifications of Sec. 371(f), summarized above, and thus the sale will meet requirement (2). Engineers will presumably file the consent to the regulations under Sec. 372(a)(2), and thus meet requirement (3). A form of consent (Form 982A) is enclosed herewith. The entire amount of the gain can be applied by Engineers in reduction of the basis (which, it is understood, is very substantially in excess of the amount of such gain) of other assets under Sec. 372 (a)(2), and thus comply with requirement (4). However, the transfer of the Gulf States Stock will not be "solely for property other than nonexempt property". The exchange

Engineers' Exhibit No. 15-A (Cont'd)

will be for cash which is nonexempt property and thus falls short of the provisions of Sec. 29.371-3(b). Therefore, recourse must be made to Sec. 29.371-3(c), which provides in part:

> "If the transaction would be within the provisions of subsection (b) of this section if it were not for the fact that the property received in exchange consists in whole or in part of nonexempt property (as defined in section 373(e)), then no gain is recognized if such nonexempt property, or an amount equal to the fair market value of such nonexempt property at the time of the transfer,
>
> (1) is expended within the required 24-month period for property other than nonexempt property; or
>
> (2) is invested within the required 24-month period as a contribution to the capital, or as paid-in surplus, of another corporation; but only if the expenditure or investment is made
>
> (3) in accordance with an order of the Securities and Exchange Commission (as defined in section 373(a)) which satisfies the requirements of section 371(f) and which recites that such expenditure or investment by the transferor corporation is necessary or appropriate to the integration or simplification of the holding-company system of which the transferor corporation is a member; and
>
> (4) the required consent, waiver and bond have been executed and filed. See subsections (f) and (g) of this section."

In accordance with the Statute (Sec. 371(b)), the Regulations also provide (Sec. 29.371-3(c)) that an expenditure for property other than nonexempt property includes "a distribution in cancellation or redemption (except a distribution having the effect of a dividend) of the whole or a part of the transferor's own stock (not acquired on the

Engineers' Exhibit No. 15-A (Cont'd)

transfer) * * *". Under the program the entire amount received from the exercise of warrants plus cash from other sources, is to be deposited and used to pay to Preferred Stockholders $100. per share of such Stock plus accrued dividends to the date of deposit. The amount so paid will be a distribution in cancellation of the whole of the outstanding Preferred Stock of Engineers, and after such deposit the only remaining right to the registered holder of such certificates will be the right to receive such additional amount, if any, as may be determined to be payable. If such distribution is made within the required 24-month period, it is our opinion that Engineers will have satisfied requirement (1) last-quoted above. Alternative requirement (2) is not applicable. The expenditure will be in accordance with an order of the Securities and Exchange Commission as defined above, and which will satisfy the requirements of Sec. 371(f) summarized above, and recite that such expenditure by Engineers is necessary or appropriate to the integration or simplification of the holding-company system of which Engineers is a member. Thus requirement (3) last-quoted above will be met. The consent referred to in requirement (4) is one which must be filed with Engineers' return for the taxable year in which the transaction occurs, and in that consent Engineers must agree to have the basis of its property adjusted in accordance with the regulations in effect at the time the return is filed. If the full amount of the expenditure required for the application of Sec. 29.371-3(c) of the Regulations has not been made by the close of the year in which the sale of the Gulf States stock occurs, Engineers will be required to file with its return for such year an application for the benefit of the 24-month period for expenditure, reciting the nature and time of the proposed expenditure. When requested by the Commissioner, Engineers must execute and file a waiver of the Statute of Limitations with respect to the assessment of deficiencies (for the taxable year of the Gulf States sale and for all succeeding taxable years in any of which falls any part of the period beginning with

the day of the transfer and ending 24 months thereafter) as the Commissioner may specify, and such bond with such surety as the Commissioner may require, in an amount not in excess of double the estimated maximum taxes which would be payable if Engineers did not make the required expenditure within the 24-month period. Upon the filing by Engineers of such consent, waiver and bond, requirement (4) last-above quoted will have been met. Thus, the sale of the Gulf States Stock will be exempt under Code Sec. 371(b) and Sec. 29.371-3(c) of the Regulations. The same rule as to the non-recognition of gains applies both as to the Gulf States Stock sold pursuant to the exercise of warrants and the Gulf States Stock sold following the failure to exercise warrants.

5. The $100. per share of Preferred Stock to be distributed to each Preferred Stockholder, should for the tax purposes of such stockholders be treated as a payment in exchange for stock, and any resulting gain should be treated as a capital gain if the stock constituted a capital asset in the hands of such stockholder. Our authority for this opinion is Code Sec. 115(c) and 29.115-9 of the Regulations. The latter provides in part:

> "A bona fide distribution in complete cancellation or redemption of all ~~of the stock~~ of a corporation, or one of a series of bona fide distributions in complete cancellation or redemption of all of the stock of a corporation, is not essentially equivalent to the distribution of a taxable dividend."

Moreover, while it may be contended that the foregoing regulation would have no application in the event that Engineers was not dissolved and liquidated, further support for the opinion expressed above may be had in a decision of the Circuit Court for the 7th Circuit in *Shellabarger Grain Products Co. v. Commissioner,* 146 Fed. 2d, 177, in view of the very substantial deficit in accumulated earnings and profits of Engineers. We are also inclined to

the view that the accrued dividend will be similarly treated, although there is less assurance on this point. The Preferred Stockholders will not be entitled to any deduction for loss on the surrender of their stock until the question as to whether they are entitled to any amount over and above the $100. plus accrued dividends is decided, and they are paid such amount if found entitled thereto. Such loss will be a capital loss if the stock constituted a capital asset in the hands of the stockholder.

6. The distribution of the El Paso Stock to shareholders will be a non-taxable distribution under Sec. 371(c), quoted above. The distribution will be pursuant to an order of the Securities and Exchange Commission as defined above; it will be made to shareholders of Engineers, which is a registered holding company; it will consist of stock which is not nonexempt property as defined above; and it will be made without the surrender by the Engineers Common Stockholders of their stock. Thus, all the requirements of Sec. 371(c) appear to be met.

The distribution of scrip in lieu of fractions would likewise be non-taxable under Sec. 371(c) since the term "stock or securities" as defined in Sec. 371(f) includes "any evidence of an interest in" stock.

The basis to the Engineers Common Stockholders of this Common Stock is to be apportioned between such Stock and the El Paso Stock in accordance with the respective market values of each at the time of the distribution, just as in the case of the distribution of the Gulf States warrants mentioned above.

For the purpose of determining capital gains and losses on the sale by a shareholder of Engineers of El Paso Stock so distributed to him, the period during which his Engineers Stock was held is to be added to the period during which the El Paso Stock was held by him. This is in accordance with Sec. 117(h) (3), to which reference has been made above. Engineers will neither realize taxable gain nor sustain deductible loss on the distribution of the El Paso Common Stock, since the rule is clear that a corporation

Engineers' Exhibit No. 15-A (Cont'd)

realizes no taxable gain and sustains no deductible loss on the distribution of its assets in liquidation of stock. In explanation of amendments to Supplement R, the foregoing rule was stated in the Finance Committee Report of the Revenue Act of 1942, as follows:

> "A corporation realizes no gain or loss in the mere distribution of its assets in kind in partial or complete liquidation."

7. The liquidation of Engineers, through the distribution of the Virginia Stock to stockholders, would be a non-taxable exchange on which stockholders would not realize gain or sustain loss. Such liquidation is covered by Sec. 371(a), which provides as follows:

> "No gain or loss shall be recognized to the transferor if stock or securities in a corporation which is a registered holding company or a majority-owned subsidiary company are transferred to such corporation or to an associate company thereof which is a registered holding company or a majority-owned subsidiary company solely in exchange for stock or securities (other than stock or securities which are non-exempt property), and the exchange is made by the transferee corporation in obedience to an order of the Securities and Exchange Commission."

The "transferor" will be the Engineers Common Stockholder. His Common Stock qualifies as stock in a corporation which is a registered holding company. It will be transferred solely in exchange for stock which is other than nonexempt property, that is, it will be exchanged for Virginia Stock, which is not nonexempt property. The exchange will be made by Engineers in obedience to an order of the Securities and Exchange Commission as defined above. Thus the transaction will be within the ambit of Sec. 371(a).

If upon dissolution and liquidation Engineers distributes not only Virginia Stock but also cash or other assets,

Engineers' Exhibit No. 15-A (Cont'd).

the transaction will not fall within Sec. 371(a), but will fall within Sec. 371(c), in which event gain will be recognized to stockholders measured by the difference between the tax basis of their Engineers Stock and the value of the Virginia Stock so distributed, plus the cash or the value of other assets distributed in liquidation, *but not in excess of the cash or the value of such assets other than the Virginia Stock.* It is also our opinion that under the *Shellabarger* case mentioned above, and for the reasons stated above, no part of such distribution should be treated as having the effect of a distribution of a taxable dividend.

The basis of the Engineers Stockholders of their Virginia Stock will be the same as the basis of their Engineers Stock decreased in the amount of any money received, and increased in the amount of gain or decreased in the amount of loss recognized upon the exchange.

For the purpose of determining gains and losses on the sale of the Virginia Stock, the period during which an Engineers Common Stockholder held the Engineers Common Stock is to be added to the period in which such stockholder held his Virginia Stock. This opinion is based upon Code Sec. 117(h) (1), which provides that in determining the period for which the taxpayer has held property received on an exchange, there shall be included the period for which he held the property exchanged if under the provisions of Code Sec. 113 the property has the same basis in whole or in part in his hands as the property exchanged. Code Sec. 113(a)(17) provides that if the property was acquired in any manner described in Sec. 372, other than subsection (a)(2), the basis shall be that prescribed in such section.

As to Engineers, it is our opinion that it will realize no taxable gain on the distribution of the Virginia Stock or other assets for the reason that a corporation realizes no gain on a distribution in kind in liquidation of its stock. Moreover, even if capital gain were realized the unused net capital loss carried over from 1944 would be applicable if the transaction occured within the required 5-year period.

Engineers' Exhibit No. 15-A (Cont'd)

There are no specific provisions in Supplement R or in the regulations thereunder in relation to mergers, but the Internal Revenue officials with whom informally we discussed the matter, expressed the thought, which appears to us to be reasonable, that a merger would be treated no differently from a liquidation. On this basis it is our view that in the event of a merger of Engineers and Virginia (an associate company which is a majority-owned subsidiary, 99.8% of the voting stock of which is held by Engineers), if all of Engineers' debts were previously satisfied, the tax effect upon Engineers and its stockholders would be the same for the purpose of determining gain or loss as a liquidation, and that if Virginia assumed any debts of Engineers, such assumption would be treated as the equivalent of cash under Sec. 371(e) and Engineers would realize gain on the transaction measured by the difference between the cost to it of the Virginia Stock and its value at the time of the merger, plus the amount of debts assumed, *but not in excess of the amount of such debts.*

In order to obtain the benefit of Supplement R, it will be necessary both for Engineers and its stockholders in their tax returns to supply certain details of information in relation to the transactions, all of which are set forth in Reg. 111, Sec. 29.371-10.

You will, of course, appreciate that the foregoing opinion is based upon existing law and regulations, and that it is virtually certain that there will be new tax legislation effective in 1946 and subsequent years, when the contemplated transactions will occur. We think it well also to add that there are no decided Court cases under Supplement R; that there are practically no published rulings of the Internal Revenue Bureau under this Supplement, and that the officials of the Internal Revenue Bureau are quite reluctant even informally to discuss the Supplement and the Regulations thereunder in the absence of a specific order of the Securities and Exchange Commission.

Engineers' Exhibit No. 15-A (Cont'd)

We note that one of the conditions to effectuation of the Plan is the obtaining from the Treasury Department of a closing agreement or ruling as to the tax consequences of the transactions. We expect to be able to obtain a ruling as to the effect of the transactions upon Engineers and its stockholders and a closing agreement as to the effect of the transactions upon Engineers. It will not be possible to obtain a closing agreement as to the effect of the transactions upon the stockholders of Engineers. A closing agreement with respect to any taxable period ending subsequent to the date of the agreement is subject to change in or modification of the law enacted subsequent to the date of the agreement and applicable to such taxable period.

As soon as the Plan has been submitted to the Securities and Exchange Commission, and after the preparation of the order but before the entry thereof, it is advisable that application be made to the Internal Revenue Bureau for such ruling and closing agreement.

In view of all of the foregoing, we think that you may properly make the following statement to the Engineers Stockholders:

> "In the opinion of Counsel, the Plan if carried out as contemplated, will not result in any taxable gain to Engineers Common Stockholders in respect of the distribution of warrants to purchase Gulf States Common Stock, the exercise of such warrants, the distribution of the El Paso Common Stock or the distribution of the Virginia Stock."

Yours very truly,

MUDGE, STERN, WILLIAMS & TUCKER

(SEAL)

Engineers' Exhibit No. 15-A (Cont'd)

INSTRUCTIONS

(1) This form is to be used by a corporation excluding from gross income under section 371 (b) of the Internal Revenue Code, any amounts of income attributable to the transfer of property described therein.

(2) This form should be executed in duplicate and filed with the return.

(3) The consent shall be signed with the corporate name, followed by the signature and title of at least two officers of the corporation empowered to sign for the corporation, in addition to which the corporate seal must be affixed. If the corporation has no seal, the consent must be accompanied by a certified copy of the resolution passed by the board of directors, giving such officers authority to sign the consent.

(4) If the taxpayer desires to have the basis of its property adjusted in any manner different from the general rule set forth in the regulations, in effect at the time of filing the return, prescribed under section 372 (a) (2) of the Internal Revenue Code, the precise method (including allocation of amounts) should be set forth in detail on separate sheets attached to this form. Consent by the Commissioner of Internal Revenue to any departure from such general rule shall be effected only by a closing agreement entered into under the provisions of section 3760 of the Internal Revenue Code.

(5) The consent filed on this form shall be deemed to be a consent to the application of the general rule stated above and such general rule shall prevail in the determination of the basis of the taxpayer's property, unless the taxpayer specifically states on this form or on a separate sheet attached hereto and made a part hereof that it does not consent to the application of the general rule.

(6) There shall be attached to this form a complete statement and description of the transactions resulting in the nonrecognition of gain under section 371 (b).

Engineers' Exhibit No. 15-B.

Opinion of Mudge, Stern, Williams & Tucker
Dated September 26, 1945.

Cable Address

September 26, 1945.

JBL: FI

Dear Mr. Barnes:

In our letter of August 31, we set forth our detailed opinion as to the tax results of the liquidation program, part of which later took the form of the Plan of September 10, 1945, pursuant to Section 11(e) of the Public Utility Holding Company Act. Subsequently there was submitted to us Amendment No. 1 to the application dated September 10, accompanying the above mentioned Plan, with the request that we render a legal opinion as to the tax results thereof.

We understand that the Amendment contemplates the surrender by Engineers Preferred Stockholders to Engineers of (a) Gulf States warrants plus (b) Engineers Preferred Stock (at the stated valuation) in exchange for Gulf States Common Stock. The Amendment speaks in terms of the "purchase from Engineers * * * at the subscription price of $11.50 per share" and the surrender of the Preferred Stock "in payment of the above subscription price", thus indicating, in form at least a purchase and sale rather than an exchange. If the transaction were a sale, the tax results to Engineers Preferred Stockholders would be the same as on any sale for cash. However, for the purpose of this opinion we assume that it will ultimately be made unmistakably clear in the Plan, and by action thereunder, that the transaction in form, as well as in substance, is an exchange and not a sale. On this basis, and subject to the

qualifications mentioned in our original letter, we are of the opinion:

(1) That no taxable gain or deductible loss will result to Engineers from the exchange of Gulf States Common Stock for Gulf States warrants and Engineers Preferred Stock;

(2) That under Section 371(a) of the Internal Revenue Code no taxable gain or deductible loss will result to Engineers Preferred Stockholders who make the exchange;

(3) That under Section 372(a) of the Internal Revenue Code the tax basis to any Engineers Preferred Stockholder of the Gulf States Common Stock so received in exchange will be the basis to him of the Gulf States warrants surrendered, plus the basis of the Engineers Preferred Stock surrendered.

On the foregoing basis we think that in communicating with Engineers Preferred Stockholders in this matter you may properly incorporate in your statement the following:

"In the opinion of Counsel, no taxable gain will be realized by Engineers Preferred Stockholders upon the surrender of Gulf States warrants and Engineers Preferred Stock in exchange for Gulf States Common Stock."

Yours very truly,

MUDGE, STERN, WILLIAMS & TUCKER

Engineers' Exhibit No. 31.

Letter to Stockholders of Engineers Dated September 10, 1945.

ENGINEERS PUBLIC SERVICE COMPANY
(Incorporated)
90 Broad Street,
New York 4, N. Y.

September 10, 1945

To the Stockholders:

Pursuant to authorization of the Board of Directors (one Director dissenting) of Engineers Public Service Company (Incorporated) ("Engineers"), a Plan under Section 11(e) of the Public Utility Holding Company Act of 1935 (the "Act") for the divestment by Engineers of assets and related matters was filed with the Securities and Exchange Commission (the "Commission"), on September 10, 1945. You will be notified as soon as the Commission fixes a date for the hearing on the Plan.

We advised you in the 1944 Annual Report of the latest developments in connection with the proceedings before the Commission relating to compliance with Section 11(b)(1) of the Act. Since the date of mailing such Annual Report, the Supreme Court of the United States set October 8, 1945 as the date for oral argument on the pending appeals of Engineers and the Commission in connection with the orders of the Commission issued in 1942, directing Engineers to divest itself of its interest in its principal subsidiaries, except Virginia Electric and Power Company ("Virginia"). Due to the resignation of Justice Roberts, this date has been postponed but it seems likely that an early date will be set for the hearing promptly upon the appointment of his successor and that, therefore, an early determination of the validity of the 1942 divestment orders of the Commission will be had.

In the last Annual Report as well as in previous Annual Reports, the management has advised the Stockholders that if the outcome of the present litigation involving Section

Engineers' Exhibit No. 31 (Cont'd)

11(b)(1) made it necessary or desirable to do so, it was hoped that it would be possible to develop a plan which would meet with the approval of the Commission under which Engineers' interest in Virginia, Gulf States Utilities Company ("Gulf States") and El Paso Electric Company ("El Paso") would be distributed to its security holders through liquidating holding companies, the Preferred Stock of which would be distributed to the Preferred Stockholders of Engineers and the Common Stock of which would be distributed to the Common Stockholders of Engineers, the net income of such liquidating holding companies to be used exclusively for payment of preferred dividends and retirement of their preferred stock. Further consideration and discussion with personnel of the staff and the Commission of that liquidating holding company plan led to the conclusion by the Directors that such a plan would not be likely to receive the approval of the Commission under the conditions existing in the Engineers system. In lieu thereof the Board of Directors has concluded that it was in the best interests of the stockholders to file a plan which would give to the Common Stockholders of Engineers, within a relatively brief period, the direct ownership of the Common Stocks of Virginia, Gulf States and El Paso. In order to expedite the divestment of Gulf States and El Paso the plan was divided into three parts and Engineers requested the Commission to issue a separate order for each of the three parts of the Plan. A copy of the Plan is enclosed herewith and a brief description of the Plan follows:

Part I.—This part of the Plan is conditioned, among other things, upon the prior reclassification by Gulf States of its Common Stock into 1,909,968 shares, the number of shares of Engineers Common Stock outstanding, and the granting to Gulf States Preferred Stock of seven votes per share instead of the one vote per share it now carries in order to maintain approximately the same relative voting

Engineers' Exhibit No. 31 (Cont'd)

power between the two classes of stock as existed prior to such reclassification.

This Part I of the Plan provides that the holder of each share of Engineers Common Stock may acquire one share of the reclassified Common Stock of Gulf States at $11.50 per share through the exercise of subscription warrants, the proceeds of which, together with the estimated cash in the treasury of Engineers at the time Part I becomes effective and cash to be raised by a short term bank loan, will provide sufficient funds to pay $100 per share to the Preferred Stockholders of Engineers, as follows:

Cash from exercise of subscription warrants	$21,964,632
Cash from bank loan	3,000,000
Cash from Treasury—estimated 12/31/45	14,280,868
Total amount required to pay $100 per share to Preferred Stockholders (accrued dividends to the deposit date will also be paid)	$39,245,500

Upon the deposit in trust for the benefit of the Preferred Stockholders of an amount equal to $100 per share plus accrued dividends to the deposit date on the Preferred Stock, all rights of the Preferred Stockholders will cease except the right to receive such amount, if any, in excess of $100 per share plus accrued dividends to the deposit date as may finally be determined to be payable. With reference to this matter, see Part II of the Plan outlined below.

After Part I of the Plan shall have become effective, there will be distributed to the Engineers Common Stockholders, as a dividend in partial liquidation, in respect of each share of Engineers Common Stock held by them, 1/5th of a share of El Paso Common Stock which, prior to the consummation of this Part I of the Plan, shall have been reclassified into 381,994 shares. The Engineers Common Stockholders who acquire Gulf States Common Stock and

Engineers' Exhibit No. 31 (Cont'd)

El Paso Common Stock will then be entitled to receive directly current dividends on such Common Stocks in amounts declared by the respective Boards of Directors. Gulf States is presently paying common dividends at an annual rate approximating 80¢ per new share and El Paso at an annual rate approximating $1 per new share, so that, based on present rates, annual dividends on the Common Stocks of these two companies which are to be distributed immediately under the Plan, are, in total, equivalent to approximately $1 per share of Engineers Common Stock. Virginia is presently paying dividends at an annual rate of $1 per share on its present stock equivalent to approximately $1.50 per share of Engineers Common Stock, but Engineers will use this income for retirement of the proposed bank loan and corporate expense until the bank loan and any other liabilities have been paid in full or provided for.

Part II—This part of the Plan requests an order of the Commission that it is fair and equitable that no amount in addition to $100 per share and accrued dividends be paid the Preferred Stockholders but provides, in the event the Commission finds that some additional amount shall be payable, for the automatic amendment of this Part so as to provide for such additional payment, preserving to Engineers, however, the right to apply for a review of any order providing for or requiring any additional payment. Pending the final determination of this question, Engineers will retain its interest in the Common Stock of Virginia. If upon the final determination of this question an amount in excess of $100 per share plus accrued dividends is payable then such amount will be paid by Engineers to the Preferred Stockholders.

Part III—When all of Engineers' liabilities have been finally determined, the Plan will be amended to supply the details of the steps for the dissolution and liquidation of Engineers or the merger of Engineers with Virginia, which

Engineers' Exhibit No. 31 (Cont'd)

will then be its sole remaining subsidiary. At that time the Engineers Common Stockholders would obtain a direct interest in the Common Stock of Virginia either through distribution or merger and would receive directly current dividends on the Common Stock in amounts declared by the Board of Directors of Virginia.

The Plan was filed without waiver and with full reservation of all constitutional and legal rights of Engineers and its subsidiaries to attack the validity and legality of any section, order, rule or regulation under the Act, including without limitation, the right to proceed with argument of their case involving Section 11 of the Act pending in the Supreme Court of the United States at any time hereafter when a quorum of such court may be available to participate in the decision of such case. It is not expected that any portion of this Plan shall be consummated until after such decision.

In the opinion of Counsel, the Plan if carried out as contemplated, will not result in any taxable gain to Engineers Common Stockholders in respect of the distribution of warrants to purchase Gulf States Common Stock, the exercise of such warrants, the distribution of the El Paso Common Stock or the distribution of the Virginia Stock.

It is expected that Part I of the Plan will not become effective prior to December 31, 1945, but you will be kept advised of any important developments. In the meantime, if you have any questions or suggestions regarding the Plan, do not hesitate to write the undersigned.

Yours very truly,

D. C. Barnes,
President.

Engineers' Exhibit No. 32.

Letter to Stockholders of October 30, 1945.

ENGINEERS PUBLIC SERVICE COMPANY
(Incorporated)
90 Broad Street
New York 4, N. Y.

October 30, 1945.

To the Stockholders:

The Securities and Exchange Commission has fixed November 20, 1945, at 10:00 A.M. as the date and time for beginning hearings on the Plan of Engineers Public Service Company (Incorporated), pursuant to Section 11(e) of the Public Utility Holding Company Act of 1935, for Divestment of Assets and Related Matters, such hearings to be held at the Commission's offices at 18th and Locust Streets, Philadelphia, Pennsylvania. This hearing was originally called for November 13, 1945, but was postponed because the Supreme Court of the United States fixed that date as the date on which argument is to begin on the Company's pending case involving the Commission's divestment orders under Section 11 of the Act. Copies of the Notice and Order for Hearing and the amendment thereto issued by the Commission will be furnished on request to the undersigned.

Since the filing of the Plan on September 10, 1945, an amendment was filed for the purpose of making three changes in the warrants to be issued to the Common Stockholders of Engineers evidencing the right to acquire, at the rate of $11.50 per share, one share of Gulf States Utilities Company Common Stock for each share of Engineers Common Stock held.

The first change provided that in addition to acquiring the Gulf States Common Stock for cash, holders of warrants could exchange Engineers Preferred Stock at the rate of $100 per share plus accrued dividends to the expiration date of the warrants for Gulf States Common Stock,

Engineers' Exhibit No. 32 (Cont'd)

retaining the right to receive, with respect to the shares of Preferred Stock so exchanged, any amount in excess of $100 per share plus accrued dividends, if and when any excess amount is finally determined to be payable to the Preferred Stockholders: Thus an Engineers Common Stockholder who also owns Engineers Preferred Stock may exchange his Preferred Stock for the Gulf States Common Stock, to the extent his warrants permit, or an Engineers Preferred Stockholder may buy the requisite "Rights" in the market and acquire Gulf States Common Stock in exchange for his Engineers Preferred Stock.

In the opinion of Counsel, no taxable gain will be realized by Engineers Preferred Stockholders upon the surrender of Gulf States warrants and Engineers Preferred Stock in exchange for Gulf States Common Stock.

The second change was to eliminate from the Plan the condition that at least 90% (or such lower percentage as shall be acceptable to Engineers) of the shares of Gulf States Common Stock shall have been purchased under the warrants, and to provide that Part I of the Plan shall be deemed to be effective upon the mailing of the warrants.

The third change was to shorten the warrant period from three weeks to ten days.

If the Plan is approved by the Commission and the Court, we will advise you later of the procedure to be followed in carrying it out.

Yours very truly,

D. C. Barnes,
President.

Engineers' Exhibit No. 33.

CERTIFICATE OF INCORPORATION†
of
ENGINEERS PUBLIC SERVICE COMPANY
(Reflecting all changes to May 6, 1942.)

FIRST: The name of this Corporation is

ENGINEERS PUBLIC SERVICE COMPANY.

SECOND: Its principal office in the State of Delaware is located at No. 7 West Tenth Street, in the City of Wilmington, County of New Castle. The name and address of its resident agent is Andrew C. Gray, No. 7 West Tenth Street, Wilmington, Delaware.*

THIRD: The nature of the business or objects or purposes proposed to be transacted, promoted or carried on by this Corporation are as follows:

1. To subscribe for, or cause to be subscribed for, buy, own, hold, purchase, receive, or acquire, and to sell, negotiate, guarantee, assign, deal in, exchange, transfer, mortgage, pledge or otherwise dispose of, shares of the capital stock, scrip, bonds, coupons, mortgages, debentures, debenture stock, securities, notes, acceptances, drafts and evidences of indebtedness issued or created by other corporations, joint stock companies or associations, whether

† Original certificate of incorporation duly filed and recorded June 23, 1925.

* Pursuant to resolutions duly adopted by the Board of Directors January 30, 1930 and certificate duly filed February 3, 1930 and duly recorded February 4, 1930, E. Ennalls Berl became resident agent of the Corporation. By certificate duly filed on July 21, 1930 and duly recorded on July 22, 1930, the principal office in the State of Delaware and address of the resident agent was changed to 900 Market Street, in the City of Wilmington, County of New Castle, Delaware.

Pursuant to resolutions adopted by the Board of Directors July 26, 1945 and certificate filed and recorded on July 27, 1945, Prentice-Hall, Inc. became resident agent and principal office was changed to No. 317-325 South State Street, City of Dover, County of Kent, Delaware.

Engineers' Exhibit No. 33 (Cont'd)

public, private or municipal, or any corporate body, and while the owner thereof, to possess and to exercise in respect thereof all the rights, powers and privileges of ownership, including the right to vote thereon; to guarantee the payment of dividends on any shares of the capital stock of any of the corporations, joint stock companies or associations in which this Corporation has or may at any time have an interest, and to become surety in respect of, endorse or otherwise guarantee the payment of the principal of or interest on any scrip, bonds, coupons, mortgages, debentures, debenture stock, securities, notes, drafts, bills of exchange or evidences of indebtedness, issued or created by any such corporations, joint stock companies or associations; to become surety for or guarantee the carrying out and performance of any and all contracts, leases and obligations of every kind of any corporations, joint stock companies or associations, and in particular of any corporation, joint stock company or association any of whose shares, scrip, bonds, coupons, mortgages, debentures, debenture stock, securities, notes, drafts, bills of exchange or evidences of indebtedness, are at any time held by or for this Corporation, and to do any acts or things designed to protect, preserve, improve, or enhance the value of any such shares, scrip, bonds, coupons, mortgages, debentures, debenture stock, securities, notes, drafts, bills of exchange or evidences of indebtedness.

2. To generate, produce, buy, or in any manner acquire, and to sell, dispose of and distribute electricity for light, heat, power and other purposes and to carry on the business of furnishing, supplying and vending light, heat, power and water and any and all businesses incident thereto, and to build, construct, develop, improve, acquire, hold, own, lease,

Engineers' Exhibit No. 33 (Cont'd)

maintain and operate plants, facilities and works for the manufacture, generation, production, accumulation, transmission and distribution of electric energy, gas and steam, for light, heat, power and other purposes, and to acquire, construct, maintain and operate systems of water works for the supply of water. To purchase, acquire and lease, and to sell, lease and dispose of water, water rights, water records, power privileges and appropriations for power, light, heat, mining, milling, irrigation, agricultural, domestic or any other use or purpose. To build, construct, develop, improve, acquire, hold, own, lease, maintain and operate, by electricity, gasoline or other power, street railways and interurban railways, omnibusses, automobiles, trackless trolleys, motors, airships, aeroplanes and systems thereof and other transportation facilities for the transportation of passengers, mail, express, merchandise or other freight in any part of the world, except that this Corporation shall not have power to construct, maintain or operate railroads or railways within the State of Delaware. To produce, mine, buy, sell, store, market, deal in and prospect for coal and minerals of all kinds and the products and by-products thereof. To carry on in all its branches the business of manufacturing, preparing, cutting, storing, buying, selling and otherwise dealing in and with, all kinds of ice, and to erect, establish, operate, manufacture, construct, sell and deal in all kinds of ice and refrigerating plants, machines, apparatus and refrigerating processes. To prospect for, produce, mine, buy, sell, store, market and otherwise deal in and with, iron ore, and to construct, complete, lease, buy and otherwise acquire, own, maintain, operate, sell, lease, and otherwise dispose of, iron foundries and steel mills and to produce, and manufacture any and all things of which iron or steel

Engineers' Exhibit No. 33 (Cont'd)

form a part. To construct, purchase, lease or otherwise acquire, to own, hold, manage, control, maintain and operate, and to sell, lease and otherwise dispose of, radio and other broadcasting and receiving apparatus. To build, construct, enlarge, develop, improve, extend and repair light, heat, power, transmission and hydraulic plants, electrical works, machinery and appliances, telegraph and telephone lines, dams, reservoirs, canals for navigation, power, irrigation and other purposes, bridges, piers, docks, mines, shafts, tunnels, wells, water works, foundries, mills, street railways, interurban railways, railways and buildings.

3. To obtain the grant of, purchase, lease, or otherwise acquire any concessions, rights, options, privileges, lands, rights of way, sites, properties, undertakings or businesses, or any right, option or contract in relation thereto, and to perform, carry out and fulfill the terms and conditions thereof, and to carry the same into effect, and to develop, maintain, lease, sell, transfer, dispose of and otherwise deal with the same. To apply for, purchase or acquire by assignment, transfer or otherwise, and to exercise, carry out and enjoy any license, power, authority, franchise, ordinance, order, right or privilege, which any government or authority, supreme, municipal or local, or any corporation or other public body shall enact, make or grant. To secure, purchase, acquire, apply for, register, own, hold, sell or dispose of any and all copyrights, trade-marks and other trade rights. To purchase, apply for, obtain or otherwise acquire any and all letters patent, licenses, patent rights, patented processes and similar rights granted by the United States or any other government or country, or any interest therein, or any inventions which may seem capable of being

Engineers' Exhibit No. 33 (Cont'd)

used for or in connection with any of the objects or purposes of this Corporation, and to use, exercise, develop, sell, dispose of, lease, grant licenses in respect to, or other interests in the same, and otherwise turn the same to account, and to carry on any business, manufacturing or otherwise, which may be deemed to directly or indirectly aid, effectuate or develop the objects or any of them of this Corporation.

4. To acquire by purchase, lease, own, hold, sell, mortgage and encumber both improved and unimproved real estate wherever situate; to survey, subdivide, plat, colonize, and improve the same for purposes of sale or otherwise; and to construct and erect thereon factories, works, plants, stores, mills, hotels, houses and buildings.

5. To manufacture, buy, sell and generally deal in, goods, wares, merchandise, property and commodities of any and every class and description, and all articles used or useful in connection therewith, insofar as may be permitted by the laws of the State of Delaware. To engage in any business, whether manufacturing or otherwise which this Corporation may deem advantageous or useful in connection with any or all of the foregoing, and to purchase, acquire, manufacture, market or prepare for market, sell and otherwise dispose of any article, commodity or thing which this Corporation may use in connection with its business.

6. To borrow money for any of the purposes of this Corporation, and to issue bonds, debentures, debenture stock, notes and other obligations therefor, and to secure the same by pledge or mortgage of the whole or any part of the property of this Corporation, either real or personal, or to issue bonds,

Engineers' Exhibit No. 33 (Cont'd)

debentures, debenture stock, notes or other obligations without any such security. To draw, make, accept, endorse, discount, guarantee, execute and issue promissory notes, bills of exchange, drafts, warrants, and all kinds of obligations and certificates and negotiable or transferable instruments.

7. To enter into, make, perform and carry out contracts of every kind for any lawful purpose, without limit as to amount, with any person, firm, association or corporation.

8. To have one or more offices, to carry on any or all of its operations and business, and, without restriction or limit as to amount, to purchase, lease, or otherwise acquire, hold and own, and to mortgage, sell, convey, lease or otherwise dispose of, real and personal property of every class and description, in any of the states or territories of the United States and in the District of Columbia, and in any and all foreign countries, subject to the laws of such state, district, territory or country.

9. To do any and all things herein set forth, and in addition such other acts and things as are necessary or convenient to the attainment of the purposes of this Corporation, or any of them, to the same extent as natural persons lawfully might or could do in any part of the world, insofar as such acts are permitted to be done by a corporation organized under the General Corporation Laws of the State of Delaware.

The foregoing clauses shall be construed, both as objects and powers, and it is hereby expressly provided that the foregoing enumeration of specific powers shall not be held to limit or restrict in any manner the powers of this Corporation, and are in furtherance of, and in addition to,

and not in limitation of the general powers conferred by the laws of the State of Delaware.

It is the intention that the purposes, objects and powers specified in this Article Third and all subdivisions thereof shall, except as otherwise expressly provided, in nowise be limited or restricted by reference to or inference from the terms of any other clause or paragraph of this Article Third, and that each of the purposes, objects and powers specified in this Article Third shall be regarded as independent purposes, objects and powers.

*Notwithstanding anything to the contrary in this Certificate of Incorporation contained, this Corporation shall not have the power or be authorized to underwrite or participate in the marketing of securities of a public utility within the meaning of Section 305(b) of the Federal Power Act.

**FOURTH: The total number of authorized shares of capital stock of this Corporation is two million three hundred forty thousand nine hundred sixty-eight (2,340,968), divided into two classes, namely, preferred stock and common stock.

The total number of shares of such preferred stock authorized is four hundred thirty-one thousand (431,000) shares without nominal or par value. The total number of shares of such common stock authorized is one million nine hundred nine thousand nine hundred sixty-eight (1,909,968) shares of the par value of $1 per share.

The description of said classes of stock, and the designations, preferences and restrictions, if any, and voting powers, or restrictions or qualifications thereof, of such preferred stock and common stock (together with certain related provisions for the regulation of the business and for the conduct of the affairs of this Corporation, its direc-

---

* Reflects amendment effective April 22, 1939.

** Reflects amendments effective May 24, 1926, April 12, 1928, July 3, 1928, October 25, 1928, May 28, 1929, January 7, 1933, May 25, 1936 and April 22, 1939.

tors and stockholders), are as hereinafter in this Article Fourth set forth:

DIVISION A.—THE PREFERRED STOCK.

I. *Series and limits of variations between series.* The preferred stock may be issued from time to time in series, as may from time to time be determined by resolution of the Board of Directors of this Corporation, with variations as between each series in any one or more of the following particulars:

(a) the designation of such series, which may be by distinguishing number, letter or title as the Board of Directors may deem appropriate;

(b) the rate (to be expressed in terms of dollars, and not exceeding $7 per share per annum) at which dividends are to accrue thereon, hereinafter referred to as the "fixed dividend rate";

(c) the amount (expressed in terms of dollars, not exceeding $10 per share) payable in respect of the shares of such series as a premium in case of the redemption thereof or upon a voluntary liquidation, dissolution or winding up of this Corporation, or reduction of its capital stock, resulting in any distribution of its assets to its stockholders, which amount in respect of any series may, but need not, vary according to the time or circumstances of such action, the amount or amounts so fixed being hereinafter referred to as the "fixed redemption premium"; and

(d) the existence or non-existence of the right to exchange or convert the shares of such series into shares of any other series of the preferred stock or into shares of any other class of stock of this Corporation, and the rate or basis, time, manner and conditions of exchange or conversion.

Engineers' Exhibit No. 33 (Cont'd)

If and whenever from time to time the Board of Directors shall determine to issue preferred stock of any series, it shall, prior to the issuance of any shares of each such series, by resolution or resolutions fix the terms of such series in the particulars above mentioned and shall cause the same to be set forth in such additional certificate or certificates, if any, as shall at the time be required by law.

II. *Dividends.* Out of the assets of this Corporation available for dividends, the holders of the preferred stock of each series shall be entitled to receive, as and when declared payable by the Board of Directors, dividends at but not exceeding the fixed dividend rate for such series, payable quarterly on the first day of the months of January, April, July and October in each year, before any dividends shall be paid upon or set apart for the common stock; and such dividends on the preferred stock shall be cumulative, so that if in any dividend period or periods full dividends upon the outstanding preferred stock at the fixed dividend rate or rates therefor shall not have been paid, the deficiency (without interest) shall be paid or declared and set apart for payment before any dividends shall be paid upon or set apart for the common stock. Dividends on all shares of the preferred stock of each series shall commence to accrue and be cumulative from the quarterly dividend date on or next preceding which the first shares of such series shall have been issued; but in the event of the issue of additional shares of preferred stock of any series subsequently to the date of the first issue of shares of such series, all dividends paid on the preferred stock of such series prior to the issue of such additional shares, and all dividends declared payable to holders of record of preferred stock of such series of a date prior to such issue, shall be

Engineers' Exhibit No. 33 (Cont'd)

deemed to have been paid in respect of the additional shares so issued. Any dividends paid upon the preferred stock in an amount less than full cumulative dividends accrued or in arrears upon all preferred stock outstanding shall, if more than one series be outstanding, be divided between the different series in proportion to the aggregate amounts which would be distributable to the preferred stock of each series if full cumulative dividends were declared and paid thereon.

III. *Preference on Liquidation, etc.* In the event of any liquidation, dissolution or winding up of this Corporation, or any reduction of its capital stock, resulting in any distribution of its assets to its stockholders, the holders of the preferred stock of each series shall be entitled to receive, for each share thereof, an amount equal to $100, together with all dividends accrued or in arrears thereon, plus, in case such liquidation, dissolution or winding up or reduction shall have been voluntary, the fixed redemption premium for such series, if any, before any distribution of the assets shall be made to the holders of the common stock; but the holders of the preferred stock shall be entitled to no further participation in such distribution. If upon any such liquidation, dissolution or winding up or reduction, the assets distributable among the holders of the preferred stock shall be insufficient to permit the payment of the full preferential amounts aforesaid, then the entire assets of this Corporation to be distributed shall be distributed among the holders of the preferred stock then outstanding, ratably in proportion to the full preferential amounts to which they are respectively entitled. As used in this Article Fourth the expression "dividends accrued or in arrears" means, in respect of each share of the preferred stock of any series, an amount equal to simple interest upon the sum of $100 at an

annual rate equal to the fixed dividend rate for such series, from the date from which cumulative dividends thereon commence to accrue to the date as of which the computation is to be made, less the aggregate amount (without interest thereon) of all dividends theretofore paid (or deemed to have been paid) or declared and set aside for payment in respect thereof. Nothing in this Paragraph III shall be deemed to prevent the purchase or redemption of preferred stock in any manner permitted by Paragraph IV of Division A of this Article Fourth or to prevent the purchase by this Corporation of shares of its own common stock. A consolidation or merger of this Corporation with any other corporation or corporations shall not be regarded as a liquidation, dissolution or winding up of this Corporation within the meaning of this Paragraph III, provided such consolidation or merger does not substantially impair the rights and preferences of the preferred stock. The rights of the holders of the preferred stock under this Paragraph III are, however, subject to the provisions of Paragraph IV of Division C of this Article Fourth.

IV. *Redemption and Repurchase.* The Corporation may, at its option, at any time or from time to time, redeem the whole or any part of the preferred stock or of any series thereof, at a price for each share thereof equal to $100, plus the fixed redemption premium therefor, if any, together with the amount of any dividends accrued or in arrears thereon. Notice of any proposed redemption of preferred stock shall be given by this Corporation by mailing a copy of such notice, at least thirty (30) days prior to the date fixed for such redemption, to the holders of record of the preferred stock to be redeemed, at their respective addresses appearing on the books of this Corporation, and also, if so provided in the certificates for the preferred stock to be redeemed or in the by-laws of this

Engineers' Exhibit No. 33 (Cont'd)

Corporation, by publication in such manner as shall have been so provided. Any such redemption of preferred stock shall be in such amount, at such place and by such method, whether by lot or *pro rata*, as shall from time to time be provided by the by-laws of this Corporation, or be determined by resolution of its Board of Directors. On and after the date fixed in any such notice as the date of redemption, unless default shall be made by this Corporation in providing funds at the time and place specified for the payment of the redemption price pursuant to said notice, all dividends on the preferred stock thereby called for redemption shall cease to accrue; and from and after the date so fixed, unless default be made as aforesaid, or the date of the earlier deposit by this Corporation in trust, with a solvent bank or trust company doing business in the Borough of Manhattan, City and State of New York, of funds sufficient for such redemption, all rights of the holders of the shares of preferred stock so called for redemption as stockholders of this Corporation shall cease and determine, except (a) the right to receive the redemption price when due and (b) such right, if any, as may then exist to exchange or convert the shares called for redemption into other shares of this Corporation. This Corporation may also from time to time repurchase shares of its preferred stock at not exceeding the price or prices at which the same may be redeemed. This Corporation shall not, however, at any time redeem or repurchase less than the whole of its then outstanding preferred stock unless full cumulative dividends due to the date of such redemption or repurchase, upon all shares of the preferred stock then outstanding and not then to be redeemed or repurchased, shall have been paid or declared and set apart for payment. Shares of preferred stock redeemed or purchased by this Corporation may from time to time be reissued by it, and the shares so reissued may be either

Engineers' Exhibit No. 33 (Cont'd)

of the same or different series as the Board of Directors of this Corporation may determine.

V. *Voting Power.* The holders of the preferred stock shall not be entitled to vote, except in statutory proceedings as to which their vote is at the time required by law, and except that, in case at any time this Corporation shall fail to declare and pay or set aside for payment in full any quarterly dividend on any of the preferred stock and shall not on or before the eighth succeeding quarterly dividend payment date declare and pay or set aside for payment in full said dividend and also all subsequently accrued dividends on all of the outstanding preferred stock, then the holders of the preferred stock shall thereupon have and continue to have the right, voting as a class, by plurality vote, to elect such number of directors of this Corporation as will constitute one less than a majority of the members of the Board of Directors, until all accrued dividends on the preferred stock shall have been fully paid; and, during the continuance of such right of the preferred stockholders, the holders of the common stock shall have the right, voting together as one class, by plurality vote, to elect the remaining members of the Board of Directors. The term of office of all persons who may be directors of this Corporation at any time when such right shall accrue to the preferred stockholders shall terminate upon the election and qualification of their successors at a special meeting of the stockholders of this Corporation, which shall be held, at any time after the accrual of such right, upon the notice provided in the by-laws of this Corporation for the annual meeting of the stockholders, at the request in writing of the holders of record of at least five per cent. of the number of shares of the preferred stock then outstanding. In default of the calling of said meeting by a proper officer of this Corporation, within five days after the making of such request, such

Engineers' Exhibit No. 33 (Cont'd)

meeting may be called on like notice by any holder of record of preferred stock for which purpose any preferred stockholder shall have the right to have access to the stock books of this Corporation. If such special meeting be not called prior to the next annual meeting, the preferred stockholders as one class, and the holders of the common stock as a second class, shall respectively elect a minority and a majority of the members of the Board of Directors, at such annual meeting, unless previously thereto all such dividend defaults shall have been made good. Upon the termination at any time of such right of the preferred stockholders to elect a minority of the Board of Directors, the term of office of all directors elected by vote of the preferred stockholders (or to fill a vacancy which might have been so filled) shall end upon the election and qualification of their successors by the common stockholders, which election may be held on like notice at a special meeting of such stockholders, which shall be called at the request in writing of the holders of record of at least five per cent. of the number of shares of common stock then outstanding, or, if such special meeting is not called prior to the next annual meeting, at such annual meeting. Such special meeting may be called by the holders of record of at least five per cent. of the common stock of this Corporation if not called promptly by a proper officer of this Corporation upon such request, for which purpose they shall have access to the stock books of this Corporation. Whenever, by reason of the resignation, death or removal of any director or directors or any increase in the number of directors, at any time while the holders of the preferred stock are entitled to vote as aforesaid, the number of directors in office who have been elected by the holders of stock of either class shall become less than the total number subject to election by such class, the vacancy or vacancies so resulting may be filled by plurality vote of

such class of stockholders at a meeting thereof called for the purpose, or, pending such action, by the affirmative vote of the directors at the time in office who were elected by vote of such class of stockholders, although less than a quorum. During the continuance of such voting rights a director elected by the holders of the preferred stock (or to fill a vacancy which might have been so filled) shall be subject to removal either by a vote of a majority of the entire Board of Directors, including at least a majority of the directors elected by the holders of the preferred stock, or by vote of the holders of a majority of the shares of preferred stock at the time outstanding at a special meeting called for the purpose, but not otherwise. A special meeting to fill a vacancy or to remove a director as last above provided may be called at any time by the holder or holders of record of at least five per cent. of the outstanding shares of the class of stock entitled to vote thereat or in such other manner as may be provided for in the by-laws. The term of office of any officer of this Corporation shall terminate upon the election and qualification of his successor at any meeting of the Board of Directors following any special meeting of stockholders held upon the accrual or termination of the voting rights of the preferred stockholders, so that the new directors elected at any such meeting of stockholders shall be empowered to choose new officers of this Corporation or any thereof in their discretion.

DIVISION B.—THE COMMON STOCK.

I. *Dividends.* Out of any assets of this Corporations available for dividends remaining after full cumulative dividends on the preferred stock shall have been paid or declared and set aside for payment as required by Paragraph II of Division A of this Article Fourth, and after making such provision, if any, as the Board of Directors may deem necessary for working capital

and reserves, then, and not otherwise, dividends may be paid upon the common stock, to the exclusion of the preferred stock.

II. *Distribution of Assets.* In the event of any liquidation, dissolution or winding up of this Corporation, or any reduction of its capital stock, resulting in any distribution of its assets to its stockholders, after there shall have been paid to or set aside for the holders of the preferred stock the full preferential amounts to which they are respectively entitled under the provisions of Paragraph III of Division A of this Article Fourth, the holders of the common stock shall be entitled to receive, *pro rata,* all of the remaining assets of this Corporation available for distribution to its stockholders.

III. *Voting Power.* Subject to the voting rights expressly conferred upon the preferred stock by Paragraph V of Division A of this Article Fourth, the holders of the common stock shall possess full voting power for the election of directors and for all other purposes.

DIVISION C.—GENERAL PROVISIONS.

I. *Consideration receivable for no par value Stock.* Shares of capital stock of this Corporation without nominal or par value, of any class or classes hereby or hereafter authorized, may be issued by this Corporation from time to time for such consideration as may be fixed from time to time by the Board of Directors thereof. Said Board shall have authority, as provided by statute, to determine that only a part of the consideration which shall be received by this Corporation for any of the shares of its capital stock which it shall issue from time to time shall be capital; *provided, however,* that the entire consideration received by this Corporation for shares of its preferred stock (exclusive of an amount equal to dividends accrued thereon to the date of issue) shall be capital, unless such consideration

Engineers' Exhibit No. 33 (Cont'd)

is in excess of $100 per share, in which event such excess of consideration may be received as surplus.

II. *Waiver of preemptive rights, etc.* No holder of stock of this Corporation of any class shall have any preemptive or preferential right of subscription to any shares of any class of stock of this Corporation, whether now or hereafter authorized, or to any obligations convertible into stock of this Corporation, issued or sold, or any right of subscription to any thereof other than such, if any, as the Board of Directors in its discretion may from time to time determine, and at such price as the Board of Directors may from time to time fix pursuant to the authority conferred by this certificate: and any shares of stock or convertible obligations which the Board of Directors may determine to offer for subscription to the holders of stock may, as said Board shall determine, be offered to holders of any class or classes of stock exclusively or to the holders of all classes of stock, and, if offered to more than one class of stock, in such proportions as between said classes of stock, as the Board of Directors in its discretion may determine. As used in this Paragraph II the expression "convertible obligations" shall include any notes, bonds or other evidences of indebtedness to which are attached or with which are issued warrants or other rights to purchase or receive stock of this Corporation of any class or classes; and the Board of Directors is hereby expressly authorized, in its discretion, in connection with the issue of any obligations or stock of this Corporation (but without intending hereby to limit its general powers so to do in any other cases), to grant rights or options to purchase or receive stock of this Corporation of any class upon such terms and during such period as the Board of Directors shall determine, and to cause such rights or options to be evidenced by such warrants or other instruments as it may deem advisable.

Engineers' Exhibit No. 33 (Cont'd)

III. *Directors not disqualified from contracting, etc.* A director of this Corporation shall not in the absence of fraud be disqualified by his office from dealing or contracting with this Corporation either as a vendor, purchaser or otherwise, nor in the absence of fraud shall any transaction or contract of this Corporation be void or voidable or affected by reason of the fact that any director, or any firm of which any director is a member, or any corporation of which any director is an officer, director or stockholder, is in any way interested in such transaction or contract; provided that at the meeting of the Board of Directors or of a committee thereof having authority in the premises, authorizing or confirming said contract or transaction, the existence of an interest of such director, firm or corporation is disclosed or made known and there shall be present a quorum of the Board of Directors or of the directors constituting such committee, and such contract or transaction shall be approved by a majority of such quorum, which majority shall consist of directors not so interested or connected. Nor shall any director be liable to account to this Corporation for any profit realized by him from or through any such transaction or contract of this Corporation ratified or approved as aforesaid, by reason of the fact that he or any firm of which he is a member, or any corporation of which he is an officer, director or stockholder, was interested in such transaction or contract. Directors so interested may be counted when present at meetings of the Board of Directors or of such committee for the purpose of determining the existence of a quorum. Any contract, transaction or act of this Corporation or of the Board of Directors or of any committee thereof which shall be ratified by a majority in interest of a quorum of the stockholders having voting power at any annual meeting or any special meeting called for such purpose, shall be as valid and as binding as though ratified by every stockholder of this Corporation.

Engineers' Exhibit No. 33 (Cont'd)

*IV. *Indemnification of directors and officers.* The Company shall reimburse or indemnify each present and future director and officer of the Company (and his heirs, executors and administrators) for or against all expenses reasonably incurred by him or imposed on him, subsequent to the adoption of this amendment to the Certificate of Incorporation, in connection with, or arising out of any action, suit or proceeding in which he may be involved by reason of his being or having been a director or officer of the Company, where disposition of such action, suit, or proceeding is made in favor of such director or officer; provided that no reimbursement shall be made until such time has elapsed that appeal can no longer be taken and unless, in the judgment of the Board of Directors, such action, suit or proceeding will not be recommenced.

No present or future director or officer of the Company (or his heirs, executors and administrators) shall be liable for any act, omission, step or conduct taken or had in good faith, subsequent to the adoption of this amendment to the Certificate of Incorporation, which (whether by condition or otherwise) is required, authorized or approved by any order or orders issued pursuant to; the Public Utility Holding Company Act of 1935; the Federal Power Act; or any state statute regulating the Company or its subsidiaries by reason of their being public utility companies, public utility holding companies, public service companies or subsidiaries of public utility or public utility holding companies; or any amendments to any thereof. In any action, suit or proceeding based on any act, omission, step or conduct, as in this paragraph described, the provisions hereof shall be brought to the attention of the court. In the event that the foregoing provisions of this paragraph are found by the court not to constitute a valid defense on the grounds of not being applicable to the

* Reflects amendment effective May 6, 1942.

particular class of plaintiff, each such director and officer (and his heirs, executors and administrators) shall be reimbursed for, or indemnified against, all expenses and liabilities incurred by him or imposed on him, in connection with, or arising out of, any such action, suit or proceeding based on any act, omission, step or conduct taken or had in good faith as in this paragraph described. Such expenses and liabilities shall include, but shall not be limited to, judgments, court costs and attorneys' fees, but shall not include fines and penalties imposed pursuant to such statutes.

The foregoing rights shall not be exclusive of other rights to which any director or officer may otherwise be entitled and shall be available whether or not the director or officer continues to be a director or officer at the time of incurring such expenses and liabilities.

V. *Re-incorporation privilege, etc.* The Board of Directors of this Corporation is hereby authorized, upon the affirmative vote or written consent of the holders of a majority of the voting stock of this Corporation issued and outstanding, to sell and convey as an entirety and as a going concern all the property and assets of this Corporation to a new corporation organized under the laws of the State of Delaware or of any other state or jurisdiction for the purpose of acquiring the same, provided such new corporation shall have the same authorized amounts and classes of stock as this Corporation shall then have, with substantially the same series, preferences, voting powers and restrictions and qualifications thereof, and that the consideration for such sale and conveyance shall be the assumption by such new corporation of all liabilities and obligations of this Corporation then outstanding and the issuance and delivery by such new corporation to this Corporation or upon its order for distribution as hereinafter provided of such amounts and classes of stocks of such new corporation as will enable this Corporation

Engineers' Exhibit No. 33 (Cont'd)

to exchange, class for class, series for series and share for share, the outstanding stock of this Corporation for like stock of such new corporation; and in case any such exchange shall be authorized as aforesaid, each holder of stock of this Corporation, by becoming such a stockholder, consents and agrees to receive and accept in such case the stock of such new corporation in exchange on the basis aforesaid as a full and final distributive share of the proceeds in liquidation of such sale, and further agrees that in such case his stock in this Corporation of whatever class shall thereafter have no rights and privileges whatsoever except the right and privilege of being exchanged for stock of such new corporation of like class and series on the basis aforesaid. This provision, however, is not intended in any way to limit the general power of the Board of Directors of this Corporation to sell, lease or exchange any or all of its property and assets, upon such terms and conditions as said Board may deem expedient and for the best interests of this Corporation, provided that no sale, lease or exchange of all of its property and assets, including its good will and its corporate franchises, as an entirety, shall be made except when and as authorized by the affirmative vote of the holders of a majority of the stock of this Corporation issued and outstanding having voting power given at a stockholders' meeting duly called for that purpose, or when authorized by the written consent of the holders of a majority of the voting stock issued and outstanding.

VI(a). *Amendments.* This Corporation reserves the right to amend the provisions contained in this certificate in the manner now or hereafter prescribed by law, and all rights conferred upon stockholders hereunder are granted subject to such reservation.

*VI. The payment of dividends or the making of other distribntions to stockholders declared or made

Engineers' Exhibit No. 33 (Cont'd)

from earned surplus existing at the date of any reduction of capital or capital stock or from income or surplus earned after the date of such reduction shall not, for the purpose of Paragraph III of Division A of this Article Fourth and for the purpose of Paragraph II of Division B of this Article Fourth, be construed or deemed to be a distribution of assets resulting from such reduction.

FIFTH: The names and places of residence of each of the original subscribers to the capital stock of this Corporation are as follows:

Name	*Residence*	*Common Shares*
E. E. BERL	Wilmington, Delaware	4
K. M. DALÆY	Wilmington, Delaware	3
M. M. STIRLING	Wilmington, Delaware	3

SIXTH: The existence of this Corporation is to be perpetual.

SEVENTH: The private property of the stockholders of this Corporation shall not be subject to the payment of corporate debts to any extent whatever.

**EIGHTH: The following additional provisions are inserted for the regulation of the business and for the conduct of the affairs of this Corporation and its directors and stockholders:

(1) The by-laws of this Corporation may fix and alter the number of directors and may prescribe their term of office and from time to time the number of directors may be increased or decreased by amend-

* Reflects amendment effective May 25, 1936.

** Reflects amendment effective July 3, 1928; such amendment striking out the whole of the former Article Ninth.

Engineers' Exhibit No. 33 (Cont'd)

ment of the by-laws, provided that the number of directors shall always be an odd number not less than three. In case of any increase in the number of directors the additional directors shall be chosen by the directors or stockholders at the time having voting power as may be prescribed in the by-laws of this Corporation, subject to the provisions of Paragraph V. of Division A of Article Fourth hereof. Directors need not be stockholders.

(2) The Board of Directors shall have power to make, alter or repeal the by-laws of this Corporation except as otherwise expressly provided in a by-law adopted by the incorporators or stockholders entitled to vote; but by-laws so made or altered by the directors may be altered or repealed by such stockholders.

(3) The Board of Directors shall have authority from time to time to set apart out of any assets of this Corporation otherwise available for dividends a reserve or reserves as working capital or for any other proper purpose or purposes, and to abolish or add to any such reserve or reserves from time to time as said Board may deem to be in the interests of this Corporation; and said Board shall likewise have power to determine in its discretion what part of the assets of this Corporation available for dividends in excess of such reserve or reserves shall be declared in dividends and paid to the stockholders of this Corporation.

(4) The Board of Directors shall have power from time to time to determine to what extent and at what times and places and under what conditions and regulations the accounts and books of this Corporation, or any of them, shall be open to the inspection of the stockholders; and no stockholder shall have any right to inspect any account or book or

Engineers' Exhibit No. 33 (Cont'd)

document of this Corporation, except as conferred by the laws of the State of Delaware, unless and until authorized so to do by resolution of the Board of Directors or of the stockholders of this Corporation.

(5) At every meeting of the stockholders of this Corporation, shares of stock entitled to be voted thereat shall entitle the holders thereof to one vote for each share held by them.

We, the undersigned, being each of the original subscribers to the capital stock hereinbefore named for the purpose of forming a corporation to do business both within and without the State of Delaware and in pursuance of an act of the Legislature of the State of Delaware entitled "An Act Providing a General Corporation Law" (approved March 10, 1899), and the acts amendatory thereof and supplemental thereto, do make and file this certificate hereby declaring and certifying that the facts herein set forth are true and do respectively agree to take the number of shares of stock hereinbefore set forth and accordingly do hereunto set our hands and seals this 23rd day of June, A. D. 1925.

E. E. Berl (L. S.)
K. M. Daley (L. S.)
M. M. Stirling (L. S.)

In Presence of:

Herbert H. Ward, Jr.,
As to all.

STATE OF DELAWARE
COUNTY OF NEW CASTLE } ss.:

BE IT REMEMBERED that on this 23rd day of June, A. D. 1925, personally came before me, HERBERT H. WARD, JR., a Notary Public for the State of Delaware, E. E. BERL, K. M. DALEY and M. M. STIRLING all of the parties to the foregoing certificate of incorporation, known to me personally to be such, I having first made known to them and to each of them the contents of said certificate, and they did severally acknowledge that they signed, sealed and delivered said certificate as their several voluntary act and deed, and that the facts therein stated are truly set forth.

Given under my hand and seal of office the day and year aforesaid.

HERBERT H. WARD, JR.,
Notary Public,
State of Delaware.

HERBERT H. WARD, JR.,
Notary Public Delaware,
Appointed July 20, 1923,
for two years.

Filed and Recorded June 23, 1925.

Engineers' Exhibit No. 33 (Cont'd)

ENGINEERS PUBLIC SERVICE COMPANY (DELAWARE)

Terms of

$5 Dividend Convertible Preferred Stock As Fixed by Directors on July 3, 1928

RESOLVED, that the Board of Directors hereby fixes the terms of such series in the particulars required by said amended Certificate of Incorporation, as follows:

(a) The designation of such series shall be "$5 Dividend Convertible Preferred Stock".

(b) The fixed dividend rate thereof shall be $5 per share per annum.

(c) The fixed redemption premium thereof shall be $10 per share for shares redeemed on or before June 30, 1938 and shall be $5 per share for shares redeemed thereafter.

(d) Shares of such series shall be convertible, but only in blocks of 10 shares or any multiple of 10 shares, into Common Stock of this Company as constituted at the time of such conversion, on the basis, at the time, in the manner and under the conditions hereinafter set forth:

Basis: Respecting the first 40,000 shares of such series surrendered for conversion, for each 10 such shares, 21 shares of Common Stock; respecting the second 40,000 shares of such series surrendered for conversion, for each 10 such shares, 19 shares of Common Stock; respecting the third 40,000 shares of such series surrendered for conversion, for each 10 such shares, 17 shares of Common Stock; respecting the fourth 40,000 shares of such series surrendered for conversion, for each 10 such shares, 16 shares of

Engineers' Exhibit No. 33 (Cont'd)

Common Stock; respecting the last 160,000 shares of such series surrendered for conversion, for each 10 such shares, 15 shares of Common Stock. The term "shares of such series surrendered for conversion" shall for purposes of this paragraph be deemed to include any such shares represented by interim receipts surrendered for conversion.

Time: Shares of such series shall be convertible up to and including June 30, 1938 but not thereafter; provided, however, that with respect to any shares of such series called to be redeemed prior to June 30, 1938, the right to convert shall terminate on the tenth day next preceding the date fixed for redemption of such shares.

Manner and Conditions: The conversion right may be exercised by the surrender of certificates for shares of such series to the New York Transfer Agent of this Company (and/or to such officer or other agent of this Company as may hereafter be designated by its Board of Directors, notice of such designation to be mailed to each then holder of record of shares of such series), subject to such regulations as may at any time or from time to time be adopted by resolution or resolutions of the Board of Directors of this Company, of which certified copy or copies shall be filed with the New York Transfer Agent (and/or with any alternative or additional officer or other agent that may have been designated as above provided). Regulations so adopted may at any time or from time to time similarly be amended or repealed. Unless and until provisions for dividend adjustments shall be so adopted, no dividend adjustment shall be made upon any conversion.

ENGINEERS PUBLIC SERVICE COMPANY (DELAWARE)

Terms of

$5.50 Cumulative Dividend Preferred Stock As Fixed by Directors on October 5, 1928

RESOLVED, that the Board of Directors hereby fixes the terms of such series in the particulars required by the Amended Certificate of Incorporation, as follows:

(a) The designation of such series shall be "$5.50 Cumulative Dividend Preferred Stock".

(b) The fixed dividend rate thereof shall be $5.50 per share per annum.

(c) The fixed redemption premium thereof shall be $10 per share.

(d) Shares of such series shall have no right of exchange or conversion into shares of any other series of the Preferred Stock or into shares of any other class of stock of the Company.

Engineers' Exhibit No. 33 (Cont'd)

ENGINEERS PUBLIC SERVICE COMPANY
(DELAWARE)

Terms of

$6 Cumulative Dividend Preferred Stock
As Fixed by Directors on September 30, 1930

RESOLVED, that the Board of Directors hereby fixes the terms of such series in particulars not set forth in the Certificate of Incorporation or in any amendment thereto, as follows:

(a) The designation of such series shall be "$6 Cumulative Dividend Preferred Stock".

(b) The fixed dividend rate thereof shall be $6 per share per annum.

(c) The fixed redemption premium thereof shall be $10 per share.

(d) Shares of such series shall have no right of exchange or conversion into shares of any other series of the Preferred Stock or into shares of any other class of stock of the Company.

Engineers' Exhibit No. 37-A (Cont'd)

Pages 5-6:

ENGINEERS PUBLIC SERVICE COMPANY

Wilmington, Delaware,
February 21, 1934.

TO THE STOCKHOLDERS:

The consolidated earnings statement of your Company and its constituent companies for 1933, appearing on Page 12 of this report, shows a decrease in gross earnings of 7% under 1932. Electric department gross earnings were 76% of the total and declined 4% under the previous year. In this department residential earnings showed the greatest stability, declining only 2%. All classifications showed an improved trend toward the end of the year, although commercial and industrial revenues were still declining. Transportation department earnings, contributing 14% of the gross, decreased 15% under the previous year but increased slightly in December as compared with December, 1932. Part of this decrease was due to the elimination of three transportation subsidiaries as reported last year.

* * * * *

Three constituent companies failed to earn their preferred dividend requirements by a total of approximately $1,300,000. All the other constituent companies earned their preferred dividend requirements and reported balances totalling approximately $2,600,000 applicable to their common stocks, which are largely owned by your Company. The balance of consolidated earnings in the amount of $1,376,600 for the preferred stock of your Company, as reported on Page 12, is the net result of combining the deficits and balances set forth above, after adjusting for holding company expenses, inter-company items and minority interest, and failed by $946,900 to cover its preferred dividend requirements.

Engineers' Exhibit No. 37-A (Cont'd)

Engineers Public Service Company, the Parent Company, however, (whose income was derived principally from dividends of companies in the above group, which showed balances for common stock) had income of $2,354,000 in 1933 compared with $4,119,000 in the previous year. The balance available for preferred dividends was $2,141,800, which was $181,700 less than the total preferred dividend requirements. Consistent with this showing, no dividends were paid on the preferred stocks of your Company after July 1, 1933.

Bank debt of the Parent Company was reduced from $1,700,000 to $800,000; and total notes payable, including those of the Parent Company, decreased from $6,470,000 to $3,298,000. The reduction in these notes was made possible to a large extent by the sale of $1,050,000 face value of bonds of Louisiana Steam Generating Corporation and by the deferring of preferred dividends.

Reserves and Surplus

The combined reserves and surplus of the Company and its constituent companies on December 31, 1933, excluding from surplus cumulative preferred dividends not declared, amounted to 88.1% of the annual gross earnings or 12.3% of the book values of the properties. During 1933, 16.3% of the gross earnings was expended for maintenance or set aside for retirements.

Carrying the record back as far as figures are available on each of the companies of the Engineers group, for a period averaging about 29 years, a total of 9.1% of the entire gross earnings has been expended for maintenance and, in addition, during the same period, a total of 9.9% of these gross earnings has been set aside for reserves or retained as surplus after allowance for cumulative preferred dividends not declared.

Engineers' Exhibit No. 37-A (Cont'd)

Monthly Reports

For the more complete information of stockholders the Parent Company statements have been included in the regular monthly financial reports since December, 1932. Copies of these monthly reports will be sent to any stockholder or other person requesting them.

El Paso Natural Gas Company

In 1931 your Company purchased $3,500,000 First Mortgage 6% Bonds of Western Gas Company, a subsidiary of El Paso Natural Gas Company, together with an option which, if exercised, would give control of the latter company. During 1933 these bonds, were exchanged for $3,313,600 of Second Mortgage 6% Bonds of Western Gas Company and $186,400 of 6% Debentures of El Paso Mortgage Corporation. This was done as part of an arrangement through which funds were obtained from the R. F. C. for the construction of a natural gas pipe line extension to Tucson and Phoenix, Arizona. The Second Mortgage Bonds of Western Gas Company are guaranteed by El Paso Natural Gas Company. The terms of the option to purchase the controlling interest in El Paso Natural Gas Company were changed to a more favorable basis in connection with the exchange of these bonds.

The extension to Tucson and Phoenix was completed early in January, 1934. Western Gas Company has contracted to sell gas to the distributing companies in these communities.

* * * * *

Pages 8-9:

Puget Sound Power & Light Company

Gross earnings for the year decreased 7%, but for the last six months decreased only 2%. Better conditions in the lumber industry and in foreign commerce were im-

portant factors in this relative improvement. During the last two years new taxes have been levied against the company amounting to more than $600,000 on an annual basis. These include City of Seattle occupational tax, $120,000; State occupational tax, $325,000, and Federal 3% tax on electricity, $200,000. The City of Seattle occupational tax is being contested in the Supreme Court of the United States.

The company paid off $1,924,000 of bonds maturing on June 1, 1933 and, in addition, reduced its bank debt from $2,850,000 to $1,960,000 during the year. This was made possible to a large extent by deferring cumulative preferred dividends in the amount of $2,134,000 for the year.

Two orders of the Department of Public Works of the State of Washington, to reduce certain rates, have been reversed by the courts. The Department recently instituted a state-wide investigation of all electric rates and is at present engaged in an examination of this company's accounts and records.

The Public Works Administration has approved two major hydroelectric projects in the State of Washington which may affect the business of this company. The Grand Coulee development, estimated to be completed in 1938 at a cost of $63,000,000 and to furnish 250,000 kilowatts of primary power, is situated on the Columbia River about 70 miles from this company's system at its nearest point and 160 miles from Seattle. The other project, the Bonneville development, is estimated to cost $21,000,000 for the original installation which will furnish 90,000 kilowatts of capacity. While this project is also on the Columbia River it affects more directly utilities serving the Portland, Oregon, area since it is located about 40 miles from that city.

(Minority Interest Excluded)

	1933	1932	Increase
Earned Surplus at Beginning of Year	$5,179,539.77	$5,292,091.16	$ 112,551.39*
Balance for Dividends of Engineers Public Service Company as above	1,376,627.10	4,190,051.80	2,813,424.70*
Total	$6,556,166.87	$9,482,142.96	$2,925,976.09*
Net Direct Charges			
Operating Items Applicable to Prior Years	443,651.40	260,636.28	183,015.12
Adjustment of Constituent Companies' Taxes for Prior Years	410,815.24	529,317.19	118,501.95*
Non-Operating Adjustments	250,231.85	43,247.73	206,984.12
Balance	$5,451,468.38	$8,648,941.76	$3,197,473.38*
Dividends Declared on Stocks of Engineers Public Service Company			
Preferred	1,161,774.83	2,323,549.29	1,161,774.46*
Common		1,145,852.70	1,145,852.70*
Earned Surplus at End of Year§§	$4,289,693.55	$5,179,539.77	$ 889,846.22*

* Decrease.

‡ Interest on funds for construction purposes of $90,444.30 (1932—$929,281.45) and income from miscellaneous investments.

** These amounts were earned except for $1,313,230.21 in the case of certain Constituent Companies and for $181,741.36 in the case of Engineers Public Service Company. Adjusting for minority interest and inter-company eliminations $1,304,278.38 of the former amount would be applicable to Engineers Public Service Company.

§ Deficit. This deficit adjusted for unearned preferred dividends of certain Constituent Companies, which are not a claim against either Engineers Public Service Company or its other Constituent Companies, would show a balance for the common stock of Engineers Public Service Company of $357,367.65.

§§ Before provision for cumulative dividends on Preferred Stock of Engineers Public Service Company not declared, $1,161,763.00 (1932—none). Excludes surplus of Constituent Companies accumulated prior to acquisition in the amount of $8,541,690.79.

Pages 5-6:

ENGINEERS PUBLIC SERVICE COMPANY

Wilmington, Delaware,
March 18, 1935.

Combined Earnings

The combined earnings statement of Engineers Public Service Company and its subsidiary companies for 1934, appearing on Page 14, shows an increase in gross earnings of subsidiaries of $1,952,477 or 4.7% over 1933, the first increase in annual gross earnings since 1930. However, this gain was more than offset by increases in operating expenses and taxes. These increases in expenses and taxes were due to causes most of which were mentioned in the 1933 Annual Report, namely, higher prices of fuel and other materials, increased labor costs and increased taxation of various kinds. The increase in taxes alone, amounting to $1,053,229, absorbed more than half the increase in gross earnings. The combined balance after operating expenses and taxes decreased $526,966 or 2.8%.

The conventional consolidated statement, such as the Company has heretofore issued, furnished a convenient and informative summary of system earnings during normal periods. Under present conditions, however, when certain subsidiaries are failing by substantial amounts to earn their cumulative preferred dividend requirements, this conventional statement in some respects fails to present a clear picture of the earnings of the system. The amount by which an individual subsidiary does not earn its cumulative preferred dividend requirements, which deficiency is deducted in the conventional consolidated statement, is not a claim against the earnings of other subsidiaries or against the holding company, although it constitutes a claim against the subsidiary in arrears to the extent that it must be satisfied before such subsidiary can pay any common dividend.

Engineers' Exhibit No. 37-B (Cont'd)

The Company has heretofore called this condition to the attention of stockholders by comment in the Annual Report and by notes in the monthly reports, but in order further to clarify the situation, certain changes have been made in the consolidated statement on Page 14 and a second compilation of earnings figures is also presented on Page 16, which, by showing additional details, should be helpful to stockholders in appraising the earnings position of the Company.

It will be noted on Page 16 that two subsidiaries had deficiencies, totaling $1,384,523, for their common stocks owned by the Parent Company on account of failure fully to cover their cumulative preferred dividend requirements, which total deficiency is not a claim against the Parent Company or the other subsidiaries. The combined balances for common stocks owned by the Company of all other subsidiaries totaled $2,493,184. These 1934 totals compare with total deficiencies of $1,301,394 and total balances of $2,728,193 for 1933. In a sense Engineers Public Service Company, as the owner of the common stocks of the two subsidiaries which had such deficiencies, suffers a loss on its investment therein equal to the sum of such deficiencies. The question whether such a loss should be shown as a deduction before arriving at the consolidated balance of the Company and its subsidiaries carried to Surplus for the year is one on which judgments might differ. Since, however, the loss occurred during the year and results from a definite known cause, the Company's auditors have advised, and there has been made, an allowance for such unearned preferred dividends in arriving at the balance for the year carried to Surplus which balance amounted to $1,111,859 for 1934 as compared with $1,376,627 for 1933. Thus the Earned Surplus as reported on the Consolidated Balance Sheet reflects the deduction of these deficiencies.

If allowance for the deficiencies resulting from unearned preferred dividends had not been made in the 1934 income statement, a balance of $2,496,261 applicable to

Engineers' Exhibit No. 37-B (Cont'd)

Engineers Public Service Company for the year would have been shown instead of the balance above stated. The balance for 1933 on the same basis would be $2,677,941.

Three subsidiaries failed to pay cumulative preferred dividends in 1934 totaling $2,188,348 on shares held by the public. The total accumulated and unpaid preferred dividends of all subsidiaries at the end of the year amounted to $5,011,931. Notes Payable of subsidiaries were reduced from $2,498,329 to $853,754, largely by this deferring of preferred dividends.

Preferred Dividends

No dividends have been declared or paid on the preferred stocks of Engineers Public Service Company since July 1, 1933. Resumption of preferred dividend payments depends on many considerations. The Company has, during the year, retired all its own bank debt. However, increasing labor, fuel and material costs, increasing taxes, the existing antagonistic attitude of the Federal administration towards utilities, and the proposed Federal legislation to eliminate holding companies and stringently regulate operating companies, all suggest a cautious policy with respect to preferred dividends. At January 1, 1935 six quarterly cumulative preferred dividend payments had been deferred, representing a total accumulated unpaid amount of $3,485,289.

Legislation

There has already been mailed to you a short letter calling your attention to the serious effect on the Company and on its subsidiaries of the proposed Public Utilities Act of 1935 now before Congress if it is enacted in its original proposed form.

The Engineers Company holds no brief for any abuses in the utility industry, but it earnestly urges that proper regulation and not destruction is the fair and reasonable

Engineers' Exhibit No. 37-B (Cont'd)

course to pursue with respect to holding companies and that there is no justification for the drastic proposals contained in the original draft of the Act, which proposes to eliminate holding companies such as Engineers Public Service Company and to oppress operating companies.

* * * * *

Pages 7-9:

Retirement Reserve

The subsidiaries of Engineers Public Service Company, in general, follow a policy of providing for retirement of property through the retirement reserve method. This method does not provide for so-called depreciation by setting aside each year some fixed percentage of the value of depreciable property, but seeks to provide for retirements as they seem likely to occur. The useful life of well-maintained electric or gas property is indefinite and can not be accurately estimated because retirements usually are rendered expedient by development of the business or obsolescence rather than by wear. The flexibility of the retirement reserve method is a distinct advantage because in good years, when the growth of the business or some other factor is apt to accelerate retirements, it enables the setting aside of larger appropriations than in poor years. We believe this method is sound and its application to the subsidiaries of Engineers Public Service Company has been founded upon judgment based on intimate knowledge of the properties. The retirement reserve method of accounting is authorized by the Uniform Classification of Accounts prescribed by those public service commissions under whose jurisdictions the major subsidiaries operate. Officials of the Bureau of Internal Revenue, for income tax purposes, use a different method known as the straight-line method of determining depreciation which is based on an assumed life of the property or of its component parts, and in filing

income tax returns the subsidiaries have conformed to this method. This results in the Federal income tax returns of the subsidiaries showing as deductions for depreciation sums which vary considerably from their appropriations to Retirement Reserve. It is estimated that the subsidiaries will claim in their 1934 Federal income tax returns as deductions for depreciation a total of approximately $7,700,000, while the appropriations from earnings to Retirement Reserve for that year totaled $4,805,711. Similarly, the total of the depreciation reserves accumulated on the straight-line basis used for income tax purposes would now substantially exceed the total of the companies' reserves based on the retirement reserve method.

It should be remembered that maintenance is designed to keep up original operating efficiency. It is an entirely separate account from the Retirement Reserve, which through its credits and charges provides for the discarding of property from service.

During a period averaging about 30 years, for which records are available, the companies in the Engineers group have expended for maintenance a total of 8.9% of the entire gross earnings for the period, and in addition have set aside for Retirement Reserve or retained as Surplus, after allowance for preferred dividends not declared, a total of 9.6% of these gross earnings.

Service Arrangements with Affiliated Companies

Over 91.5% of the common stock of Engineers Public Service Company (Delaware) is owned by Stone & Webster, Incorporated. The Engineers Company and its subsidiaries have certain service arrangements with Stone & Webster, Incorporated and with several of that company's subsidiaries, which arrangements are reviewed hereinafter.

Engineers Public Service Company, Inc., a mutual service organization wholly owned by the operating subsidiary companies of Engineers Public Service Company, provides

Engineers' Exhibit No. 37-B (Cont'd)

to these subsidiaries the economies of group operation with respect to certain facilities and services, which, through centralized handling, offer savings in expense and more effective service. These services are furnished on a non-profit basis. Certain of them are obtained from Stone & Webster, Incorporated and several of its subsidiaries on a non-profit basis. The cost of all services to operating subsidiaries is allocated proportionately among them. In 1934, the aggregate of these charges was $279,449 (1933—$269,296). The mutual service organization also furnishes certain services to Engineers Public Service Company. Charges for these services are based on cost, and in 1934 amounted to $58,000 (1933—$60,000). A more complete statement in regard to these arrangements and a detail of costs and charges, together with an Income Statement and a Balance Sheet of the mutual service organization, appears on Pages 24 and 25.

Each of the principal operating subsidiaries has a so-called term contract with Stone & Webster Engineering Corporation covering consulting engineering and construction service, under which, if it elects to use such service, it pays the Engineering Corporation for consulting engineering on an approximate cost basis, namely, at two-thirds of the per diem rates regularly charged by this Corporation and for construction service on a percentage fee basis which, by reason of the contract, is slightly lower than the regular fee schedule of the Engineering Corporation. In 1934, the total paid under these contracts amounted to $55,190 (1933—$23,650).

In addition to employing a New York transfer agent, the Company employs Stone & Webster Service Corporation as transfer agent in Boston. To the Service Corporation, the Company pays for transfer service, fees in substantial conformity with the customary charges made for similar services by other Boston transfer agents. In 1934, the Company paid to the Service Corporation for this transfer work and related services $8,483 (1933—$10,282). A num-

Engineers' Exhibit No. 37-B (Cont'd)

ber of the subsidiaries also employ the Service Corporation in this same capacity and the total paid for these services by these subsidiaries in 1934 was $24,059 (1933—$28,103).

Lybrand, Ross Bros. & Montgomery examined the accounts of the Company and of its subsidiaries; their report thereon appears on Page 12. In addition, each of the operating subsidiaries (except Puget Sound Power & Light Company and its subsidiaries, which maintain their own facilities for this purpose) employs Stone & Webster Service Corporation to make examinations of the methods and details of accounting practice as well as of the efficiency of the accounting personnel. There are no formal contracts covering these arrangements with the Service Corporation and this work is done substantially at cost. In 1934, the total paid by the subsidiaries to the Service Corporation for this service amounted to $14,645 (1933—$37,560).

Practically all the securities sold by the Company or by its subsidiaries since they have had this status, have been sold through investment banking groups, which included, in each case, Stone & Webster and Blodget, Inc. or its predecessors.

Page 10:

Puget Sound Power & Light Company

Gross earnings for the year increased $624,780 or 5%, this being the first increase for any year since 1930. While business conditions in the area served by this company continued at subnormal levels, there was an improvement over the previous year. The improvement in gross earnings was more than offset by increases in expenses and taxes. The largest factor contributing to the increase in expenses was the general rate investigation instituted by the State Commission, the cost of which recent legislation places on the company. Costs of preparation of inventor information for the commission and the cost of work done

Engineers' Exhibit No. 37-B (Cont'd)

in preparing a defense against rate cases amounted to $450,000 in 1934, an increase of $340,000 over 1933. Taxes increased $501,215 or 35.9% and now represent 14.3% of total gross earnings. This increase reflects the operation of the Federal 3% tax and the Washington occupational tax over the full year's period.

Because of the financial condition of this company, the deferment of all dividends has been continued, enabling the company to reduce its bank debt from $1,960,000 to $750,000 during the year and this debt has since been completely discharged. On January 1, 1935, the company paid at maturity $169,000 of Twin City Light and Traction Company bonds. On November 1, 1935, $1,167,000 of Whatcom County Railway & Light Company bonds, an underlying issue assumed by the Puget Sound company, will mature, but thereafter the company will have no important maturity until March 1, 1939.

Load building on the existing distribution system is essential to meet rising costs and the company has launched an aggressive sales campaign for 1935, including a long-term monthly payment plan to promote the sale of major appliances. The construction of two Federal hydroelectric plants on the Columbia River was discussed in the 1933 Annual Report. While the construction of these plants has proceeded according to schedule, no agency has as yet been created to handle the distribution of the power to be produced. An amendment to the State constitution providing for the entry of the State into the power business has been passed by the State legislature and will be voted on in the 1936 general election.

* Decrease.

(a) See page 17 for detail.

(b) Income from miscellaneous investments.

(c) These amounts have been appropriated to provide a reserve (see Retirement Reserve account in Balance Sheet) against which property retirements will be charged as they occur. The amounts so appropriated are less than the depreciation deductions claimed or to be claimed on Federal income tax returns which are based on a straight-line method and the resulting reserve is less than a Depreciation Reserve would be if based on such straight-line method.

(d) Charges.

(e) Excludes surplus of Subsidiary Companies accumulated prior to acquisition in the amount of $8,141,540.21.

Engineers' Exhibit No. 37-B (Cont'd)

Contingent Liabilities:

There are possible claims for additional Federal income taxes for the years 1927 to date, in excess of claims for refunds which have been filed, and suits and assessments pending (not provided for in the above balance sheet) on which the final recoveries, as estimated by counsel, will not materially affect the Companies' financial condition.

* Decrease.

(a) The consolidated plant and property account, as stated above, is based on (1) the stated value of securities issued and cash paid by Engineers Public Service Company for securities of its subsidiaries, (2) the par or stated value of securities of subsidiaries outstanding in the hands of the public at date of acquisition by Engineers Public Service Company of its interest in these subsidiaries, with proper adjustment for net assets (other than plant and property) of such subsidiaries at such date of acquisition and for minority capital stock interest in the preacquisition surplus of such subsidiaries, (3) the cost of additions to plant and property since the acquisition of such interest in subsidiaries, less abandonments or other property retirements, and (4) amounts aggregating $8,749,745 arising from revaluations since acquisition, less retirements applicable thereto.

(b) Includes: City of Seattle Municipal Street Railway 5% Bonds of 1919 (Pledged under the First and Refunding Mortgage of Puget Sound Power & Light Company) $8,336,000.00; Mortgage Notes due 1935 (Pledged under First Mortgage of Pacific Coast Power Company) $200,000.00; 6,870 shares Stone & Webster, Inc., Capital Stock (quoted market value $32,632.50) $436,157.42; Western Gas Company, Second Mortgage 6% Bonds due 1936/8, $3,313,600.00; El Paso Mortgage Corporation, 6% Debentures due 1936/8, $186,400.00; Miscellaneous stocks, bonds and notes (no quoted value), less reserve of $168,111.70, $534,508.18.

(c) Represented by: 158,080 shares $5 (Cumulative) Dividend Convertible Preferred, 196,932 shares $5.50 Cumulative Dividend Preferred and 75,000 shares $6 Cumulative Dividend Preferred, of no par value (entitled in liquidation to $110 per share if voluntary, otherwise $100 per share). Total Preferred Stock authorized 431,000 shares.

(d) Represented by: 1,909,817 shares (1933—1,909,802 shares) of no par value. Authorized 2,349,000 shares.

(e) Includes: $1,657,821 transferred from surplus, representing the increase in plant and property account originating from an appraisal made of the properties of a Subsidiary Company at date of merger.

(f) Excludes: $10,070,000 (1933—$12,632,500) bonds held in Sinking Funds and Treasury, uncancelled; $1,312,500 (1933—$3,670,000) treasury bonds pledged as security for a portion of notes payable to banks; $6,392,000 bonds reacquired and pledged as security under indentures securing bonds outstanding; $15,630,000 (1933—$4,950,000) mortgage bonds pledged as security, to the extent of $1,250 for each $1,000, for $12,504,000 (1933—$3,960,000) convertible bonds which are convertible into a like principal amount of the pledged bonds, plus $50 in cash per $1,000 of bonds so converted. Includes: $1,178,000 bonds due in 1935.

(g) Excludes: $80,500 (1933—$80,500) coupon notes held in Treasury, uncancelled.

(h) Payable by Subsidiaries, against $750,000 of which bonds of a Subsidiary Company are pledged.

(i) See note (c) on preceding page.

(j) Before provision for cumulative dividends on Preferred Stock of Engineers Public Service Company not declared, $3,485,289.00; Excludes surplus of Subsidiary Companies accumulated prior to acquisition in the amount of $8,141,540.21.

Note: Engineers Public Service Company has outstanding Common Stock Purchase Warrants, which were originally issued attached to certificates for the $5.50 Cumulative Dividend Preferred Stock, to purchase 196,932 shares of Common Stock at $68 per share on or before November 1, 1938. Virginia Electric and Power Company, a Subsidiary Company, has outstanding an issue of bonds due in 1944 which carry the right of conversion into common stock of said Virginia Electric and Power Company on a present basis of 100 shares of common stock for each $1,000 principal amount of bonds, or a total of 902,600 shares.

Pages 5-7:

ENGINEERS PUBLIC SERVICE COMPANY

Wilmington, Delaware,

March 16, 1936.

TO THE STOCKHOLDERS:

Engineers Public Service Company is a public utility holding company whose income is derived exclusively from interest and dividends on securities owned. It received total income of $1,396,170 in 1935, as compared with $1,260,612 in 1934. After deduction of expenses, taxes and interest, there was a balance of $1,233,923 applicable to preferred dividend requirements of $2,323,537. In 1934 the corresponding balance amounted to $1,103,142. The income statement and balance sheet appear on pages 14 and 15.

The combined gross earnings of subsidiary companies for 1935, as shown in the statement on page 16, were $45,085,533, an increase of $1,397,836, or 3.2%, over 1934, and the combined balance after operating expenses and taxes was $18,875,700, an increase of $837,442, or 4.6%. Part of the improvement in this balance was the result of reductions in Federal income taxes of more than $300,000 due largely to non-recurring deductions from income for tax purposes allowable in connection with the calling of substantial amounts of the bonds of certain subsidiary companies.

Two subsidiary companies failed to earn their preferred dividend requirements for the year 1935 and reported deficiencies for their common shares totaling $1,058,369, of which $1,051,236 is applicable to the shares owned by Engineers Public Service Company. Although this deficiency is not a claim against the Engineers Company or its other subsidiaries, it must be included in the consolidated earnings. All the other subsidiaries earned their preferred

dividend requirements and in addition had balances totaling $2,676,686 for their common shares, of which $2,669,829 is applicable to shares owned by the Engineers Company and this amount is included in the consolidated earnings. To this balance is added the other earnings of the Engineers Company and from the total is deducted its expenses, taxes and interest, and the deficiency of earnings of the two subsidiaries hereinbefore mentioned, to produce the consolidated balance of earnings applicable to the stocks of the Engineers Company. This consolidated balance was $1,605,868 in 1935 compared with $1,111,859 in 1934. The complete earnings statement which appears on pages 16 and 17 is further supported by the tabulation on page 21 showing the contribution by each subsidiary company to the consolidated balance.

Although only two subsidiaries failed to earn their preferred dividends in 1935, three did not pay full cumulative preferred dividends; the total of these unpaid dividends was $2,173,344. The total unpaid cumulative preferred dividends on shares of subsidiaries held by the public at the end of the year amounted to $7,185,275.

Preferred Dividends

No dividends have been declared or paid on the preferred stocks of Engineers Public Service Company since July 1, 1933. The total unpaid cumulative preferred dividends at the end of the year amounted to $5,808,843. Resumption of the payment of preferred dividends depends primarily upon earnings and upon the ability of the Company to comply with applicable laws. Any such consideration is further complicated by the uncertainty which exists with respect to the application to the Company and to its subsidiaries of the provisions of the Public Utility Act of 1935 and with respect to the legal steps taken by the Company and by certain of its subsidiaries to determine their status thereunder, which steps are discussed hereafter.

Engineers' Exhibit No. 37-C (Cont'd)

Public Utility Act of 1935

The Public Utility Act of 1935 (Wheeler-Rayburn Bill) was proposed and enacted to provide Federal regulation of both holding and operating utility companies. During the period when this Bill was before the Congress for consideration, the Company and certain of its subsidiaries sent several communications to stockholders calling to their attention certain destructive and unfair features proposed, which particularly affected these companies. A very drastic measure was finally enacted by the Congress and became a law on August 26, 1935.

This Act actually undertakes far more than filling the existing gaps in regulation, namely, the regulation of holding companies and of interstate transmission and sale of electric energy; it undertakes, except as to narrowly restricted regional systems, the elimination of public utility holding companies, and, in addition, a domination over subsidiaries of registered holding companies (whether engaged in interstate commerce or not) and over public utilities engaged in interstate transmission or sale of electric energy so complete as to threaten the effectiveness of local regulation of utilities and to threaten to supplant the functions of private management.

Since its enactment the officers and directors of the Company have been giving careful consideration to the effect of this far-reaching Act upon the Company and its subsidiaries. The Company consulted counsel who advised that Title I of the Act was unconstitutional. Accordingly, the Company brought a Bill of Complaint in the Federal District Court at Wilmington, Delaware, alleging the unconstitutionality of Title I of the Act and the irreparable injury that the Company would sustain by compliance with its provisions and praying for injunctive relief. Three subsidiaries directly affected by Title I also started actions in the Federal courts. Stockholders were advised of these actions in letters dated November 27, 1935. Counsel advise

that the defendant local Federal officers do not intend to defend the suits. In the opinion of counsel, such action by said defendants will result in the entry of injunctions against the local Federal officers and such injunctions will be effective to preserve the existing status as to the plaintiff companies until final determination by the United States Supreme Court as to the validity of Title I of the Act.

Title II of the Act applies broadly to four subsidiary companies, since they are "public utilities" as defined therein. In its declaration of policy this Title proposes to regulate only those interstate phases of business of operating utilities not subject to regulation by State or local authorities, which phases, therefore, are properly a concern of the Federal government. However, as the full provisions of this Title are studied, it becomes clear that its effect far exceeds this declaration of policy. Under certain of these provisions this Title attempts to give the Federal Power Commission authority to compel all operating companies, whether interstate or not in their operations, to file certain information and reports and comply with certain regulations of the Commission.

Should it develop, in the administration of Title II, that these companies or other subsidiaries would be subjected to requirements which were both injurious and, in the opinion of counsel, beyond the constitutional power of the Federal government, it might become necessary to institute court proceedings to prevent such damaging and unconstitutional encroachment of Federal regulation.

Simplification of Corporate Structure

Since its organization in 1925, the Company has endeavored to simplify its corporate structure by eliminating subsidiaries whenever practicable. Further progress was made in this respect during the past year in the Puget Sound and Virginia Companies. Twenty-eight underlying companies, existing when the properties were acquired by the Engineers Company, have been eliminated until at

Engineers' Exhibit No. 37-C (Cont'd)

present seven of its ten directly owned companies have no underlying subsidiaries.

Puget Sound Power & Light Company is now the only directly owned operating company which has subsidiaries. This company has two operating subsidiaries, one of which conducts an interstate transportation business and the other a small ice and cold storage business.

The remaining two directly owned companies which have subsidiaries are intermediate holding companies, namely, Eastern Texas Electric Company (Delaware) and El Paso Electric Company (Delaware). These two companies were in existence prior to the organization of the Engineers Company. It has been the purpose of the Engineers Company for some time to eliminate the Eastern Texas Company, but the high cost, largely in transfer and stamp taxes, and the difficulties now presented under the Public Utility Act of 1935 have delayed this elimination. This company has an operating subsidiary, The Western Public Service Company, which, in turn, has two small operating subsidiaries, one a Missouri company and the other a Kansas company, which are maintained because of State laws.

The other intermediate holding company, El Paso Electric Company (Delaware), has three operating subsidiaries which form one integrated system operating in Texas, New Mexico and Mexico. The requirements of State and other laws make impracticable the consolidation of this system into one company. Also El Paso Electric Company (Delaware) has outstanding in the hands of the public a substantial amount of preferred stock and a small amount of common stock.

The corporate relationship of the companies comprising the Engineers group is shown in chart form on page 67.

El Paso Natural Gas Company and Western Gas Company

Engineers Public Service Company has held options to purchase common stock of El Paso Natural Gas Company

Engineers' Exhibit No. 37-C (Cont'd)

and, through its subsidiary Engineers Securities Corporation, has owned $3,313,600 principal amount of second mortgage bonds of Western Gas Company, a subsidiary of El Paso Natural Gas Company, and $182,000 principal amount of debentures of El Paso Mortgage Corporation.

As of July 1, 1935 arrangements were effected for the extension to January 1, 1944 of the indebtedness of Western Gas Company including its second mortgage bonds and also of the indebtedness of El Paso Mortgage Corporation, all of which indebtedness would have matured in 1936 subject to a possible extension to 1938. The options held by the Engineers Company to purchase common stock of El Paso Natural Gas Company were modified and extended to January 1, 1944 and in addition Engineers Public Service Company acquired an option to purchase the common stock of El Paso Mortgage Corporation exercisable on or before the same date. El Paso Natural Gas Company has also executed new guarantee agreements with respect to principal, interest and sinking fund payments on the second mortgage bonds of Western Gas Company and debentures of El Paso Mortgage Corporation.

Pages 9-10:

Service Arrangements with Affiliates

Over 91.5% of the common stock of Engineers Public Service Company (Delaware) is owned by Stone & Webster, Incorporated. The Engineers Company and its subsidiaries, directly or through a mutual service organization, Engineers Public Service Company, Inc., have certain service arrangements with Stone & Webster, Incorporated and with certain of that company's subsidiaries, which arrangements are reviewed hereafter.

The mutual service organization is wholly owned by the operating subsidiaries of Engineers Public Service Company and provides to these subsidiaries the economies of group operation with respect to certain facilities and services, since centralized handling enables savings in ex-

Engineers' Exhibit No. 37-C (Cont'd)

penses and more effective service. These services are furnished on a non-profit basis by the mutual service organization. The services obtained from Stone & Webster, Incorporated and from certain of that company's subsidiaries, are obtained substantially on a non-profit basis. The cost of all services applicable to the operating subsidiaries is allocated proportionately among them on the basis of their respective gross earnings. In 1935, the aggregate of these charges was $286,528, equivalent to six tenths of one percent of combined gross earnings (1934—$279,449). The mutual service organization also furnishes certain services to the holding companies in the Engineers group at cost and to other companies. The fees for such services in 1935 amounted to $75,478 (1934—$70,444), of which Engineers Public Service Company paid $61,500 (1934—$58,000). A comparative statement showing charges made to each of the companies served is set forth on page 30.

Each of the principal operating subsidiaries has a so-called "term contract" with Stone & Webster Engineering Corporation covering consulting engineering and construction service to the extent permitted by law, under which the subsidiary, if it elects to use such service, pays the Engineering Corporation for consulting engineering on an approximate cost basis, namely, at two-thirds of the per diem rates regularly charged by that corporation and for construction service on a percentage fee basis which, by reason of the contract, is slightly lower than the regular fee schedule of the Engineering Corporation. In 1935, the total charges under these contracts amounted to $35,080 (1934—$55,190).

The Company employs Stone & Webster Service Corporation as Transfer Agent in Boston, in addition to a New York transfer agent, and pays the Service Corporation for transfer service, fees in substantial conformity with the customary charges made for similar services by other Boston transfer agents. In 1935, the Company paid to the Service Corporation for this transfer work and related

Engineers' Exhibit No. 37-C (Cont'd)

services $6,844 (1934—$8,483). A number of the subsidiaries also employ the Service Corporation as Transfer Agent and the total paid by these subsidiaries in 1935 was $24,318 (1934—$24,059).

Each of the operating subsidiary companies (except Puget Sound Power & Light Company and its subsidiaries) employs Stone & Webster Service Corporation to make examinations of the methods and details of accounting practice as well as of the efficiency of the accounting personnel. There are no formal contracts covering these arrangements with the Service Corporation and this work is done substantially at cost. In 1935, the total paid by the subsidiaries to the Service Corporation for this service amounted to $21,549 (1934—$14,645). This work is supplementary to the independent audits of the accounts of these companies by Lybrand, Ross Bros. & Montgomery.

Practically all of the securities sold by the Company, or by its subsidiaries since they have had this status, have been sold through investment banking groups which included, in each case, Stone & Webster and Blodget, Incorporated, or its predecessors. Neither the Company nor any of its subsidiaries has a contract for financing service with this affiliate. During 1935 Savannah Electric and Power Company sold $4,500,000 principal amount of 5% bonds at 97 to an underwriting group which in turn offered them to the public at par. Virginia Electric and Power Company sold $37,500,000 principal amount of 4% bonds at 99 to another underwriting group which in turn offered these bonds to the public at 101¼. Stone & Webster and Blodget, Incorporated was a member of each of these groups, underwriting $1,665,000 principal amount of the Savannah bonds and $7,687,000 principal amount of the Virginia bonds.

Engineers' Exhibit No. 37-C (Cont'd)

Page 11:

Puget Sound Power & Light Company

Combined gross earnings for the year increased $627,790, or 4.7%, reflecting the improvement in business conditions. Electric department earnings increased $459,456, or 4.2%, despite rate reductions, some of which became effective when the State Commission agreed to suspend the general rate case in August 1935. Transportation earnings increased $121,194, or 8.5%. Total expenses increased $503,725, or 8.9%, largely as a result of salary and wage restorations. Taxes decreased $138,551, or 7.3%, under 1934, as a result of reduced real estate and personal property taxes under the new 40-mill limit law.

A maturity of $1,167,000 of underlying bonds was met on November 1, 1935 and bank debt at the end of the year was $300,000 as compared with $750,000 at the end of 1934. No dividends were paid during the year. The company has maturities in 1939 and 1940 totaling approximately $8,600,000.

Construction of the Grand Coulee and Bonneville projects on the Columbia River with Federal money is proceeding steadily but as yet there has been no agency created to market the power to be produced. The State Grange organization is active in promoting the formation of county-wide power districts to be voted upon in the general 1936 elections and an amendment to the State constitution will also be voted upon at that time which provides for the entry of the State into the power business.

It has been proposed that the city of Seattle acquire a substantial portion of the company's property thereby eliminating this competitive situation, but no formal offer has been made. The city is also trying to secure a Federal loan with which to refund, at a substantial discount, the Municipal Street Railway bonds owned by this company.

Engineers' Exhibit No. 37-D (Cont'd)

Pages 5-7:

Wilmington; Delaware.

March 11, 1937.

TO THE STOCKHOLDERS:

Engineers Public Service Company is a public utility holding company whose income is derived primarily from dividends and interest on securities owned. It received total income of $2,763,564 in 1936, as compared with $1,396,170 in 1935. After deduction of expenses, taxes and interest, there remained a balance of $2,537,891, which amount was $214,354 in excess of annual preferred dividend requirements of $2,323,537. In 1935 the corresponding balance for dividends amounted to $1,233,923. The above figures for 1936 do not include a net profit of $609,460, credited direct to earned surplus, realized in connection with its holdings in El Paso Natural Gas Company.

The combined gross earnings of subsidiary companies for 1936, as shown in the statement on page 16, were $48,721,361, an increase of $3,635,828 or 8.1% over 1935, and the combined balance after operating expenses and taxes was $20,223,764, an increase of $1,348,063 or 7.1%.

Two subsidiary companies, Puget Sound Power & Light Company and The Key West Electric Company, failed to earn their full preferred dividend requirements for the year 1936 and reported deficiencies for their common shares of which $474,496 was applicable to the shares owned by Engineers Public Service Company. Although this deficiency is not a claim against the Engineers Company, it reduces the consolidated earnings. All other subsidiaries earned their preferred dividend requirements and in addition had balances for their common shares of which $3,451,241 was applicable to shares owned by the Engineers

Company. The other earnings of the Engineers Company are added to this balance and from this total are deducted its expenses, taxes and interest and the deficiency of earnings of the two subsidiaries hereinbefore mentioned. The balance so produced is the consolidated balance applicable to the stocks of the Engineers Company. In 1936 this balance was $2,946,392 as compared with $1,605,868 in 1935. The complete earnings statement which appears on pages 16 and 17 is further supported by the tabulation on page 21 showing the contribution by each subsidiary to the consolidated balance.

In addition to the two subsidiaries which failed to earn their full preferred dividend requirements in 1936, a third had cumulative preferred dividends in arrears at the end of the year. The total unpaid cumulative preferred dividends on shares of these three subsidiaries held by the public amounted to $8,881,455 at the end of the year, of which amount $8,788,870 was unpaid by Puget Sound Power & Light Company.

Reduction in Capital

At the annual meeting of Engineers Public Service Company in May 1936, the stockholders voted to reduce the amount of capital of the Company from $99,135,146 to $42,985,601 by reducing the amount of capital represented by the outstanding shares of common stock from $58,059,513 to $1,909,968. The stockholders also voted to reclassify the shares of common stock without par value by changing the same into shares of common stock with a par value of $1 per share. The number of shares outstanding was not changed. The result of this action was to create a capital surplus which permitted an allowance for possible shrinkage in the value of the security holdings of the Company brought about by changed conditions and also placed the Directors in a position where they might consider the declaration of dividends.

Engineers' Exhibit No. 37-D (Cont'd)

Preferred Dividends

During the year payments were made aggregating two full years' dividend requirements on account of cumulative dividends accrued and in arrears on the preferred stocks of Engineers Public Service Company, as follows: A dividend of 80% of a full year's requirement was paid August 1 to stockholders of record July 15, and a dividend of 120% of a full year's requirement was paid November 2 to stockholders of record October 15.

A dividend of 75% of a full year's requirement has been declared payable April 1, 1937 to stockholders of record March 10, 1937. After the payment of this dividend, accumulated and unpaid dividends will amount to a total of $2,323,537 or one year's requirement.

Public Utility Act of 1935

The status of Engineers Public Service Company and its subsidiaries with respect to this Act did not change greatly during 1936. The Bill of Complaint brought by the Company alleging the unconstitutionality of Title I of the Act, damage to the Company from compliance therewith and praying for injunctive relief, remains undefended by the defendant local Federal officers in the Federal District Court at Wilmington, Delaware, and no action has been taken toward enforcement of the law against the Company. A similar situation exists with respect to two subsidiaries, namely, Eastern Texas Electric Company (Delaware) and El Paso Electric Company (Delaware), which also filed Bills of Complaint in this same court. A Bill of Complaint brought by a third subsidiary, The Western Public Service Company, was not defended by the defendant local Federal officers in the Federal District Court at Baltimore, Maryland, and a final decree was entered on April 27, 1936 permanently enjoining said Federal officers from the enforcement of the law against that company. With minor exceptions, the provisions of Title I of this Act did not apply

Engineers' Exhibit No. 37-D (Cont'd)

during 1936 to any subsidiaries other than the three mentioned above, since no holding company in the group had registered under this Title.

During 1936 and since the beginning of the current year two decisions of importance have been rendered in cases involving the constitutionality of Title I. The United States Circuit Court of Appeals for the Fourth Circuit, in the case of Burco, Inc. v. Whitworth, et al., held that the Act was unconstitutional so far as it related to a holding company which was not engaged in interstate commerce. Subsequently, the United States District Court for the Southern District of New York, in the case of Securities and Exchange Commission v. Electric Bond & Share Company et al., rendered a decision upholding the separability of the provisions requiring registration of holding companies from the rest of Title I of the Act and holding such registration provisions to be constitutional, at least so far as they apply to a holding company directly or indirectly engaged in interstate commerce. In view of these decisions the Company and its three above-mentioned subsidiaries are reviewing their status with respect to registration. The stockholders will be informed if any change is brought about as a result.

Counsel has advised that five subsidiaries, namely, El Paso Electric Company (Texas), Gulf States Utilities Company, Virginia Electric and Power Company, The Western Public Service Company and Missouri Service Company are "public utilities" as defined in Title II of the Act and that, therefore, they are subject to the provisions of this Title. Puget Sound Power & Light Company is a "licensee" under the Federal Water Power Act of 1917 and is therefore subject to the provisions of Title II of the Act insofar as they apply to "licensees".

In accordance with a requirement of this Title, Gulf States Utilities Company obtained approval from the Federal Power Commission for the issuance of the securities sold during the past year to refund its outstanding funded

Engineers' Exhibit No. 37-D (Cont'd)

debt as more fully described below under "Refunding Operations". Up to the present time the only additional requirement of the Commission under this Title which is likely to affect appreciably the subsidiaries of the Company is an order which required "public utilities" and "licensees" to adopt on January 1, 1937 a new System of Accounts promulgated by the Commission, with which order these subsidiaries are undertaking to comply. These subsidiaries have taken no action attacking the validity of this Title, and it has been their policy to comply fully with the requirements of the Federal Power Commission under this Title so long as such requirements do not encroach upon their constitutional rights.

El Paso Natural Gas Company

For several years Engineers Public Service Company had held two options to purchase common stock of El Paso Natural Gas Company. These options were obtained as part consideration for the investment by the Company of $3,500,000 in bonds of a subsidiary of that company to assist in financing an extension of its system. The first of these options covered 92,119 shares of outstanding common stock which had been deposited in escrow, equivalent to about 95% of the common shares then outstanding, and the second option covered 100,000 authorized but unissued shares. In connection with an adjustment of the debt of the Gas Company in 1933 to enable the financing of its Tuscon-Phoenix extension, lower option prices were obtained and a 20% participation in the options was granted to another holder of bonds.

These options provided that should El Paso Natural Gas Company be able and decide to refund the bonds owned by the Company, the Gas Company could give notice terminating these options in thirty days. Such notice was given to the Company on March 19, 1936. Greatly improved

Engineers' Exhibit No. 37-D (Cont'd)

earnings and prospects of El Paso Natural Gas Company obviously made it desirable for the Company to take some action before the expiration of the options. Accordingly arrangements were effected whereby 57,119 shares of the escrowed stock were taken up at $25 per share under the first option with funds provided by the Company and it became entitled to receive the net proceeds realized upon the ultimate disposition thereof. For $125,760 the Company assigned to persons active in the management and financing of El Paso Natural Gas Company the right to buy 16,576 shares not covered by the participation previously granted. As it was not considered advisable to exercise the second option on the unissued shares, that option was cancelled.

Early in June 1936, El Paso Natural Gas Company refunded its entire outstanding funded debt, including that of its said subsidiary, through the issue and sale of $7,500,000 principal amount of 15-year 4½% bonds and $3,750,000 principal amount of 10-year 4¾% convertible debentures. As a result of this refunding operation, Engineers Public Service Company was repaid its original investment.

Early in September, each common share without par value of El Paso Natural Gas Company was changed into three shares of the par value of $3 each. Later that same month 60,000 of the 171,357 new common shares received in exchange for old common stock purchased under the option were sold to an underwriting syndicate at $19 per share, which shares in turn were sold by the syndicate at public offering at $20 per share. The Company is entitled to the net proceeds, when the same are sold, of the remaining 111,357 new common shares, equivalent to about 20% of the common shares of El Paso Natural Gas Company outstanding at the end of the year.

Engineers' Exhibit No. 37-D (Cont'd)

Pages 9-10:

Ownership and Voting Power

Over 91.5% of the common stock of Engineers Public Service Company is owned by Stone & Webster, Incorporated. The charter of the Company provides that the preferred stock shall be non-voting except in statutory proceedings as to which the vote thereof is at the time required by law and except that in case at any time the Company shall fail to pay or set aside for payment eight succeeding quarterly dividends, the holders of the preferred stock shall thereupon have the continuing right to elect one less than a majority of the Board of Directors until all accrued dividends shall have been fully paid. By reason of the fact the Company had failed to pay or set aside for payment eight succeeding quarterly dividends on the preferred stock, the holders of said stock, at the annual meeting of the stockholders of the Company in May 1936, elected seven of the fifteen members comprising the Board of Directors.

Service Arrangements with Affiliates

Engineers Public Service Company (Delaware) and its subsidiaries, directly or through a mutual service organization, Engineers Public Service Company, Inc. (N. Y.), have certain service arrangements with Stone & Webster, Incorporated and with certain of that company's subsidiaries, which arrangements are reviewed hereafter.

The mutual service organization is wholly owned by the operating subsidiaries of Engineers Public Service Company and affords these subsidiaries the economies of group operation with respect to certain facilities and services which, through centralized handling, enable savings in expenses and more effective service. These services are furnished on a non-profit basis. The services obtained by the mutual service organization from Stone & Webster, Incorporated and from certain of that company's subsidi-

aries are obtained substantially on a non-profit basis. The cost of all services furnished to the operating subsidiaries is allocated proportionately among them on the basis of their respective gross earnings. In 1936 the aggregate of these charges was $303,293, equivalent to six-tenths of one per cent of combined gross earnings. (1935—$286,528). The mutual service organization also furnishes certain services to the holding companies in the Engineers group on a non-profit basis. The fees for such services in 1936 amounted to $70,800 (1935—$67,300), of which Engineers Public Service Company (Delaware) paid $65,000 (1935—$61,500). A comparative statement showing charges made to the companies served is set forth on page 30.

Each of the principal operating subsidiaries has a so-called "term contract" with Stone & Webster Engineering Corporation under which it is furnished, when it so directs, consulting engineering and construction service. The fees specified for consulting engineering services, which are on an approximate cost basis, are two-thirds of the per diem rates regularly charged by that corporation. The fees for construction work are on a percentage basis and are slightly lower than that corporation's regular fee schedules to clients not having a term contract with it. In 1936 these subsidiaries paid $17,813 (1935—$24,762) to the Engineering Corporation for consulting engineering services under these contracts. Fees for construction work during 1936 were $184,524 ($1935—$10,318).

The Company employs Stone & Webster Service Corporation as its stock Transfer Agent in Boston, Massachusetts, paying fees in substantial conformity with the customary charges made for similar services by other Boston transfer agents. In 1936 the Company paid $8,489 (1935—$6,844) to the Service Corporation for this transfer work and related services. A number of the subsidiaries also employ the Service Corporation as Transfer Agent and in 1936 these subsidiaries paid $23,867 (1935—$24,318)

Engineers' Exhibit No. 37-D (Cont'd)

to the Service Corporation for this service. There are no formal contracts covering these arrangements.

Certain of the operating subsidiary companies employ Stone & Webster Service Corporation to make examinations of the methods and details of accounting practice as well as of the efficiency of the accounting personnel. There are also no formal contracts covering these arrangements and the work is done substantially at cost. In 1936 the Service Corporation was paid $25,983 (1935—$21,549) for these services. This work is in addition to the examination and certification of the accounts of these subsidiaries by Lybrand, Ross Bros. & Montgomery, independent public accountants.

Practically all of the securities sold by the Company, or by its subsidiaries since they have had this status, have been sold through investment banking groups which included Stone & Webster and Blodget, Incorporated or its predecessors. Neither the Company nor any of its subsidiaries has a contract with that affiliate for financing service. During 1936 Gulf States Utilities Company sold $17,300,000 principal amount of 4% bonds and $4,000,000 principal amount of 4½% debentures to an underwriting group, receiving 100¾% and 100½% of the principal amounts, respectively, for these securities. The underwriting group in turn offered these securities to the public at 103% and 102½% of the principal amounts, respectively. Stone & Webster and Blodget, Incorporated was a member of this underwriting group, underwriting $3,705,000 principal amount of the bonds and $860,000 principal amount of the debentures.

Stone & Webster and Blodget, Incorporated also participated to the extent of 12,000 shares in the syndicate which sold the 60,000 shares of El Paso Natural Gas Company common stock as described on page 7.

Engineers' Exhibit No. 37-D (Cont'd)

Pages 11-12:

Puget Sound Power & Light Company

Gross earnings increased $1,306,362 or 9.4% over 1935 due to improved business conditions. Electric department revenues increased $1,085,753 or 9.5%, the largest gain being in industrial sales. Transportation revenues exceeded those of 1935 by $227,205 or 14.7%. Total operating expenses for the year increased $537,155 or 8.7% due principally to higher wage costs and to increased steam generation by reason of unfavorable water conditions at the hydroelectric plants.

Construction of the Federal projects at Grand Coulee and Bonneville on the Columbia River is proceeding although funds to complete the former have not been appropriated, and no definite arrangements have yet been made for the marketing of the power to be produced. At the last general election, of the thirteen counties in the company's territory where the matter was an issue, nine voted to form county-wide power districts. The proposal to amend the constitution so that the State could engage in the power business was defeated. The proposal to form a public power district in King County outside of Seattle has been delayed by action of the State Supreme Court and will not come before the electorate until the general election in November, 1938. City officials are studying further the proposed acquisition of the company's property in Seattle to eliminate competition with the municipal plant. At an election on March 9, 1937 a plan for refinancing and rehabilitating the Seattle Municipal Street Railway system was defeated by a vote of 53,501 to 39,069. This plan included the refunding at a substantial discount of the Municipal Street Railway bonds owned by the company.

In December 1936 the capital represented by the common stock of the company without par value was reduced from $24,805,995 to $14,000,000 without any change in the number of shares outstanding.

Contingent Liability:

Agreement, jointly and severally with Eastern Texas Electric Company (Del.), to indemnify a surety company against all losses and expenses it might incur as guarantor of the payment, on various maturity dates between 1937 and 1948, inclusive, of $340,000 principal amount of municipal bonds assumed by The Western Public Service Company, with interest thereon, until paid; and to guarantee payment of the annual premiums of the surety company.

* Decrease.

(a) Investments in subsidiary companies are carried at an amount based on the stated value of securities of the Parent Company issued, and cash paid, to acquire stocks of subsidiaries and an amount of $5,263,498 arising from revaluation.

(b) Represented by 111,357 shares of common stock of El Paso Natural Gas Company held by Trustee under Declaration of Trust. The quoted market price on December 31, 1936 when applied to such shares indicates an amount of approximately $3,000,000.

(c) See page 24 for detail.

(Notes Continued on Following Page)

Engineers' Exhibit No. 37-D (Cont'd)

(d) Represented by 158,080 shares $5 (Cumulative) Dividend Convertible Preferred, 196,934 shares $5.50 Cumulative Dividend Preferred and 75,000 shares $6 Cumulative Dividend Preferred, of no par value (entitled to $110 per share upon redemption or voluntary liquidation, or $100 per share upon involuntary liquidation, plus accrued dividends, except that after June 30, 1938 the $5 Preferred is entitled to $105 per share upon redemption or voluntary liquidation). Total Preferred Stock authorized 431,000 shares.

(e) Represented by 1,909,968 shares of $1 par value (1935—1,909,968 shares of no par value). Authorized 2,349,000 shares. (See footnote).

(f) Capital Surplus arising from the reduction of capital represented by Common Stock, as authorized at a meeting of the stockholders held May 18, 1936. The stockholders also authorized the reclassification of the Common Stock from no par to a par value of $1 per share.

(g) Before provision for cumulative dividends not declared, including those normally payable on:

	Jan. 1, 1937	Jan. 1, 1936
$5 (Cumulative) Dividend Convertible Preferred, $7.50 (1936—$12.50) per share	$1,185,600.00	$1,976,000.00
$5.50 Cumulative Dividend Preferred, $8.25 (1936—$13.75) per share	1,624,705.50	2,707,842.50
$6 Cumulative Dividend Preferred, $9.00 (1936—$15.00) per share	675,000.00	1,125,000.00
	$3,485,305.50	$5,808,842.50

NOTE: There are outstanding Common Stock Purchase Warrants, which were originally issued attached to certificates for the $5.50 Cumulative Dividend Preferred Stock, to purchase 196,934 shares of Common Stock at $68 per share on or before November 1, 1938. The 158,080 shares of $5 (Cumulative) Dividend Convertible Preferred Stock are convertible at option of holders up to June 30, 1938 into one and one-half shares of Common Stock for each share of Preferred.

See page 25 for detailed Statement of Capitalization.

Page 5-7:

ENGINEERS PUBLIC SERVICE COMPANY

Wilmington, Delaware.

March 30, 1938.

TO THE STOCKHOLDERS:

Engineers Public Service Company is a public utility holding company whose income is derived primarily from dividends and interest on securities owned. It received total income of $2,976,522 in 1937 as compared with $2,763,564 in 1936. After deduction of expenses, taxes and interest, there remained a balance available for dividends and surplus of $2,741,670, which amount was $418,133 in excess of the annual preferred dividend requirements of $2,323,537. In 1936 the corresponding balance for dividends and surplus was $2,537,891. The above figures for 1937 do not include credits to earned surplus as follows: a net profit of $830,843 realized from the sale of 60,000 shares of common stock of El Paso Natural Gas Company, and a net profit of $104,080 from the liquidation of Ponce Electric Company, a former subsidiary, following the sale of its property.

The combined operating revenues of subsidiary companies for 1937, as shown in the combined income statement on page 16, were $52,456,910, an increase of $4,333,352 or 9.0% over 1936. On January 1, 1937 the major subsidiary companies adopted the Federal Power Commission System of Accounts and certain others made changes in their accounting procedure to conform more nearly with this classification, with the result that certain items in the income statement are not exactly comparable with the previous year's figures. This is more fully explained on page 7. However, the balance after operating expenses, taxes and

Engineers' Exhibit No. 37-E (Cont'd)

non-operating income—net is substantially comparable. This balance was $21,616,195 in 1937, an increase of $733,137 or 3.5% over the previous year. Substantial increases in wages, cost of fuel and materials, and taxes prevented the larger gain in this balance which would otherwise have been expected from the gain in operating revenues.

Two of the subsidiary companies, Puget Sound Power & Light Company and The Key West Electric Company, failed to earn their full preferred dividend requirements for the year 1937 and reported deficiencies for their common shares of which $361,451 was applicable to the shares owned by Engineers Public Service Company. Although this deficiency is not a claim against the Engineers Company, it reduces the consolidated earnings. All other subsidiaries earned their preferred dividend requirements and in addition had balances for their common shares of which $4,066,618 was applicable to shares owned by the Engineers Company. The consolidated balance applicable to the stocks of the Engineers Company is arrived at by adding to this balance of $4,066,618, the income which the Company receives from notes and preferred stocks owned and from dividends on El Paso Natural Gas Company common stock, and by deducting from this total its expenses, taxes and interest, and the deficiency of earnings, after inter-company eliminations, of the two subsidiaries hereinbefore mentioned. The consolidated balance so produced was $3,768,777 in 1937 as compared with $2,946,392 in 1936. The complete income statement which appears on pages 16 and 17 is further supported by the tabulation on page 21 showing the contribution by each subsidiary to the consolidated balance.

In addition to the two subsidiaries which failed to earn their full preferred dividend requirements in 1937, a third, The Western Public Service Company, had cumulative preferred dividends in arrears at the end of the year. The total cumulative preferred dividends not declared on shares

of these three subsidiaries held by the public amounted to $10,436,070 at the end of the year of which amount $10,372,840 was not declared by Puget Sound Power & Light Company.

Preferred Dividends

During the year dividends aggregating two and a half years' dividend requirements were declared as follows: A dividend of 75% of a full year's requirement was declared payable April 1 to stockholders of record March 10; a dividend of 25% of a full year's requirement was declared payable July 1 to stockholders of record June 15; a dividend of 75% of a full year's requirement was declared payable October 1 to stockholders of record September 20, and a dividend of 75% of a full year's requirement was declared payable January 3, 1938 to stockholders of record December 10, 1937. The dividend paid on January 3, 1938 included the regular quarterly payment due at that time and there are now no dividends in arrears on the preferred stock.

Ownership of Common Stock

On December 27, 1937 Stone & Webster, Incorporated distributed to its stockholders substantially all of its 91% interest in the common stock of the Company, which it had owned for more than seven years. In connection with this distribution, changes in personnel were effected in order that there no longer would be directors and officers common to both the Company and Stone & Webster, Incorporated. The present Directors and officers are shown on page 4 of this report.

Public Utility Act of 1935

The Directors of Engineers Public Service Company authorized the registration of the Company as a public utility holding company under the Public Utility Holding

Engineers' Exhibit No. 37-E (Cont'd)

Company Act of 1935, which registration was effected on February 21, 1938. The two public utility holding company subsidiaries of the Company, El Paso Electric Company (Delaware) and The Western Public Service Company, also registered on February 21, 1938, pursuant to authorization of the Boards of Directors of the respective companies. In making these registrations, the Company and the two holding company subsidiaries reserved their constitutional rights for protection against any action taken in the future under the Act which might encroach on such constitutional rights and cause serious damage to these companies and their security holders. The above action was taken by the Company because it was deemed desirable to proceed without further delay with the consolidation of the properties of Gulf States Utilities Company, Baton Rouge Electric Company and Louisiana Steam Generating Corporation, and counsel had advised that such action should not be taken until after registration as a public utility holding company. The proposed consolidation of properties is referred to in more detail below under "Simplification of Corporate Structure".

The United States Supreme Court, on March 28, 1938, upheld the provisions of the Act requiring the registration of all public utility holding companies.

Engineers Public Service Company, Inc., the mutual service organization whose operations are outlined on page 9, has filed an application with the Securities and Exchange Commission for approval of the continuance of substantially its present service arrangements. It has operated as a mutual service organization since May 1, 1931.

Simplification of Corporate Structure

In February 1926 the Engineers Company acquired a controlling interest in Eastern Texas Electric Company (Delaware) and at December 31, 1937 owned 97.8% of its

Engineers' Exhibit No. 37-E (Cont'd)

common stock. That company was a holding company controlling the present properties of Gulf States Utilities Company and The Western Public Service Company. Since the continuance of this holding company was no longer required, arrangements were completed for its dissolution and on February 9, 1938 the common stock of Gulf States Utilities Company and the common stock and certain other securities of The Western Public Service Company were transferred to Engineers Public Service Company. The minority common stockholders of Eastern Texas Electric Company received $46 in cash per share for their holdings in accordance with the Plan of Liquidation. The removal of this intermediate holding company is in accordance with the purposes of the Public Utility Holding Company Act of 1935.

To simplify further its corporate structure Engineers Public Service Company has taken steps to consolidate the properties of its three subsidiaries operating in the Gulf Coast area, namely, Gulf States Utilities Company, Baton Rouge Electric Company and Louisiana Steam Generating Corporation. Applications were filed with the Securities and Exchange Commission and the Federal Power Commission on February 25, 1938 requesting their approval of the consolidation. All of the common stocks of these companies are now owned by the Company. A substantial program of construction is under way for each of these companies. The proposed consolidation would result in the formation of a stronger financial unit, thereby facilitating the raising of funds for present and future construction requirements, and would permit economies in operation. A reduction in rates is contemplated in connection with the consolidation in anticipation of such economies. Since Gulf States Utilities Company, which would be the corporation that continued its existence through the consolidation, does not have and cannot obtain the charter right to engage in a transportation business, it is planned to transfer the bus

property of Baton Rouge Electric Company to a new corporation which would be organized to continue this operation. This new corporation would be a direct subsidiary of the Engineers Company. In connection with the above consolidation it is proposed that the charter of Gulf States Utilities Company be amended so as to give the preferred stockholders one vote per share for election of directors and for all other purposes. The special voting rights now held by them would not be disturbed.

El Paso Natural Gas Company

At the beginning of 1937 the Company owned the beneficial interest in 111,357 common shares of El Paso Natural Gas Company held by a Trustee for liquidation. In August the Trustee received an offer to purchase 60,000 shares of this stock at $25 per share; the Engineers Company assented to this proposal and the stock was sold. After deducting Federal income tax and expenses, this sale resulted in a net profit on these shares of $830,843 which was credited direct to earned surplus. A similar transaction in 1936 with a net profit of $609,460 was recorded in the same manner. The Company continues to own the beneficial interest in 51,357 common shares which represents less than 9% of the total common shares of El Paso Natural Gas Company outstanding at the end of the year.

Pages 11-12:

Puget Sound Power & Light Company

Total operating revenues increased $1,711,287 or 11.4%. Electric revenues, which constituted approximately 85% of the total, increased $1,594,689 or 12.8%, inclusive of $735,062 of non-recurring sales to another utility. Transportation revenues exceeded those of 1936 by 3.1%. Pay roll increased approximately $450,000 due principally to wage increases in accordance with labor agreements, and

Engineers' Exhibit No. 37-E (Cont'd)

the cost of fuel for steam power generation increased $441,000 of which a substantial part was to furnish power for the above mentioned sales to another utility. The default of interest accruing from March 1, 1937 on Seattle Municipal Street Railway Bonds reduced non-operating income—net by $347,333 compared with the previous year.

Plans have been announced by Mr. J. D. Ross, administrator of the Bonneville project who is on leave of absence as Superintendent of Seattle City Light Department, to construct transmission lines and sell the power output of the Bonneville plant. The initial installation of 86,400 kilowatts is expected to begin generating power in May 1938. The Federal Power Commission, in accordance with an Act of Congress, divided the total cost of this project between power production, navigation and other uses, and allocated to power production less than one quarter of the cost of the initial project. Power rates will be based on 3½% interest on this allocation and its amortization over forty years. During January 1938 a contract was let for completion of the high dam at Grand Coulee and the construction of the west bay power house structure. It is stated that the dam is to be completed in 1942 and that the ultimate project will have a total generating capacity, including that for irrigation purposes, of approximately two million kilowatts. The project contemplates eventually the irrigation of a million acres of land.

During the year several public power districts set up or enlarged their staff organizations and started levying taxes to maintain them. Plans are being made to acquire the portions of the privately owned systems located in these districts but the company has received no definite proposals from any district for the sale of any of its property. The question of establishing a public power district for King County outside Seattle and also a county-wide district for Kitsap County will be voted on at the general election in November 1938.

Engineers' Exhibit No. 37-E (Cont'd)

During the year the company entered into an agreement with Seattle City Light for the interchange of surplus and emergency power for the mutual advantage of both systems. A 30,000 kilovatt interconnection has been constructed and was put in operation under this agreement early in 1938.

The Department of Public Service has issued an order, effective July 1, 1938, requiring that the company discontinue certain metering and billing practices arising from competition with the City Light System for business in Seattle. The City of Seattle adopted an ordinance stating that the City's municipal plant would adopt as a policy the same regulations as were ordered for the company. In further reference to the default of interest payments on the $8,336,000 of municipal railway bonds held by the company, suit has been entered by the company asking for a declaratory judgment by the court as to the priority of payment of bond principal and interest over operating costs of the railway. The City has filed a motion to dismiss the company's suit. The company has also filed claims with the City Comptroller for interest due September 1, 1937 and for principal and interest due March 1, 1938. This action is in compliance with the City charter preliminary to a suit in tort to hold the City generally liable for failure to impound street railway revenues. The City is attempting to develop a new financial plan for rehabilitating the municipal street railway and retiring the bonds held by the company.

Contingent Liability:

Agreement, jointly and severally with Eastern Texas Electric Company (Del.), to indemnify a surety company against all losses and expenses it might incur as guarantor of the payment, on various maturity dates between 1938 and 1948, inclusive, of $329,000 principal amount of municipal bonds assumed by The Western Public Service Company, with interest thereon until paid; and to guarantee payment of the annual premiums to the surety company.

*Decrease.

(a) Investments in subsidiary companies are carried at an amount based on the stated value of securities of the Parent Company issued, and cash paid, to acquire stocks of subsidiaries and an amount of $5,263,498 arising from revaluation.

(b) Represented by 51,357 shares of common stock of El Paso Natural Gas Company held by Trustee under Declaration of Trust. The quoted market price on December 31, 1937 when applied to such shares indicates an amount of approximately $911,500.

(c) See page 24 for detail.

(d) Represented by 158,080 shares $5 (Cumulative) Dividend Convertible Preferred, 196,934 shares $5.50 Cumulative Dividend Preferred and 75,000 shares $6 Cumulative Dividend Preferred, of no par value (entitled to $110 per share upon redemption or voluntary liquidation, or $100 per share upon involuntary liquidation, plus accrued dividends, except that after June 30, 1938 the $5 Preferred is entitled to $105 per share upon redemption or voluntary liquidation). Total Preferred Stock authorized 431,000 shares.

(e) Represented by 1,909,968 shares of $1 par value. Authorized 2,349,000 shares. (See Note.)

(f) Before provision for cumulative dividends on Preferred Stock in arrears and not declared, $3,485,305.50.

NOTE: There are outstanding Common Stock Purchase Warrants, which were originally issued attached to certificates for the $5.50 Cumulative Dividend Preferred Stock, to purchase 196,934 shares of Common Stock at $68 per share on or before November 1, 1938. The 158,080 shares of $5 (Cumulative) Dividend Convertible Preferred Stock are convertible at option of holders up to June 30, 1938 into one and one-half shares of Common Stock for each share of Preferred.

See page 25 for detailed statement of capitalization.

Pages 5-7:

ENGINEERS PUBLIC SERVICE COMPANY

Wilmington, Delaware.

March 29, 1939.

To the Stockholders:

Engineers Public Service Company is a public utility holding company whose income is derived from dividends and interest on securities. Gross Revenues were $3,226,755 in 1938 as compared to $2,976,522 in 1937. After deducting all charges and annual preferred dividend requirements of $2,323,537, there remained a balance for common stock of $645,229 in 1938 as compared to $418,133 in 1937.

The combined operating revenues of subsidiary companies for 1938 as shown in the combined income statement on page 18 were $52,715,815, an increase of $258,905 over 1937, although revenues from nonrecurring sales to another utility in the amount of $735,062 were included in the previous year. The balance after operating expenses, taxes and non-operating income—net was $22,098,806 in 1938, an increase of $482,611 over the previous year. Substantial increases in wages and in certain taxes were in the aggregate more than offset by reductions in power production expenses and in income taxes due to nonrecurring tax deductions in connection with refinancing.

One subsidiary, Puget Sound Power & Light Company, failed to earn full preferred dividend requirements in 1938, and of the deficiency reported for its common shares, $602,086 was applicable to the shares owned by Engineers Public Service Company. Although this deficiency is not a claim against the Engineers Company or its other subsidiaries, it has been deducted, under the method of reporting consolidated income followed by the Company up to

Engineers' Exhibit No. 37-F (Cont'd)

December 31, 1938, to arrive at the balance applicable to the stocks of Engineers Public Service Company. The consolidated balance for common stock so produced, after deducting in each case preferred dividend requirements of Engineers of $2,323,537, was $1,549,420 or 81 cents per share of common stock in 1938 as compared with $1,445,240 or 76 cents per share of common stock in 1937. If the amount of the deficiency in earnings for the common stock of the Puget Sound subsidiary owned by the Engineers Company had not been deducted in each year, the corresponding balances would have been $2,151,506 or $1.13 per share of common stock in 1938 as compared with $1,805,115 or 95 cents per share of common stock in 1937.

The Company has made certain adjustments in its balance sheet as described more fully hereafter under "Adjustment of Balance Sheet," which included the creation of a reserve for depreciation in investments in subsidiaries, embodying a substantial allowance for the Company's investment in the common stock of Puget Sound Power & Light Company. Since this reserve has provided for a considerable period in advance for losses which may be sustained because of the accrual of unearned cumulative dividends on the preferred stocks of the Puget Sound subsidiary held by the public, it is unnecessary to deduct from current consolidated income the amount of the deficiency in earnings of this subsidiary. Accordingly, beginning with the January 1939 monthly report, the consolidated balance for the 12 months' period then ended applicable to stocks of Engineers Public Service Company is being set forth without deduction for such deficiency.

In addition to Puget Sound Power & Light Company, two other subsidiary companies, The Western Public Service Company and The Key West Electric Company, had cumulative preferred dividends in arrears at the end of the year. The total cumulative preferred dividends not declared on shares of these three subsidiaries, held by the

public, amounted to $12,584,434 at the end of the year, of which amount $12,506,810 pertains to Puget Sound Power & Light Company.

The complete combined income statement which appears on pages 18 and 19 is further supported by the tabulation on page 25 showing the contribution by each subsidiary to the consolidated balance.

Adjustment of Balance Sheet

As of May 31, 1938 the Directors of the Company authorized certain adjustments in the balance sheet, as follows:

(1) A write-down of $6,763,498 in investments in subsidiary companies by charging earned surplus to the full extent of such surplus at that time (after charging to it the quarterly dividend on the preferred stock normally declared in the month of May and paid July 1, 1938) and by charging capital surplus with the balance. The purpose of this entry was to reduce the book value of such investments to the cost to the Company of the securities held;

(2) An increase of $1,925,767 in the preferred stock capital account raising it to the amount payable on the preferred stock in the event of involuntary liquidation, namely at the rate of $100 per share, by transferring such amount from capital surplus. Prior to that date this stock had been carried on the books at the amount received therefor;

(3) The creation of a $35,000,000 reserve for depreciation in investments in subsidiaries by a transfer from capital surplus in this amount. This reserve was established to provide for losses which the Directors believed to have accrued at that date

although such losses had not yet been taken. The principal factors causing the depreciation against which this reserve was provided, were reduced net earnings brought about largely by increased taxes, existing competition and the announced intention of certain power districts and other public authorities either to purchase or condemn certain properties of subsidiaries of the Company or to compete with such subsidiaries. These factors are largely covered in subsequent sections of this letter.

Thus at May 31, 1938 the Company had no earned surplus and the earned surplus of subsidiaries at that date also became unavailable to it to rebuild this account since dividends from subsidiaries declared subsequent to May 31, 1938 may be credited to the Company's earned surplus only to the extent that such dividends were earned subsequent to that date. Neither the properties owned nor their earning power were altered by these adjustments.

Dividends

After the payment on January 3, 1938 of three-fourths of a full year's preferred dividend requirements, there remained no dividends in arrears on the preferred stock. Regular quarterly preferred dividends have been paid subsequent to that date. In view of the conditions existing after the above described adjustment of the balance sheet, it is clearly desirable to accumulate additional earned surplus before consideration is given to a dividend on the common stock of the Company.

* * * * * * *

Preferred Stock Tenders

On March 1, 1939, having obtained authorization from the Securities and Exchange Commission, the Company

addressed a letter to all of its preferred stockholders stating that sealed tenders would be received up to March 29, 1939 for the sale to it of a total of not exceeding 7,000 shares of its preferred stock of any or all series. It was further stated that if the Board of Directors accepted any tenders, they would accept the lowest offers, taking into consideration the differences in yield of the three series. On the latter date the Board of Directors accepted tenders for a total of 7,000 shares of preferred stock at a total cost of $548,536 as follows; 1,817 shares of $6 Dividend Preferred Stock at an average price of $85.22 per share; 3,138 shares of $5.50 Dividend Preferred Stock at an average price of $78.76 per share, and 2,045 shares of $5 Dividend Preferred Stock at an average price of $71.65 per share. The total reduction in annual preferred dividend requirements effected thereby is $38,386.

El Paso Natural Gas Company

The Company continues to own the beneficial interest in 51,357 shares of common stock of El Paso Natural Gas Company, which shares represent less than 9% of the total common stock of that company. Other than this, the Engineers Company has no investment outside of its own subsidiaries. A dividend of $2 per share was paid on this stock in 1938, and also in 1937. The earnings per share were $3.29 and $3.00, respectively, for these two years.

Public Utility Act of 1935

As stated in the 1937 Annual Report, the Company and its public utility holding company subsidiaries registered under this Act in February 1938. Subsequently the Securities and Exchange Commission addressed a letter to the major holding companies, including the Company, requesting them to furnish tentative plans of compliance with Section 11 of the Act, which section contains provisions for the simplification of holding company systems and limi-

Engineers' Exhibit No. 37-F (Cont'd)

tations with respect to the properties which may be included therein. The Company submitted to the Commission an answer to this request which, because of its tentative nature, has not been made public. It is impossible at this time to determine the ultimate effect of the Act on the Company and its subsidiaries or their security holders.

Engineers Public Service Company, Inc., the mutual service organization, has, since 1931, furnished certain services and facilities on a non-profit basis to the companies in the Engineers group, all as more fully described on page 10. That company recently obtained the approval of the Securities and Exchange Commission, as required in the Act, for these service arrangements, with certain modifications in the method of allocating costs.

Simplification of Corporate Structure

As recorded in the 1937 Annual Report, Eastern Texas Electric Company (Delaware), an intermediate holding company, was liquidated and dissolved in February 1938. Also the plan for consolidating the properties of Baton Rouge Electric Company and Louisiana Steam Generating Corporation with those of Gulf States Utilities Company was consummated on August 25, 1938 in substantially the form outlined in that report. The bus properties of Baton Rouge Electric Company, which could not be acquired by Gulf States Utilities Company because of charter limitations, were acquired by Baton Rouge Bus Company, Inc., a subsidiary of the Engineers Company, which had been formed for the purpose. The corporate chart on page 73 sets forth the present corporate relationship of the companies in the Engineers system.

Pages 11-12:

Puget Sound Power & Light Company

General business conditions in 1938 were less favorable than in 1937. Electric revenues, which constitute 84.5% of the total, decreased $711,929 or 5.1%, however, after elim-

Engineers' Exhibit No. 37-F (Cont'd).

inating the $735,062 of nonrecurring power sales to another utility in 1937, these revenues showed a slight increase. Transportation revenues decreased $183,660 or 10.0%, nearly half of which was due to a change in revenue classification which did not affect net income. Total operating revenues decreased $924,965 or 5.5%, and operating expenses decreased $763,537 or 10.4% principally due to less steam power generation.

With the sale of the street railway business in Bellingham in November 1938 and the discontinuance in February 1939 of the Seattle-Everett interurban, neither the company nor any subsidiary conducts any street or interurban railway operations.

The Seattle Electric Company, Seattle-Everett Traction Company Bonds in the amount of $1,218,000 were paid at maturity on March 1, 1939. In addition there are maturities of $2,919,500 on February 1, 1940 and $3,990,000 on March 1, 1940. No dividends were paid during the year because of the necessity to conserve cash to meet these maturities.

On September 1, 1937 the City of Seattle defaulted with respect to semi-annual interest due on that date on the Municipal Street Railway Bonds held by the company. The suit instituted by the company in this connection has been continued from time to time pending the outcome of the Ctiy's efforts to develop a complete refinancing and rehabilitation program for the street railway system. On January 26, 1939 the Reconstruction Finance Corporation authorized a loan to the street railway of $10,200,000 of which not more than $4,500,000 may be used to retire the present debt of the system. In view of the circumstances surrounding this situation, the company has agreed to accept a minimum of $3,250,000 for the $8,336,000 principal amount of bonds and accrued interest and 80 cents on the dollar for $125,588 of street railway warrants, owned by it.

Agitation continued throughout the year for acquisition by public utility districts of all or part of the company's

Engineers' Exhibit No. 37-F (Cont'd)

electric property. In the general election of November 8, 1938, in the territory served by the company, two counties voted in favor of establishing public utility districts and three counties, including King County outside of Seattle, voted against the formation of districts. In the 19 counties served in whole or in part by the company, public utility districts are authorized in 13 counties, however, only one district has actually progressed to the point where it is operating and rendering service. Two other districts have started condemnation proceedings to acquire the property of the company in their respective districts.

During the year, construction continued on the Grand Coulee project. The first installation of generating capacity totalling 361,500 kilowatts is estimated to be completed in 1942 if the necessary funds are provided. The entire project is estimated to cost $383,000,000. On July 9, 1938 the Federal Government's Bonneville electric plant, with a capacity of 86,400 kilowatts, was placed in operation. An additional installation of 120,000 kilowatts is under construction and $18,000,000 has been allotted for the construction of transmission lines to expected market centers.

In December 1938 the Seattle City Lighting Department's second Skagit transmission line, which cost approximately $5,000,000, was placed in operation. Construction is being continued on the Department's Ruby Dam with the aid of PWA funds.

During 1938 the company was granted new electric franchises in the cities of Olympia, Snohomish and Tenino, which expire in 1963, and a steam heat franchise in Seattle, which expires in 1952.

Page 13:

Mr. Howard Coonley, Chairman of the Board of Walworth Company, Incorporated, and Mr. Thomas W. Streeter, President of Prudence Bonds Corporation and a Director of several of the subsidiaries of Engineers Public Service Company, have been elected Directors of the Company.

(a) Excludes dividends of $202,762.63 received subsequent to May 31, 1938 on common stock of subsidiaires paid out of earnings of such subsidiaries accumulated prior to June 1, 1938, such dividends being credited to Capital Surplus. (See note (c) below).

(b) Excludes Federal income tax of $165,536.30 on transactions described in note (d) below.

(c) As of May 31, 1938 the Company reduced the book value of its investment in common stock of a subsidiary company to actual cost to the Parent Company. This reduction in the amount of $5,263,498.16 was charged to Earned Surplus, including net earnings for the year to May 31, 1938, and an amount of $3,220,750.49 was transferred from Capital Surplus to eliminate the deficit then existing in the Earned Surplus account.

(d) Represents net profit of $830,843.21 from sale of 60,000 shares of common stock of El Paso Natural Gas Company held by Trustee under Declaration of Trust and $112,883.84 net profit from liquidation of subsidiary companies, after deducting Federal income tax and expenses applicable thereto.

Engineers' Exhibit No. 37-F (Cont'd)

Contingent Liability:

Agreement to indemnify a surety company against all losses and expenses it might incur as guarantor of the payment, on various maturity dates between 1939 and 1948, inclusive, of $318,000 principal amount of municipal bonds assumed by The Western Public Service Company, with interest thereon until paid; and to guarantee payment of the annual premiums to the surety company.

(a) Investments in Subsidiary Companies are carried at an amount based on the stated value of securities of the Parent Company issued, and cash paid, to acquire securities of subsidiaries.

(b) As at May 31, 1938 Investments in Subsidiary Companies were written down by $6,763,498.16, Earned Surplus being charged to the extent thereof and the remainder to Capital Surplus; $1,925,767 was transferred from Capital Surplus to Preferred Stock; and $35,000,000 was transferred from Capital Surplus to Reserve for Depreciation in Investments.

(c) In January, 1938 these notes were surrendered for cancellation as a contribution to the capital of the subsidiary company and this amount was transferred to Investments in common stocks of subsidiary companies.

(d) Represented by 51,357 shares of common stock of El Paso Natural Gas Company held by Trustee under Declaration of Trust. The quoted market price on December 31, 1938 when applied to such shares indicates an amount of approximately $1,489,300.

(e) Represented by 158,080 shares $5 (Cumulative) Dividend Preferred, of no par value (entitled to $105 per share upon redemption or voluntary liquidation, or $100 per share upon involuntary liquidation, plus accrued dividends), 196,934 shares $5.50 Cumulative Dividend Preferred and 75,000 shares $6 Cumulative Dividend Preferred, of no par value (entitled to $110 per share upon redemption or voluntary liquidation, or $100 per share upon involuntary liquidation, plus accrued dividends). Total Preferred Stock authorized 431,000 shares. On May 31, 1938 each series of Preferred Stock was increased, from the amount paid in on such series to the amount to which it is entitled in involuntary liquidation, namely $100 per share, by transfers from Capital Surplus aggregating $1,925,767.

(f) Represented by 1,909,968 shares of $1 par value. Authorized 2,349,000 shares.

See Page 29 for detailed Statement of Capitalization.

(Continued on Page 19)

As of January 1, 1937, certain subsidiary companies adopted the systems of accounts prescribed by the Federal Power Commission and various state regulatory bodies. One of the requirements of these systems is that certain property studies be made for the purpose of determining the original cost of the companies' electric plant when first devoted to public service. The Federal Power Commission has granted to certain subsidiary companies an extension to July 1, 1939 for completion of these studies. The systems of accounts also require that the companies provide for depreciation on their depreciable electric plant to the extent of the loss in service value not restored by current maintenance. Pending completion of their property and depreciation requirements studies, the companies have continued to follow the retirement reserve method of providing for property retired from service. It cannot presently be foreseen what changes in the companies' accounting for property and provision for property retirements may be necessitated upon the completion of these studies, but they may be material.

*Decrease.

(a) See page 24 for detail.

(b) Includes $767,726.62 (1937—$1,028,789.95) Federal income taxes. See page 24 for detail of taxes.

(c) These amounts are substantially less than the depreciation deductions claimed or to be claimed on Federal income tax returns of the companies, which deductions are based on a straight-line method, and the resulting reserve is substantially less than a depreciation reserve would be if based on such straight-line method. In addition to the amounts shown, the companies have accrued $151,761.89 (1937—$160,998.19) for depreciation of automobiles and trucks and have assigned such depreciation to other accounts.

(d) See page 25 for detail.

Pages 5-6:

ENGINEERS PUBLIC SERVICE COMPANY

Wilmington, Delaware.

March 28, 1940.

TO THE STOCKHOLDERS:

Engineers Public Service Company is a public utility holding company deriving its income from dividends and interest on securities. Gross revenues were $3,716,891 in 1939 as compared with $3,226,755 in 1938. After deducting all charges and preferred dividends in each year, there remained a balance for common stock of $1,162,624, or 61¢ per share, in 1939 as compared with $645,210, or 34¢ per share, in 1938.

The combined operating revenues of the subsidiary companies, as shown on page 16, were $54,244,928 for 1939, an increase of $1,529,113, or 2.9%, over those for 1938. Expenses of operation and maintenance show a decrease of $671,232, or 2.8%. However, operations for the two years are not comparable in that the contract basis of furnishing steam to a large industrial customer of one subsidiary was changed on December 1, 1938 (see page 9). If operations for 1938 were adjusted to the 1939 basis in this respect, the gain in revenues for 1939 would be $2,858,000, or 5.6%, and operating expenses in 1939 would have increased $658,000, or 2.9%. Depreciation and taxes increased 6.4% and 10.9%, respectively. The balance for interest was $17,709,454 in 1939, a gain of $1,328,340 over 1938.

Each subsidiary company covered its full preferred dividend requirements for 1939. However, the earnings of Puget Sound Power & Light Company for its common stock are eliminated from the consolidated balance applicable to Engineers Public Service Company because of the large amount of accrued and unpaid preferred dividends

on stock held by the public standing ahead of the common stock of that company. The consolidated balance for the common stock of Engineers Public Service Company after all charges and preferred dividends was $2,961,755, or $1.55 per share, in 1939 compared with $2,151,487, or $1.13 per share, in 1938 on a comparable basis after excluding the results of operation of the Puget Sound company in each year.

Although each subsidiary company covered its preferred dividend requirements in 1939, three had preferred dividends in arrears at the end of the year, aggregating $14,727,539 on shares held by the public, of which amount $14,640,780 pertained to Puget Sound Power & Light Company. The complete combined income statement, which appears on pages 16 and 17, is further supported by the tabulation on page 23 showing the contribution by each subsidiary company to the combined balance applicable to the parent company.

Dividends

Regular quarterly dividends have been paid on the preferred stocks of the Engineers Company during the year and there are no such dividends in arrears. The stockholders are reminded of the adjustment of the Company's balance sheet as of May 31, 1938, which reduced the earned surplus to zero at that date. It is clearly desirable to accumulate additional earned surplus to improve the stability of the Company before consideration is given to a dividend on the common stock.

Public Utility Holding Company Act

The Company, as a registered public utility holding company under this Act, has received from the Securities and Exchange Commission an order requiring the filing of an answer, or a joint answer with its subsidiary companies, with respect to compliance with Section 11(b)(1) of the

Engineers' Exhibit No. 37-G (Cont'd)

Act. This section provides for the restriction of integrated systems and incidental businesses which a holding company may control. The order is a formal order phrased largely in the words of the statute and is issued by the Commission in accordance with the duty imposed upon it by Section 11 and does not indicate what the attitude of the Commission may be with respect to administering the section. The order appears to have for its purpose the defining of the issues involved and contemplates that the facts shall be developed at hearings to be held by the Commission or its staff. At the conclusion of such hearings, the Commission presumably will order appropriate action to be taken.

It is impossible at this time to determine the ultimate effect of the above proceeding on the Company and its subsidiaries or their security holders.

It has been the position of the Company in respect to this matter that it would cooperate fully with the Securities and Exchange Commission to the extent it can properly do so, so long as the substantial rights of its security holders are not infringed. For a long period of time the Company's subsidiaries have enjoyed the benefits of the financial support and prestige of the holding company. The building up of an unusually competent key personnel through special training and broad experience in several locations and the consistent maintenance of sound management policies through supervision by able central office executives, have proven valuable to the subsidiaries. Substantial economies have been realized through group operation of important services furnished at cost, such as cooperative use of experts in various fields and savings in the cost of materials through grouping of purchases. The excellent results which have been achieved by this method of operation are evidenced in the generally efficient and economical service furnished to customers and in the progress which has been made in reducing rates (see page 28). A major advantage to the Company's security holders arises from the geographical diversity of the properties, which consist pri-

marily of fully integrated systems located in eleven states (see map, page 69); temporarily poor earnings in one area are frequently offset by gains in other areas, so that the combination of revenues in the holding company system fluctuates less than those of individual companies.

El Paso Natural Gas Company

The Company continues to own the beneficial interest in 51,357 shares of common stock of El Paso Natural Gas Company, which shares represent less than 9% of the total common stock of that company. A dividend of $2.00 per share was paid on this stock in 1939 and also in 1938. The earnings per share were $3.74 and $3.29, respectively, for these two years. Other than this, the Engineers Company has no investment outside of its subsidiaries.

Page 8:

Service Arrangements with Engineers Public Service Company, Inc.

The operating subsidiaries of Engineers Public Service Company obtain economies and more efficient service through group operation of certain essential services including executive, advisory, financial, purchasing, sales promotion, insurance, accounting, statistical, tax and corporate. These services are furnished on a nonprofit basis by Engineers Public Service Company, Inc. (N. Y.), a mutual service organization wholly owned by the operating subsidiary companies of Engineers Public Service Company. The cost of all services furnished to the operating subsidiaries of the Engineers Company, after assigning certain charges directly, was allocated proportionately among them on the basis of their respective operating revenues. The total amounts billed are shown on page 31. In 1939 the aggregate of these charges billed to operating subsidiaries was $300,191 (1938—$313,382), equivalent to less than six-tenths of one per cent of the combined operat-

Engineers' Exhibit No. 37-G (Cont'd)

ing revenues. The mutual service organization also furnishes at estimated cost certain services to the parent company and to an intermediate holding company. The charge for such services in 1939 amounted to $72,009 (1938—$81,062), of which Engineers Public Service Company paid $66,589 (1938—$75,482).

Page 10:

Puget Sound Power & Light Company

General business conditions were materially improved, and industrial payrolls increased more than 30% over 1938. Total operating revenues increased $568,761, or 3.6%, over the previous year; an improvement of $647,416, or 4.9%, in electric revenues, which constitute 85.5% of total revenues, being partly offset by decreases in other departments. Effective September 1, 1939, rate reductions were made which were estimated to save customers nearly $730,000 annually. Expenses of operation and maintenance were approximately the same as in 1938. The company covered its current preferred dividend requirements for the first time in several years.

During the year the City of Seattle received a loan from the Reconstruction Finance Corporation and paid the company $3,250,000 as a final settlement for the $8,336,000 principal amount of municipal railway bonds and accrued interest thereon. The company also received $100,470 for $125,588 of street railway warrants which it owned. During 1939 the funded debt of the company was reduced by $5,441,500 through payments at maturity and acquisition of bonds for sinking fund requirements. On March 1, 1940, an additional maturity of $3,195,000 was met. The company has no funded debt maturities until 1949. A dividend of $1.25 per share, payable April 15, 1940, has been declared on the prior preference stock on account of arrears.

During 1939 four more Public Utility Districts started condemnation proceedings to acquire the company's prop-

erty (excluding production and transmission property) in their respective districts, thus bringing the total of such proceedings to six. Decrees of public use and necessity have been granted to four of these Districts and one case has been assigned for trial. Public Utility Districts are now authorized in 13 of the 19 counties served in whole or in part by the company. Of these Districts, five owned and operated small electric systems at the end of 1939, but, except in minor instances, these projects are not directly competitive, and two of them purchase their power requirements from the company.

Construction continued on the Grand Coulee project during the year and the initial generating installation of 349,000 kilowatts is expected to be completed in January 1942. The Bonneville project has under way the installation of four additional generating units with an aggregate capacity of 216,000 kilowatts, two of which are scheduled for operation in January 1941. During the year, the Bonneville Administration constructed transmission lines to connect proposed load centers, and further extensive line construction is scheduled. The Administration also made contracts for power with certain private and municipal electric utilities and with several large industrial corporations.

The first step in the construction of the Seattle City Light Department's Ross Dam which will have a storage capacity equivalent to over 40 million kilowatt hours, is scheduled for completion in March 1940 at a cost of about $6,000,000. When built to its ultimate height in 1948, the dam is estimated to cost $40,000,000.

Total deductions	2,294,783.00	7,587,054.05	5,292,271.05*
Earned surplus at end of year (since May 31, 1938)	$2,361,698.78	$1,171,579.72	$1,190,119.06

* Decrease.

† See page 23 for detail.

(a) Excludes dividends of $202,762.63 received subsequent to May 31, 1938 on common stock of subsidiaries paid out of earnings of such subsidiaries accumulated prior to June 1, 1938, such dividends being credited to capital surplus. (See note (c) below).

(b) Represents profit on $468,000 principal amount of bonds sold to a subsidiary company for retirement.

(c) As of May 31, 1938 the Company reduced the book amount of its investment in common stock of a subsidiary company to actual cost to the Parent Company. This reduction which amounted to $5,263,498.16 was charged to earned surplus and an amount of $3,220,750.49 was transferred from capital surplus to eliminate the deficit then existing in the earned surplus account.

Engineers' Exhibit No. 37-G (Cont'd)

Contingent liability:

Agreement to indemnify a surety company against all losses and expenses it might incur as guarantor of the payment, on various maturity dates between 1940 and 1948, inclusive, of $307,000 principal amount of municipal bonds assumed by The Western Public Service Company, with interest thereon until paid; and to guarantee payment of the annual premiums to the surety company.

---

* Decrease.

(a) Investments in subsidiary companies are carried at an amount based on the stated value of securities of the Parent Company issued, and cash paid, therefor.

(b) Represented by 51,357 shares of common stock of El Paso Natural Gas Company held by trustee under declaration of trust. The quoted market price on December 31, 1939 when applied to such shares indicates an amount of approximately $2,131,300.

(c) Represented by 156,001 shares (1938—158,080 shares) $5 (cumulative) dividend preferred, of no par value (entitled to $105 per share upon redemption or voluntary liquidation, or $100 per share upon involuntary liquidation, plus accrued dividends), 193,831 shares (1938—$196,934 shares) $5.50 cumulative dividends preferred and 73,183 shares (1938—75,000 shares) $6 cumulative dividend preferred, of no par value (entitled to $110 per share upon redemption or voluntary liquidation, or $100 per share upon involuntary liquidation, plus accrued dividends). Total preferred stock authorized 431,000 shares.

(d) Represented by 1,909,968 shares of $1 par value. Authorized 1,909,968 shares.

(e) Represents excess of book value over cost of 6,999 shares of the Company's preferred stock reacquired and cancelled.

See page 27 for detailed statement of capitalization.

There is pending before the Securities and Exchange Commission a proceeding, involving the Company and its subsidiaries, under Section 11 (b) (1) of the Public Utility Holding Company Act of 1935. This section provides for the restriction of integrated systems and incidental businesses which a holding company may control. It is impossible at this time to determine the ultimate effect of this proceeding on the Company and its subsidiaries and their security holders.

Pages 5-7:

ENGINEERS PUBLIC SERVICE COMPANY

Wilmington, Delaware,
April 3, 1941.

TO THE STOCKHOLDERS:

Earnings

Gross revenues of your Company (the parent company), which consist of interest and dividends on securities owned, were $3,715,059 in 1940, substantially the same as for the year 1939. Expenses of the Company increased, due largely to the cost of preparing information for presentation before the Securities and Exchange Commission in connection with Section 11 of the Public Utility Holding Company Act. The increase in taxes resulted from the rise in the federal income tax rate. Net income of the Company available for dividends and surplus in 1940 was $3,394,169 as compared with $3,457,407 in 1939. Dividends on the preferred stocks amounted to $2,285,192, leaving a balance for common stock and surplus of $1,108,977 equivalent to 58¢ a share, compared with $1,162,624 or 61¢ a share in 1939.

Earnings on a consolidated basis are given below, but the nature of a consolidated earnings statement should be borne in mind when considering earnings available to your Company. The difference between the balance of consolidated earnings and the parent company earnings represents amounts retained in the surpluses of the subsidiary companies and not declared out in the form of dividends to the parent company. Sound and prudent management requires, especially under present conditions, the retention of substantial surplus earnings in all subsidiary companies, particularly those having large cash requirements for construction. Three subsidiary companies have

bank loans maturing serially over periods from five to seven years, which are to be paid off out of earnings, thus requiring the retention of surplus for this purpose. The maturities currently aggregate $1,310,000 annually, which represents a substantial part of the consolidated earnings for the common stock and the amount will not be received by the holding company and thus not made available for its own dividends and surplus.

The combined operating revenues of the subsidiary companies in 1940 were $57,093,653, an increase of $2,848,725 over 1939. Half of this increase was absorbed by rises in taxes and an additional substantial amount by increased costs of operation, including payroll. The final balance applicable to the parent company common stock and surplus on a consolidated basis was $3,068,967, or $1.61 per share, compared with $2,961,755, or $1.55 per share, in 1939.

In the above consolidated figures the earnings of Puget Sound Power & Light Company are eliminated from the balance applicable to Engineers Public Service Company because of the provision made in the balance sheet for estimated loss in value of this investment including provision for a considerable period in advance for loss which may be sustained because of the accrual of unearned cumulative dividends on preferred stock of that company. All other subsidiary companies earned and paid their regular preferred dividends in 1940, although two of these companies now have preferred dividends in arrears which at the end of 1940 amounted in total to $86,758 with respect to stock held by the public. The complete combined income statement which appears on pages 18 and 19 is further supported by the tabulation on page 25 showing the contribution of each individual subsidiary company to the combined balance applicable to the parent company.

Dividends

Regular quarterly dividends have been paid on the preferred stocks of the Engineers Company during the year

and there are no preferred dividends in arrears. No dividends on the common stock of the Engineers Company have been paid during the year. The stockholders are reminded of the adjustment of the Company's balance sheet as of May 31, 1938, reducing the earned surplus to zero at that date and making a substantial charge to capital surplus, in order to set up a reserve of $35,000,000 for depreciation in the value of the investments. Accordingly there have been accumulations in the earned surplus of the parent company only since May 31, 1938. Also, as at December 31, 1940, approximately $2,010,000 of consolidated earned surplus is not available for the payment of dividends on common stock of certain subsidiaries due to covenants made by such companies restricting the payment of dividends on common stock. In view of the uncertainties, past and present, the Directors of your Company believe it has been in the interest of both the preferred and common stockholders to accumulate additional earned surplus and cash and thus improve the stability of the Company.

Public Utility Holding Company Act

In February 1940 the Company and its subsidiaries were cited to file an answer as to compliance with Section 11(b)(1) of the Public Utility Holding Company Act and such an answer was filed. The Company subsequently filed a motion to dismiss the proceedings which the Securities and Exchange Commission construed as a request to give its interpretation of the Section as applied to the Engineers system. On March 11, 1941, the Commission issued its statement of its tentative conclusions which are that the requirements of the geographical standards of the Section would be met with respect to the Engineers system if it disposed of all of its subsidiaries except Virginia Electric and Power Company and Savannah Electric and Power Company or, in the alternative, except Gulf States Utilities Company and El Paso Electric Company (Delaware) and, in the case of

Engineers' Exhibit No. 37-H (Cont'd)

the choice of either of these alternatives, it would be incumbent on the Company to prove that the other requirements of the Section were met as to the Savannah or El Paso companies, as the case may be. In connection with the statement, the Commission reconvened the hearing on March 25, 1941 at which time certain broad issues were discussed. Further hearings are scheduled to begin on April 8, 1941, at which hearings the Company expects to present evidence which it believes will show that the requirements of the Section, as construed by the Company, would be met if the Company continued to control the properties of Virginia Electric and Power Company, Gulf States Utilities Company and El Paso Electric Company (Delaware). There is the further question of the constitutionality of this Section. Until these matters have been determined, it is impossible to state what the ultimate effect of this action will be on the Company and its subsidiaries. Considerable work has been done by the Company and its subsidiaries preparatory to presenting their case before the Commission.

Your Company has repeatedly pointed out that its subsidiaries enjoy certain advantages not available to comparable independent companies. The financial support and prestige of the holding company assist in obtaining the lowest cost money from the sale of senior securities. Since it was formed, the Engineers Company has contributed $30,000,000 to the equity base of its subsidiary companies and in addition $9,500,000 of surplus earnings have been retained in the surplus accounts of subsidiaries. The building up in the subsidiary companies of an unusually competent key personnel through special training and broad experience in several locations and over a long period of years and the consistent maintenance of sound management policies through supervision by central office executives so trained and developed, have proven valuable to the subsidiaries. Substantial economies have been realized by the operating companies through group operation of im-

Engineers' Exhibit No. 37-H (Cont'd)

portant services furnished at cost, such as cooperative use of experts in various fields and savings in the cost of materials and equipment through grouping of purchases. The results which have been achieved by this method of operation over a period of years are evidenced in the generally efficient conduct of the business and in the progress which has been made in reducing rates (see page 32).

El Paso Natural Gas Company

In 1936 the Company made a substantial investment in the common stock of El Paso Natural Gas Company. Because of the Public Utility Holding Company Act Engineers could not own the stock directly, since the shares proposed to be purchased constituted control as defined in the Act. Consequently the stock was purchased with funds furnished by the Company and held by an independent trustee for the beneficial interest of the Company. As previously reported, blocks of this stock have been sold, reducing the amount presently held to 51,357 shares, which constitutes less than 9% of the present total common stock of El Paso Natural Gas Company. Since ownership of such a percentage does not constitute control under the Act, the Company recently arranged to transfer the stock to direct ownership. A dividend of $2.00 per share has been paid on this stock in each of the past four years. The earnings per share were $3.75 in 1940 and $3.74 in 1939. Other than these shares the Engineers Company has no investment outside of its subsidiaries.

Pages 8-9:

Service Arrangements with Engineers Public Service Company, Inc.

The operating subsidiaries of Engineers Public Service Company (Delaware) obtain economies and more efficient service through group operation of certain essential ser-

Engineers' Exhibit No. 37-H (Cont'd)

vices including executive, advisory, financial, purchasing, sales promotion, insurance, accounting, statistical, tax and corporate. These services are furnished on a nonprofit basis by Engineers Public Service Company, Inc. (N. Y.), a mutual service organization wholly owned by the operating subsidiary companies of Engineers Public Service Company. The cost of all services furnished to the operating subsidiaries of the Engineers Company, after assigning certain charges directly, was allocated proportionately among them on the basis of their respective operating revennes. The total amounts billed are shown on page 34. In 1940 the aggregate of these charges billed to operating subsidiaries was $296,025 (1939—$300,191), equivalent to less than six-tenths of one per cent of combined operating revenues. The mutual service organization also furnishes at estimated cost certain services to the parent company and to an intermediate holding company. The charges for such services in 1940 amounted to $65,389 (1939—$72,009), of which Engineers Public Service Company paid $57,377 (1939—$66,589).

* * * * *

Financing

The major financing operation undertaken during 1940 was the refunding of the senior securities of El Paso Electric Company (Texas). On December 30, 1940, $6,500,000 principal amount of First Mortgage 3¼% Bonds due 1970 and 15,000 shares of $4.50 dividend preferred stock were publicly offered through underwriters. On January 7, 1941, the proceeds, together with the proceeds of a $1,000,000 note placed with a bank, bearing interest at 2%-2¼% and maturing serially over a 7-year period, were used to call the $8,000,000 principal amount of First Mortgage 5% Bonds due 1950 and 7,785 shares of $6 dividend preferred stock. In connection with this transaction the property and business of Mesilla Valley Electric Company

Engineers' Exhibit No. 37-H (Cont'd)

were acquired by the El Paso Electric Company (Texas) through a contribution by El Paso Electric Company (Delaware) and Mesilla Valley Electric Company was liquidated. The total saving in charges initially resulting from these transactions amounts to $110,000 annually in consolidated earnings. Following the completion of these transactions in January 1941, El Paso Electric Company (Delaware) used surplus funds amounting to $1,150,000 to buy in 10,221 shares of its 7% preferred stock under tenders, including 2,520 shares out of 3,377 shares owned by the Engineers Company which had been tendered at cost, namely, $114.10 per share. The retirement of the publicly held shares will result in a further saving of $51,700 annually in consolidated earnings.

* * * * *

The Company has made application to the Securities and Exchange Commission for permission to buy 5,000 shares of its outstanding preferred stock, largely with the proceeds of the sale of the 2,520 shares of El Paso Electric Company (Delaware) 7% preferred stock mentioned above. Hearing on this application was held on April 2, 1941 and the Commission has the matter under consideration.

Pages 11-12:

Puget Sound Power & Light Company

The improved trend in business conditions in the area served by this subsidiary was accelerated by national defense activities. Total operating revenues increased $392,338 or 2.4% over 1939. Electric revenues, which constitute approximately 85% of the total, increased by 2.3%, more than offsetting rate reductions during 1939 and 1940 which aggregated $1,630,000 on an annual basis. Expenses of operation and maintenance increased by $703,034 or 10.6%, over one half of which resulted from increased expenditures in defense of Public Utility District condemna-

tion suits mentioned hereafter. Over one-half of the increase of nearly 10% in taxes was in Federal income taxes. The reduction of $318,442 in interest and amortization charges was due to an aggregate reduction in debt of approximately $9,000,000 in 1939 and 1940. Commencing April 15, 1940, quarterly dividends have been paid on the prior preference stock.

Three more Public Utility Districts were authorized in 1940 so that such districts are now authorized in 16 of the 19 counties served by the company. Of these, only three are operating on a substantial scale and these serve an aggregate of 22,925 customers. Of the six districts which have filed condemnation suits to acquire parts of the company's property three have been granted applications for decrees of public use and necessity, two such applications are pending and in the sixth case judgment was rendered on August 24, 1940 by the Federal District Court fixing $5,000,000 as the value of the property in Whatcom County which the District proposed to acquire. The Company has appealed this decision to the United States Circuit Court of Appeals. The City of Bremerton (population 29,314) has filed suit preparatory to an attempt to acquire the company's electric property in that City.

During the year Grand Coulee and Bonneville were placed under a single power marketing organization. Construction continued on the Grand Coulee project and 349,000 kilowatts are expected to be in operation by early 1942. Two additional units aggregating 108,000 kilowatts have been placed in service in the Bonneville power station which now has a capacity of 194,400 kilowatts. The Bonneville-Grand Coulee Administration continued to build transmission lines and is reported to have contracts for the delivery of 218,300 kilowatts of prime power. Two Public Utility Districts and one city, purchasing an aggregate of 1,850 kilowatts from the company, have given notice that they expect to purchase their future power requirements from the Administration.

Engineers' Exhibit No. 37-H (Cont'd)

In October, negotiations were opened by the Bonneville Administration to acquire the entire property of the company, and upon securing deferment of condemnation suits against the company by certain of the Public Utility Districts, the company's books and records were made available to them. A series of discussions has been had in an effort to develop a workable purchase plan, but no conclusion has been reached. While these negotiations are being continued with the Bonneville Administration, a Public Utility District representative has announced that the districts would resume individual condemnation proceedings without waiting for conclusion of the negotiations with the Bonneville Administration. Bills have been introduced in Congress to create an agency which would enable the Government to finance the acquisition of private utilities in this area.

Contingent liability:

Agreement to indemnify a surety company against all losses and expenses it might incur as guarantor of the payment, on various maturity dates between 1941 and 1948, inclusive, of $269,000 principal amount of municipal bonds assumed by The Western Public Service Company, with interest thereon until paid; and to guarantee payment of the annual premiums to the surety company.

---

* Decrease.

(a) On February 25, 1941, the Company made a contribution of $1,000,000 in cash to Virginia Electric and Power Company, a subsidiary company, which contribution was added to the investment in common stock of that company.

(b) Investments in subsidiary companies are carried at an amount based on the stated value of securities of the Parent Company issued, and cash paid, therefor.

(c) Represented by 51,357 shares of common stock of El Paso Natural Gas Company. The quoted market price on December 31, 1940 when applied to such shares indicates an amount of approximately $1,540,700.

(d) Represented by 156,001 shares $5 (cumulative) dividend preferred of no par value (entitled to $105 per share upon redemption or voluntary liquidation or $100 per share upon involuntary liquidation, plus accrued dividends), 193,831 shares $5.50 cumulative dividend preferred and 73,183 shares $6 cumulative dividend preferred of no par value (entitled to $110 per share upon redemption or voluntary liquidation or $100 per share upon involuntary liquidation, plus accrued dividends). Total preferred stock authorized 431,000 shares.

(e) Represented by 1,909,968 shares of $1 par value. Authorized 1,909,968 shares.

See Page 29 for detailed Statement of Capitalization.

There is pending before the Securities and Exchange Commission a proceeding, involving the Company and its subsidiaries, under Section 11 (b) (1) of the Public Utility Holding Company Act of 1935. This section provides for the restriction of integrated systems and incidental businesses which a holding company may control. It is impossible at this time to determine the ultimate effect of this proceeding on the Company and its subsidiaries.

Note: See explanatory notes on pages 22 and 23 which are to be read as an integral part of the consolidated balance sheet.

There is pending before the Securities and Exchange Commission a proceeding, involving the Company and its subsidiaires, under Section 11 (b) (1) of the Public Utility Holding Company Act of 1935. This section provides for the restriction of integrated systems and incidental businesses which a holding company may control. It is impossible at this time to determine the ultimate effect of this proceeding on the Company and its subsidiaries.

Pages 5-7:

ENGINEERS PUBLIC SERVICE COMPANY

Wilmington, Delaware,
March 26, 1942.

TO THE STOCKHOLDERS:

The gross revenues of the Company (the parent company), consisting of interest and dividends on securities owned, were $3,655,127 in 1941, a decline of $59,932 compared with 1940. Expenses of the Company were $313,666, approximately double those of 1940. The increase was due almost entirely to requirements of the Securities and Exchange Commission, and to costs in connection with the proceedings before that Commission under Section 11 of the Public Utility Holding Company Act. Effective May 1, 1941 the Company complied with a requirement of the Commission that none of the salaries of officers and employees of a holding company including applicable overhead expenses can be paid directly or indirectly by subsidiary operating companies regardless of the extent of the services rendered by such personnel to such companies. The result of such compliance was to relieve the operating subsidiaries of payment for substantial services furnished to them by officers and employees of the Company, although there was no reduction in the services rendered. Net income available for dividends and surplus in 1941 was $3,181,212 as compared with $3,394,169 in 1940. Dividends on preferred stocks amounted to $2,263,362, leaving a balance applicable to common stock and surplus of $917,850, equivalent to 48¢ per share compared to $1,108,977, or 58¢ per share in 1940.

The combined operating revenues of the subsidiary companies in 1941 amounted to $64,739,518, an increase of $7,645,864 over 1940. Operating expenses increased only

in proportion to the growth in revenue despite a substantial rise in wages and fuel costs. Combined taxes increased $4,295,003, or the equivalent of $2.25 per share on the common stock. This increase in taxes included $2,516,967 of Federal excess profits taxes, and an increase in Federal income taxes of $1,205,112. The decreases in interest and preferred dividend requirements reflected refunding operations. The final balance applicable to the parent company common stock and surplus on a consolidated basis was $2,429,497, or $1.27 per share, compared with $3,068,967, or $1.61 per share, in 1940. The difference between the final balance of consolidated earnings and of parent company earnings represents amounts retained in surplus by the subsidiary companies and not declared out in the form of dividends on stocks owned by the parent company.

In the above figures for consolidated balance applicable to Engineers Public Service Company the earnings of Puget Sound Power & Light Company are eliminated because of the reserve set up for depreciation in the value of investment in that company including the large dividend arrearages on its preferred stocks. All other subsidiary companies paid their regular preferred dividends in 1941. The Key West Electric Company is the only other company in the Engineers system having dividends in arrears at December 31, 1941.

The complete combined income statement which appears on pages 18 and 19 is further supported by the tabulation on page 26 showing the contribution of each individual subsidiary company to the combined balance applicable to the parent company.

Dividends

Regular quarterly dividends have been paid on the preferred stocks of the Engineers Company during the year and there are no preferred dividends in arrears; no dividends were paid on the common stock of the Company. The decline in earnings of subsidiaries due to increased

Engineers' Exhibit No. 37-I (Cont'd)

Federal taxes together with the uncertainties created by war conditions, pending tax legislation and the proceedings before the Securities and Exchange Commission, cause the Directors of your Company to believe that it is in the interest of both the preferred and the common stockholders to make no payment to the common stockholders at this time.

Public Utility Holding Company Act

The stockholders have been advised from time to time of the proceedings before the Securities and Exchange Commission relating to compliance with Section 11 of the Public Utility Holding Company Act. Hearings were held almost continuously from March 25 to November 4, 1941. One of the matters of most importance to this system was the interpretation of the geographical provisions of this Section. Counsel for Engineers and its subsidiaries contended that the proper interpretation was a "two-area" interpretation, which would have permitted the Company to retain, so far as the geographical standards were concerned, its interest in Virginia Electric and Power Company, Gulf States Utilities Company and El Paso Electric Company. This was contested by Commission Counsel and on July 23, 1941 the Commission stated that it construed this Section in accordance with the so-called "one-area" interpretation, which meant that the Company could retain at the most no more than Virginia Electric and Power Company and Savannah Electric and Power Company on the one hand, or Gulf States Utilities Company and El Paso Electric Company on the other hand. In the case of either of these alternatives the Company would have to prove that the other requirements of the Section were met. During the hearing, testimony was presented as to the methods of operation of these subsidiary companies and the economies realized by joint operation of electric, gas, transportation and other businesses and also the operating, tax and financial economies to be realized by combining in a holding company system Savannah Electric and Power

Engineers' Exhibit No. 37-I (Cont'd)

Company with Virginia Electric and Power Company, and by combining El Paso Electric Company with Gulf States Utilities Company.

Your Company has repeatedly pointed out during the past several years that its subsidiaries realize substantial economies and advantages not available to independent companies of comparable size. Such advantages include financial support from the parent company, which provides equity money and assists them in obtaining the lowest cost funds from the sale of senior securities; the development in the system of an unusually competent key personnel; consistent maintenance of sound management policies through supervision by skilled central office executives; the cooperative use of skilled experts in various specialized fields, and savings in the cost of materials and equipment through the grouping of purchases. The results which have been achieved by this method of operation over a period of years are evidenced in the generally efficient conduct of the business and in the progress which has been made in reducing rates.

That the above advantages are not limited to the Engineers holding company system alone but are characteristic of holding companies is strikingly demonstrated in studies which Dr. Merwin H. Waterman, of the University of Michigan staff, made at the Company's instance for use in its Section 11 proceeding. Dr. Waterman's studies covered the entire public utility industry and were principally based upon information taken from the publications and files of the Federal Power Commission. His general conclusions are summarized as follows:

1. Holding company subsidiaries serve the public at lower rates than independent companies. This is true in all parts of the country and for every size group of communities or of utility companies;

2. Larger companies serve at lower rates than smaller companies;

Engineers' Exhibit No. 37-I (Cont'd)

3. Holding company subsidiaries show definite economies in operation compared to independent companies, particularly as to administrative and general expenses including supervision costs; and

4. Investors in senior securities of holding company subsidiaries are at least as well off as investors in such securities of independent utility companies.

Company's counsel proffered the studies prepared by Dr. Waterman as evidence furnishing a basis for contesting the constitutionality of Section 11 of the Public Utility Holding Company Act. However, the Commission refused to admit these studies as evidence, on the ground that it had no authority to pass upon the constitutionality of the statute under which it is acting.

Since the closing of the record in these proceedings Counsel for the Commission and Counsel for the Engineers companies have both filed requests for specific findings of fact and accompanying briefs and the matter has been set down for oral argument on April 2, 1942 before the Commission. Commission Counsel, in their brief, urge the Commission to require (1) that each subsidiary which is engaged in the electric business divest itself of any interest in gas, transportation, water or ice business and (2) that the holding company be limited to owning a single subsidiary. Counsel for the Engineers companies oppose vigorously such an interpretation and application of the Act. At the present time it cannot be determined when the Commission will take further action in this matter, nor is it possible to state what the ultimate effect of this action will be on the Company and its security holders.

Divestment Orders

The Securities and Exchange Commission, during 1941, directed Engineers to divest itself of its interest in three groups of properties, namely, Puget Sound Power & Light

Engineers' Exhibit No. 37-I (Cont'd)

Company, The Key West Electric Company, and certain properties formerly owned by The Western Public Service Company (Maryland). Under the terms of the orders the Company has until July 23, 1942 to divest itself of its interest in the first two groups of properties and until January 2, 1943 to divest itself of its interest in the third group of properties. The Commission has pointed out in another case that the Act gives it discretion to permit additional time if conditions are such that compliance with the order would involve undue loss. The Company intends to comply with these orders if it can do so within these limits.

Sale of the Western Public Service Company (Maryland)

During the past several years the Company has had negotiations with public agencies in Nebraska regarding the sale to them of The Western Public Service Company. The Securities and Exchange Commission indicated that it would eventually issue an order directing the Company to divest itself of its interest in this subsidiary. In October 1941 the Western company sold its property at Las Animas, Colorado to the City. On January 2, 1942 the Engineers Company sold the common stock of the Western company to Consumers Public Power District of Nebraska, after having first acquired the Wyoming properties and ownership of the subsidiary of the Western company which owned the Missouri properties. A new subsidiary, The Western Public Service Company (Delaware), was formed to own and operate the Wyoming properties. The properties retained produced in 1941 approximately one-quarter of the total operating revenues of this group. The net proceeds to the Engineers Company were approximately $3,070,000 cash from this sale (see note (a) to the parent company balance sheet).

Purchase of Engineers Preferred Stock

In May 1941 the Company purchased under tenders 5,000 shares of its outstanding preferred stock, largely with

Engineers' Exhibit No. 37-I (Cont'd)

the proceeds of the sale of 2,520 shares of El Paso Electric Company (Delaware) 7% preferred stock which was tendered to that company at cost in January 1941. The average price paid for the shares of Engineers preferred stock was $85.02 per share and the reduction in annual dividend requirements was $29,108.

In December 1941, in connection with the sale of The Western Public Service Company (Maryland) above described, the Company applied to the Securities and Exchange Commission for authority to purchase 35,000 shares of its own preferred stock, either under tenders or on the New York Stock Exchange. The Commission heard the Company with respect to this matter on December 22, 1941 and reconvened the hearing on March 20, 1942, but has not as yet rendered a decision.

El Paso Natural Gas Company

The Company continues to hold 51,357 shares of the common stock of El Paso Natural Gas Company, which constitutes less than 9% of the outstanding common stock of that company. Dividends of $2.00 per share were received on this stock in each of the four years prior to 1941 and in that year dividends of $2.30 were received. Except for these shares the Engineers Company has no investment other than the securities of its subsidiaries.

Pages 9-10:

Service Arrangements With Engineers Public Service Company, Inc.

The operating subsidiaries of Engineers Public Service Company (Delaware) obtain economies and more efficient service through group operation of certain essential services, including executive, advisory, financing, purchasing, sales promotion, insurance, accounting, statistical, tax and corporate. These services are furnished on a non-profit basis by Engineers Public Service Company, Inc. (New York), a mutual service organization wholly owned by the

Engineers' Exhibit No. 37-I (Cont'd)

operating subsidiaries of Engineers Public Service Company. The mutual service organization billed the operating companies in the amount shown on page 34 of this report covering that portion of the cost of these services allocated to them. In 1941 the aggregate of the charges billed the operating subsidiaries was $204,654 (1940—$296,025), equivalent to .3% of the combined operating revenues. The reduction in the proportion of the total costs of these services billed to the operating companies resulted from meeting certain requirements of the Securities and Exchange Commission whereby, subsequent to April 1941, no part of the salaries of officers and certain other employees of the mutual service organization including applicable overhead expenses is charged to the operating subsidiaries. Such salaries and expenses are now billed in their entirety to the holding companies. There has been no change, however, in the services rendered to the operating companies. The charges for such services in 1941 which were allocated to the Engineers Company and to the El Paso holding company amounted to $157,716 (1940—$65,389), of which the Engineers Company paid $147,361 (1940—$57,377).

Pages 11-12:

Puget Sound Power & Light Company

General business conditions, accelerated by war activities, improved throughout the year. Total operating revenues increased $1,876,624, or 11.2%, over 1940. Electric revenues, which constituted approximately 84% of the total, increased by $1,252,432, or 8.7%, and bus transportation revenues increased $552,119, or 32%. Expenses of operation and maintenance increased $741,116, or 10.1%, of which 70% was in payroll. Taxes increased by $526,764, or 20.7%, aproximately two-thirds of which was in Federal income taxes.

Public utility districts are authorized in sixteen of the nineteen counties served by the company; six of these operate electric systems serving a total of approximately

Engineers' Exhibit No. 37-I (Cont'd)

28,000 customers. Ten districts have filed condemnation suits to acquire parts of the company's property, four of which have been set for trial during 1942. In respect to the Whatcom County District it will be recalled that a condemnation award of $5,000,000 was set by the Federal District Court in August 1940. This decision, which was appealed by the company, was affirmed by the United States Circuit Court of Appeals and upon further appeal, review was denied by the United States Supreme Court on March 2, 1942. It is understood that the Whatcom County District is taking steps necessary to acquire ownership of the company's property in that county.

During the year expansion continued at the Federal government's Grand Coulee and Bonneville projects. At Grand Coulee two main generating units aggregating 216,000 kilowatts are now installed with seven other units of 108,000 kilowatts each scheduled for installation by 1945. The Bonneville plant now has in operation five units with an aggregate capacity of 248,000 kilowatts with five additional units of 54,000 kilowatts each scheduled for installation during the next two years. The Bonneville-Grand Coulee Administration continued to build transmission lines and substations in the area, including lines into Seattle and Tacoma.

It has already been stated that the Engineers Company is under order of the Securities and Exchange Commission to divest itself of this property and in accordance therewith, discussions have been held with the Bonneville Administration as to how a sale could be effected. However, no suitable means of financing such acquisition by the Bonneville interests has been developed. A plan to establish a non-profit corporation to acquire the company's property with money to be loaned by the Reconstruction Finance Corporation was worked out but further legislative authority must be granted to that agency. Several bills are pending in Congress to create a Columbia Valley Authority with power to finance the acquisition of private utility companies in the northwest.

Note: See explanatory notes on pages 23 and 24 which are to be read as an integral part of the consolidated balance sheet.

There is pending before the Securities and Exchange Commission a proceeding, involving the Company and its subsidiaries, under Section 11(b)(1) of the Public Utility Holding Company Act of 1935. This section provides for the restriction of integrated systems and incidental businesses which a holding company may control. On July 23, 1941, the Commission issued an Order directing the Company to dispose of its interest in The Key West Electric Company and Puget Sound Power & Light Company within one year, and on December 29, 1941, the Commission issued an Order directing the Company to dispose, within one year, of its interest in properties acquired from The Western Public Service Company (Maryland) prior to the sale of that company. The Commission has pointed out in another case that the Act gives it discretion to permit additional time if conditions are such that compliance with the Order would involve undue loss. The Company intends to comply with these Orders if it can do so within these limits. The proceeding is still in progress to determine what of its other properties the Company may be allowed to retain. It is impossible at this time to determine the ultimate effect of this proceeding on the Company and its subsidiaries.

Virginia Electric and Power Co.	3,830,955.69	1,171,602.00		2,659,353.69	9,265.32	2,650,088.37	2,946,690.49	2,000,671.20	2,222,968.00
The Western Public Service Co. & Sub. Cos.	194,847.61	119,453.54		75,394.07		75,394.07	64,438.97		
Total	$9,726,073.46(c)	$2,840,037.98	$1,583,970.00	$5,302,065.48	$27,561.92	$5,274,503.56(a)	$5,320,129.97(b)	$3,230,467.20	$3,367,968.00

(a) Puget Sound Power & Light Company's earnings, in 1941, exceeded its annual preferred dividend requirements of $2,133,970.00 by $462,627.21 of which the Parent Company's proportion amounted to $459,451.54 which, in consolidation, was credited to the Parent Company's reserve for depreciation in value of investments in subsidiary companies instead of increasing consolidated earnings. See note (b) in combined income statement notes on page 22.

(b) Puget Sound Power & Light Company, in 1940, failed to earn its annual preferred dividend requirements of $2,133,970.00 by $209,589.63 of which the Parent Company's proportion amounted to $208,150.91 which, in consolidation, was charged to the Parent Company's reserve for depreciation in value of investments in subsidiary companies instead of reducing consolidated earnings. See note (b) in combined income statement notes on page 22.

(c) Balance for dividends and surplus as shown in combined income statement (see page 18).

Pages 5-7:

ENGINEERS PUBLIC SERVICE COMPANY

Wilmington, Delaware,
April 8, 1943.

TO THE STOCKHOLDERS:

The gross revenues of the Company (the parent company), consisting of interest and dividends on securities owned, were $2,809,855 in 1942, a decline of $845,272, or 23%, under 1941. Two-thirds of this decline resulted from a reduction in common dividends received from the Virginia subsidiary. The earnings of this subsidiary were approximately the same as in 1941 but dividends were reduced because of the operation of the restrictive clause in connection with certain bank loans of that subsidiary and Federal income tax adjustments within the respective dividend declaration periods. The balance of the decline was substantially accounted for by the decrease in earnings of the Gulf States subsidiary due to higher Federal income taxes, and by the loss of earnings resulting from the sale of The Western Public Service Company (Maryland) in January 1942. Expenses of the Company were $283,440, a decline of $30,226 under 1941. Increased costs by reason of a change in the basis of allocating expenses between the parent company and subsidiaries, effective May 1, 1941, to meet requirements of the Securities and Exchange Commission were more than offset by a reduction in charges on account of proceedings under Section 11 of the Public Utility Holding Company Act. Taxes decreased slightly because of lower income. Net income available for dividends and surplus in 1942 was $2,371,925 as compared with $3,181,212 in 1941. Dividends on preferred stocks amounted to $2,256,084 leaving a balance applicable to common stock and surplus of $115,841 equivalent to 6¢ per share, compared with $917,850, or 48¢ per share, in 1941.

Engineers' Exhibit No. 37-J (Cont'd)

The trend of combined operating revenues, expenses and taxes of the subsidiary companies is discussed hereafter under "Trend of Combined Income." The total consolidated income applicable to the Company (which excludes the earnings of Puget Sound Power & Light Company) was $4,531,861, a decrease of $634,913 under 1941. The difference between this amount and the gross revenues of $2,809,855 of the parent company represents amounts retained in surplus and not declared out in the form of common dividends by subsidiary companies. The balance of consolidated earnings applicable to the parent company common stock and surplus was $1,837,847, or 96¢ per share, compared with $2,429,497, or $1.27 per share, in 1941.

The consolidated financial position of the Company has been improved during the year as evidenced by the increase of $7,732,122 in net current assets and the reduction of $1,482,709 in long-term debt which reflect the net effect of the sale of The Western Public Service Company (Maryland) and of sinking fund payments during the year and the borrowing of $4,000,000 additional by Virginia Electric and Power Company. Such improved condition, if it can be maintained, will enable the subsidiary companies to make their fullest contribution not only to the war effort, but also to the solution of the postwar problems involved in a readjustment of the national economy to a peacetime basis.

Dividends

Regular quarterly dividends have been paid on the preferred stocks of the Engineers Company during the year. No dividends were paid on the common stock of the Company. In the opinion of the Directors, the decline in earnings of subsidiaries applicable to the parent company, the possibility of further increases in Federal tax levies and expenses due to the effect of the war and the uncertainties in connection with the Section 11 proceedings before the Securities and Exchange Commission discussed below,

Engineers' Exhibit No. 37-J (Cont'd)

taken together, make the payment of common dividends in the near future inadvisable.

Public Utility Holding Company Act

Stockholders have been advised from time to time of the status of proceedings before the Securities and Exchange Commission. In March 1942, Counsel for the Company and its subsidiaries filed a brief with the Commission summarizing the evidence presented during the extensive hearings in 1941, and on April 2, 1942 oral argument was had before the Commission. On September 16, 1942 and October 6, 1942 the Commission issued orders which, in effect directed the Company to divest itself, within one year, of all of its remaining investments excepting that in Virginia Electric and Power Company and, with respect to this subsidiary, directing that it must dispose of its gas and transportation operations.

On November 14, 1942 an appeal from these orders was filed in the United States Court of Appeals for the District of Columbia. The orders were challenged on several grounds, including the constitutionality of Section 11(b)(1) of the Act, the Commission's "one area" interpretation of the geographical limitation in clause (B) of that Section and the validity of the Commission's order requiring the divestment of businesses other than electric by the subsidiary retained. Counsel for the Company filed a brief on February 23, 1943 and the case was set for argument on May 3, 1943. One of the principal points in this appeal regarding the constitutionality of Section 11(b)(1) of the Act is that the Commission excluded proffered evidence in the case which showed that the remedies provided in this Section had no relation to the abuses which the Act sought to cure. The excluded evidence showed that holding company subsidiaries serve the public at lower average rates and operate more efficiently than independent companies, that larger companies serve the public at lower average

rates than smaller companies and that investors in senior securities of holding company subsidiaries have fared at least as well as investors in such securities of independent companies. Such evidence is related to the issue of whether the breaking up of holding company systems will accomplish the avowed objectives of the Act, namely, the protection of rate-payers and investors.

Divestment Orders Issued in 1941

In connection with the order of July 23, 1941 of the Securities and Exchange Commission requiring the Company to dispose of its interest in Puget Sound Power & Light Company within one year, the Company on May 14, 1942 filed with the Commission a Recapitalization Plan of the Puget Sound Company in which that company joined as a party. Stockholders were advised of this action in a letter dated June 1, 1942. This Plan, as amended, provides, among other things, that Engineers will receive 3% of the new common stock of the Puget Sound Company to be issued in exchange for the present $6 preferred and common stock. Since the Plan could not become effective within the period specified in the order, the Company petitioned the Commission on May 28, 1942 to allow it additional time to comply with the said order. The par value of the new common stock which Engineers would receive under the Plan as amended is $654,650 and the pro forma earnings accruing to such stock upon completion of the Plan, including the refinancing, would currently be in excess of $100,000 annually. The Commission gave conditional approval to the Plan on March 16, 1943 and on April 1, 1943 in connection with approval of the financing (described on page 10) stated to the press that it would give final approval to the Plan in the near future. Before the Plan may become effective approval must be obtained from a Federal Court. The Company expects to dispose of the new common stock it will receive upon completion of the Plan.

Engineers' Exhibit No. 37-J (Cont'd)

The order of July 23, 1941 above-mentioned also required the Company to dispose of its interest in The Key West Electric Company. Although there have been negotiations regarding the sale of this property, the Company has been unable to complete any sale and on May 28, 1942 it filed a request for a year's extension of the time in which to comply.

On December 29, 1941 the Commission issued an order requiring the Company to divest itself of its interest in the Wyoming and Missouri properties formerly held by The Western Public Service Company (Maryland). The Company has also been unable to dispose of these properties on a reasonable basis within the year and on December 9, 1942 filed a request for an extension until January 2, 1944 in which to comply.

Purchase of Preferred Stock

On December 5, 1941, in connection with the sale of The Western Public Service Company (Maryland), the Company applied to the Securities and Exchange Commission for authority to utilize the proceeds to purchase 35,000 shares of its own preferred stock, either under tenders or on the New York Stock Exchange. The Commission held hearings on the application in December 1941 and in March 1942. In April 1942 briefs were filed and the case was argued before the Commission. The Company believed that the proposed action was clearly in the interest of all of its stockholders, since those preferred stockholders who chose to tender their stock to the Company would probably get a better price than they would by selling the stock on the New York Stock Exchange, and the remaining stockholders would be benefited by the retirement at a discount of the stock purchased and by the reduction in dividend requirements resulting from the use of the money which has, perforce, remained idle. On February 15, 1943 the Commission issued its opinion and order denying the Com-

Engineers' Exhibit No. 37-J (Cont'd)

pany's application on the ground that until the Company has filed a plan for compliance with the Commission's divestment orders the preferred stockholders cannot determine the value of their stock and might therefore sell it at too high or too low a price. The opinion suggests as an alternative that the money be used to retire senior securities of the subsidiaries and one member of the Commission suggested a pro rata pay down on the preferred stock.

El Paso Natural Gas Company

The Company continues to hold 51,357 shares of the common stock of El Paso Natural Gas Company, which constitute less than 9% of the outstanding common stock of that company. Dividends of $2.40 per share were received in 1942 and $2.30 per share in 1941. Except for these shares and United States Certificates of Indebtedness the Engineers Company has no investments other than the securities of its subsidiaries.

Page 9:

Service Arrangements with Engineers Public Service Company, Inc.

The operating subsidiaries of Engineers Public Service Company (Delaware) obtain economies and more efficient service through group operation of certain essential services, including executive, advisory, financing, purchasing, sales promotion, insurance, accounting, statistical, tax and corporate. These services are furnished on a non-profit basis by Engineers Public Service Company, Inc. (New York), a mutual service organization wholly owned by the operating subsidiaries of Engineers Public Service Company. The mutual service organization billed the operating companies in the amounts shown on page 34 of this report covering that portion of the cost of these services allocated to them. In 1942 the aggregate of the charges billed the operating subsidiaries was $160,582 (1941—$204,654),

Engineers' Exhibit No. 37-J (Cont'd)

equivalent to 0.22% of the combined operating revenues. The reduction in the proportion of the total costs of these services billed to the operating companies resulted from meeting certain requirements of the Securities and Exchange Commission whereby, subsequent to April 1941, no part of the salaries of officers and certain other employees of the mutual service organization, including applicable overhead expenses, is charged to the operating subsidiaries. Such salaries and expenses are now billed in their entirety to the holding companies. There has been no change, however, in the services rendered to the operating companies. The charges for such services in 1942 which were allocated to the Engineers Company and to the El Paso holding company amounted to $189,765 (1941—$157,716), of which the Engineers Company paid $177,562 (1941—$147,361).

Pages 10-11:

Puget Sound Power & Light Company

During the year the upward trend in general business and industrial activity continued. Total operating revenues increased $3,159,253 or 17%. Electric revenues, which constituted 79% of the total, increased $1,546,640 or 10%, of which increase two-thirds was derived from residential and rural customers as the result of an increase of 281 kilowatt hours or 16% in average annual use and a rise of 4% in the number of customers. Transportation revenues, which constituted 17% of the total, increased $1,425,920 or 63%.

Expenses of operation and maintenance increased $1,794,574 or 22%, of which $1,047,631 or 58% was in payroll, which increased by 22%. Purchased power and fuel for steam power production accounted for the greater part of the remainder. Balance for common stock after provision for only those preferred dividends currently accruing amounted to $1,192,019, an increase of $729,392 over 1941.

Engineers' Exhibit No. 37-J (Cont'd)

On May 14, 1942, the company joined with the Engineers Company in filing with the Securities and Exchange Commission a Recapitalization Plan which is referred to under "Divestment Orders Issued in 1941". The Plan, as amended, provided for refinancing the company's funded debt with $52,000,000 principal amount of thirty year 4¼% first mortgage bonds and $6,500,000 of 3⅛% bank loans maturing serially over a five year period. The Plan further provides that: prior preference stockholders will receive one-fourth share of additional prior preference stock, plus $2.50 in cash per share, and the balance of the unpaid and accrued dividends on that stock will be cancelled; preferred stockholders will receive 97% of the new common stock in exchange for their shares, in the ratio of one and six-tenths shares of new common for each share of old preferred stock and the unpaid and accrued preferred dividends on that stock will be cancelled; and the common stockholders (principally the Company) will receive 3% of the new common in exchange for their shares, in the ratio of one share of new common for each 100 shares of old common stock. This Plan when finally approved by the Commission must also have the approval of a Federal Court before it becomes effective. Within 100 days after the consummation of the Recapitalization Plan a special meeting of the stockholders of the company will be held to elect a Board of Directors for which Board any stockholder will be permitted to make nominations.

On March 29, 1943 an underwriting syndicate offered the company 102.05% of the principal amount for the $52,000,000 of bonds bearing a 4¼% coupon. The Commission issued the requisite authorization and on April 2, 1943 the bonds were offered to the public at 104¼. On April 8 the company received $53,066,000 for the bonds and $6,500,000 from the bank loans and called for redemption all of its outstanding First and Refunding Mortgage Bonds.

Public Utility Districts have been organized in sixteen of the nineteen counties served by the company. Ten Dis-

Engineers' Exhibit No. 37-J (Cont'd)

tricts have filed condemnation suits to acquire parts of the company's property. In four of these cases condemnation awards have been entered but the Districts have been unable to finance the purchase of the property thereunder; one District obtained an award on March 19, 1943; three more condemnation cases are pending, one of which is scheduled for trial later in the year. Two suits have been dismissed, but may be reopened.

An initiative bill was enacted by the Washington State Legislature on February 17, 1943 which, among other things, would authorize Public Utility Districts to combine and form "Joint Commissions" for the purpose of acquiring existing electric utility systems. The Supreme Court of the State of Washington determined on March 17, 1943 that the measure is subject to referendum and it is reported that preliminary steps are being taken to obtain the 30,000 signatures necessary for a referendum. If such petition is legally filed this initiative will be submitted to the electorate in November 1944 to determine whether or not it shall be adopted.

During the year expansion continued at the Federal government's Grand Coulee and Bonneville hydro-electric projects which now have a combined installed generating capacity of 701,400 kilowatts. Additional generating units scheduled for completion by the end of 1944 aggregate 615,000 kilowatts. The Bonneville-Grand Coulee Administration has constructed a transmission system in Washington and Oregon extending into the area served by the company.

Pages 5-8:

ENGINEERS PUBLIC SERVICE COMPANY

Wilmington, Delaware,
April 17, 1944.

To the Stockholders:.

The gross revenues of the Company (the parent company) consisting of dividends and interest on securities owned, were $4,025,941 in 1943, an increase of $1,216,086 or 43% over 1942. Greater common dividends from the Virginia and Gulf States subsidiaries accounted for 85% of this gain. Expenses of the Company were $236,870, a decline of $46,571 under 1942; non-recurrence of 1942 expenses incidental to the plan of recapitalization of Puget Sound Power & Light Company and lower charges from the mutual service company account substantially for this reduction. The increase of $60,490 in taxes was almost wholly in Federal income taxes by reason of greater taxable income. Net income available for dividends and surplus in 1943 was $3,574,108 as compared with $2,371,925 in 1942. Dividends on preferred stocks amounted to $2,256,084 leaving a balance applicable to common stock and surplus of $1,318,024; equivalent to 69¢ per share, compared with $115,841, or 6¢ per share in 1942.

The discussion of operations of subsidiaries included hereinafter under "Subsidiary Companies" as well as the consolidated financial statements, exclude Puget Sound Power & Light Company, The Key West Electric Company and Baton Rouge Bus Company, Inc., which ceased to be subsidiaries during the year 1943.

The balance of combined earnings of subsidiary companies applicable to common stocks owned by Engineers was $5,702,373 as compared with $4,195,707 in 1942, whereas the amount paid as common dividends to the parent company was $3,681,357 in 1943 and $2,512,498 in 1942. The

difference represents amounts retained in surplus of subsidiary companies and not declared out in the form of common dividends. In the case of certain subsidiaries, agreements in connection with bank loans currently restrict the payment of such dividends. Total consolidated earnings in 1943 applicable to securities held by Engineers was $6,046,957 as compared with $4,493,105 in 1942. After expenses, taxes, interest and preferred dividends the balance of consolidated earnings applicable to the parent company common stock was $3,339,040, or $1.75 per share, compared with $1,799,090, or $0.94 per share, in 1942.

Dividends

Regular quarterly dividends have been paid on the preferred stocks of the Engineers Company during the year. No dividends were paid on the common stock, and, in the opinion of the Directors, the payment of common dividends is presently inadvisable in view of the problems facing the Company should the order of the Securities and Exchange Commission requiring disposition of all the assets of the Company except its interest in Virginia Electric and Power Company be sustained in the courts.

Because of the loss sustained by the Company upon the sale in February, 1944, of its holdings of shares of common stock of Puget Sound Power & Light Company it would appear, based upon present estimates, that no part of the dividend distributions which have been paid or which will normally be payable on the dates indicated below on shares of preferred stock of the Company, will be subject to Federal income taxes in the hands of recipient stockholders:

	Preferred Stock		
	$5 Dividend Series	$5.50 Dividend Series	$6 Dividend Series
April 1, 1944	$1.25 per share	$1.37½ per share	$1.50 per share
July 1, 1944	1.25 per share	1.37½ per share	1.50 per share
October 2, 1944	1.25 per share	1.37½ per share	1.50 per share

However, definite determination of the taxable status of the aforesaid normal dividend payments in the hands of recipient stockholders cannot be ascertained until after the

close of the calendar year 1944; stockholders will be advised when such determination is known.

Public Utility Holding Company Act

Stockholders have been advised from time to time of the status of proceedings before the Securities and Exchange Commission. As a result of the petition filed on November 14, 1942 for a review in the United States Court of Appeals for the District of Columbia, the Court on November 22, 1943 set aside the orders issued by the Securities and Exchange Commission on September 16 and October 6, 1942 which directed, among other things, that Engineers divest itself of ownership and control within one year of all its subsidiaries except Virginia Electric and Power Company, which, if retained, must dispose of its gas and transportation businesses, and remanded the case to the Commission for further proceedings in accordance with its opinion. The grounds for the reversal were, in substance, that Engineers was entitled to more time to determine whether it desired to retain Virginia Electric and Power Company or Gulf States Utilities Company as its single integrated system and that the interpretation of the Act upon which the Commission directed the divestment of the transportation and other incidental businesses was incorrect. The Court, however, decided adversely to Engineers and its subsidiaries on all other issues, including the constitutionality of the Act and the Commission's so-called one-area interpretation of Section 11(b)(1) of the Act which interpretation permits the retention of public utility systems, in addition to the single system, only if they are located in the same State as the single system or States adjacent thereto. Both the Securities and Exchange Commission and the Company have applied to the Supreme Court of the United States for writs of certiorari to bring these issues before that Court.

Divestment Orders and Disposition of Properties

Stockholders were advised of the order of the Securities and Exchange Commission, under Section 11(b)(1) of the

Engineers' Exhibit No. 37-K (Cont'd)

Public Utility Holding Company Act of 1935, issued on July 23, 1941, directing the Company to dispose of its interest in the Puget Sound Power & Light Company and The Key West Electric Company within one year.

On April 27, 1943 the Securities and Exchange Commission adopted an order approving a plan for recapitalization of Puget Sound Power & Light Company and the Commission filed an application in the Federal District Court in Boston, Massachusetts to enforce the terms and provisions of the plan. On June 10, 1943 the court entered an order which provided for enforcement of the plan effective on September 13, 1943. Engineers received for its holdings of old common stock of Puget Sound Power & Light Company 65,466 shares of the new common stock of the par value of $10 per share. Engineers in December 1943 and February 1944 disposed of the 65,466 shares for an aggregate net price of $777,475. The investment of Engineers in Puget Sound Power & Light Company was $34,097,994. The total loss was therefore $33,320,519, of which $29,297,000 was charged against the reserve created in 1938 for depreciation in the value of this investment, $75,358 was charged against earned surplus in December 1943, representing the loss on 1,200 shares sold in that month and $3,948,161 is provided for by a reserve set up in December 1943 through a charge to earned surplus to provide for the loss to be realized through the sale of the remaining investment in February 1944. Based on the rates in the Revenue Act of 1943, enacted February 25, 1944, it is estimated that the annual saving in consolidated Federal income and excess profits taxes, by reason of the divestment of Puget Sound Power & Light Company, will amount to approximately $442,000.

With respect to The Key West Electric Company, all of the securities of that company owned by Engineers were sold on August 13, 1943. The investment of Engineers in The Key West Electric Company was $325,701. The net proceeds of the sale, subject to certain minor adjustments, were $712,229 which resulted in a net gain on the books of

Engineers' Exhibit No. 37-K (Cont'd)

Engineers of $386,528 which was credited to earned surplus. The reserve of $229,000 established in 1938 for depreciation in the value of this investment was transferred to capital surplus.

In compliance with the order of December 29, 1941 of the Securities and Exchange Commission directing the Company to dispose, within one year of date of acquisition (January 2, 1942), of its interest in the properties formerly owned by The Western Public Service Company (Maryland), certain minor isolated properties in Wyoming and Kansas were sold in 1942 and 1943 and the Company is endeavoring to dispose of the remaining properties.

Although the Company, as hereinbefore stated, is opposing in the courts the order of the Securities and Exchange Commission issued September 16, 1942 under Section 11 (b)(1) of the Public Utility Holding Company Act of 1935 directing the Company, among other things, to divest itself of ownership and control of all subsidiaries except Virginia Electric and Power Company, nevertheless, certain steps in connection with the disposition of properties directed to be divested by that order have been taken.

The Company on July 2, 1943 sold its investment in Baton Rouge Bus Company, Inc. consisting of the entire capital stock of that company at a net price of $360,801. Since the investment of Engineers was $180,000, the result was a gain of $180,801, which was credited to earned surplus.

The Company negotiated with the Mayor and City Council of the City of El Paso (Texas) a contract for the sale to the City of the entire common stock of El Paso Electric Company (Delaware) for $6,947,571, plus certain adjustments, including net current assets, subject to approval by the voters. At a special election in October 1943 the voters rejected the contract.

On December 31, 1943 El Paso Electric Company (Texas) sold its transportation and bridge properties for an aggregate price of $828,086 of which $800,000 was for fixed property and business and $28,086 was for related materials and supplies at cost. On the same date El Paso

Engineers' Exhibit No. 37-K (Cont'd)

Electric Company (Delaware) sold the entire capital stock of El Paso and Juarez Traction Company for an aggregate price of $370,883, subject to audit adjustment for changes in net current assets. While the investment of El Paso Electric Company (Delaware) as between its two subsidiaries was not segregated on its books, studies disclosed that the proceeds from the sale represented substantially the cost of the Juarez investment and therefore the full amount was credited to the investment account.

The Company owned at December 31, 1943, 51,357 shares, or less than 9%, of the common stock of El Paso Natural Gas Company. Dividends of $2.40 per share were received on this stock in 1942 and 1943. The Company in September 1943 made an exchange offer to its preferred stockholders whereby two shares of El Paso Natural Gas Company common stock, plus varying amounts of cash, were offered in exchange for preferred stock of Engineers. The offer was withdrawn because, before the exchange could be effected, the market price of Engineers preferred stock had advanced to a value beyond that of the offer. On March 2, 1944 the Company sold for cash, pursuant to invitation for bids, its holdings of El Paso Natural Gas Company common stock at a price of $1,523,300. Since the investment of Engineers was $427,975, the result was a gain of $1,095,325, which was reflected in the charges to earned surplus creating the reserve set up in December 1943 to provide for the net effect of the sale of this stock and the stock of Puget Sound Power & Light Company.

Possible Plan for Further Disposition

If the outcome of the present litigation involving Section 11(b)(1) shall make it necessary or desirable to do so, it is hoped that it will be possible to develop a plan under Section 11(e) which will meet the approval of the Securities and Exchange Commission under which Engineers' interest in Gulf States Utilities Company and El Paso Electric Company (Texas) would be distributed to its security holders

Engineers' Exhibit No. 37-K (Cont'd)

through liquidating holding companies, the preferred stocks of which would be distributed to the preferred stockholders of Engineers and the common stocks of which would be distributed to the common stockholders of Engineers. The net income of such liquidating holding companies, including Engineers, would be used exclusively for payment of preferred dividends and retirement of their preferred stock. The remaining smaller properties would be disposed of by sales when such sales could be made on an advantageous basis and the proceeds from such sales would be devoted to the retirement of the preferred stock of Engineers and the liquidating holding companies. When the preferred stocks of such two liquidating holding companies had been entirely retired the common stocks of their subsidiaries would be distributed pro rata in liquidation to their common stockholders. Upon establishment of such liquidating holding companies the mutual service company, located in New York, N. Y., would be dissolved. As soon as the present tax advantage of maintaining Engineers as the parent of Virginia Electric and Power Company had disappeared and the Engineers' preferred stock had been entirely retired, Engineers would liquidate in the same manner as that proposed for the liquidating holding companies over Gulf States Utilities Company and El Paso Electric Company (Texas).

Purchase of Preferred Stock

Stockholders have previously been advised of the order of February 15, 1943 of the Securities and Exchange Commission, denying the Company's application for permission to purchase 35,000 shares of its own preferred stock. In view of the closer approach of the market prices to the liquidation price of $100 per share and accrued dividends the Company filed a new application for permission to utilize $4,000,000 to purchase, on the New York Stock Exchange or at private sale, its preferred stock at not exceeding the liquidation price of $100 per share and accrued dividends. Such application was approved by the Securities and Exchange Commission on April 14, 1944.

Engineers' Exhibit No. 37-K (Cont'd)

Page 10:

Service Arrangements with Engineers Public Service Company, Inc.

The operating subsidiaries of Engineers Public Service Company (Delaware) obtain economies and more efficient service through group operation of certain essential services, including executive, advisory, financing, purchasing, sales promotion, insurance, accounting, statistical, tax and corporate. These services are furnished on a non-profit basis by Engineers Public Service Company, Inc. (New York), a mutual service organization wholly owned by the operating subsidiaries of Engineers Public Service Company. The mutual-service organization billed the operating and holding companies the amounts shown on page 36 of this report covering that portion of the cost of these services allocated to them. In 1943 the aggregate of the charges billed the operating subsidiaries was $162,340 (1942—$160,582), equivalent to 0.21% of the combined operating revenues. The charges for such services in 1943 which were allocated to the Engineers Company and to the El Paso holding company amounted to $176,280 (1942—$189,765), of which the Engineers Company paid $162,612 (1942—$177,562).

Page 13:

Merger Plan

The following is a brief summary of the merger plan as amended: (1) Engineers Public Service Company is to acquire from General Gas and Electric Corporation (Gengas) all of the outstanding shares of common stock of VPS and a claim by Gengas to $1,165,167 of escrowed funds for an aggregate price of $2,500,000 of which $1,500,000 is to be paid in installments contingent upon earnings over a maximum period of five years after the merger date. The shares of VPS common stock so acquired are to be converted into 150,000 shares of presently unissued

common stock of Vepco and the claim to $1,165,167 of escrowed funds is to be contributed to the capital of VPS; (2) each presently outstanding share of preferred stock of VPS, including all rights to accrued and unpaid dividends thereon to the effective date of the merger, is to be converted into one share of new $5 dividend preferred stock of Vepco, and, in addition, the holder of each share of 7% preferred stock is to receive $24.50 in cash and the holder of each share of 6% preferred stock is to receive $19.00 in cash, with the further provision that the holder of each share of preferred stock of VPS is to receive additional cash in an amount equal to accrued dividends thereon from March 31, 1944 to the effective date of the merger; (3) each share of $6 dividend preferred stock of Vepco outstanding at the effective date of the merger is to be converted into one share of the Vepco new $5 dividend preferred stock; (4) Vepco is to sell $23,000,000 principal amount of new Series D 3% bonds and $9,000,000 principal amount of new 2¼%-2⅝% Serial one to ten year notes and call for redemption all of VPS presently outstanding bonds in the principal amount of $26,000,000 at 111⅛ and debentures in the principal amount of $10,500,000 at 104½ in each case with accrued interest to date of call; and (5) Engineers Public Service Company will contribute $2,500,000 in cash to the capital of Vepco.

Page 14:

Dividend Restrictions

There is a covenant in the merger agreement which provides that through October 1946, $55,000 per month of net income is not available for payment of dividends on the common stock and that an additional $75,000 per month for 120 months from the merger date will not be available for payment of dividends on the common stock. The aggregate amount of net income to be unavailable for common dividends pursuant to these covenants over a ten-year period is approximately $11,000,000.

Page 5:

ENGINEERS PUBLIC SERVICE COMPANY

Wilmington, Delaware,
April 16, 1945.

TO THE STOCKHOLDERS:

The gross revenues of the Company (the parent company) consisting of dividends and interest on securities owned were $3,979,300 in 1944, a decrease of $46,641 under 1943. Greater common dividends from subsidiaries offset most of the decline in revenues from miscellaneous investments caused by the sale of such securities. Both expenses and taxes increased slightly. These changes resulted in a decline of $73,039 in the balance for dividends and surplus. The purchase of preferred stock referred to hereinafter reduced preferred dividends by $80,195, leaving a balance applicable to common stock and surplus of $1,325,180 for the year, as compared with $1,318,024 in 1943. The latter two figures are equivalent to an earning of 69¢ per share of outstanding common stock in each of these years.

The balance of combined earnings of subsidiary companies, including the Virginia properties acquired by merger only from May 25, 1944, was $7,273,234 as compared with $5,702,373 in 1943, whereas the amount paid as common dividends to the parent company was $3,821,950 in 1944 and $3,681,357 in 1943. The difference represents the amounts retained in surplus of subsidiary companies and not declared out in the form of common dividends. Charter provisions and indenture covenants currently restrict payment of dividends of certain subsidiaries. Total consolidated earnings in 1944 applicable to securities held by Engineers were $7,430,583 as compared with $6,046,957 in 1943. After expenses, taxes, interest and preferred dividends, the balance of consolidated earnings applicable to the parent company's common stock was $4,776,464, or $2.50

per share, compared with $3,339,040, or $1.75 per share, in 1943. Approximately two-thirds of the $1,437,424 improvement during the year resulted from a reduction in Federal income taxes explained hereinafter under "Amortization of War Emergency Facilities".

Total taxes accrued in 1944 by the subsidiary companies, as shown by the income statement were $20,131,321 or 28% of combined operating revenues. Taxes contributed by this and other business enterprises owned by private security holders are a major source of revenue for the conduct of government. Under present war conditions these taxes have become so great that a large differential now exists between the cost of operation of such privately-owned business enterprises and the costs of operation of government and co-operatively-owned businesses, which are largely tax free. This differential presents, in effect a subsidy of such magnitude that the combined existence of private enterprise is threatened. Legislation should be enacted to require that all business, whether conducted by private owners, government or cooperatives, should bear equally the tax burden.

Dividends

Regular quarterly dividends have been paid on the preferred stocks of the Company during the year. No dividends were paid on the common stock, and, in the opinion of Directors, the payment of common dividends is presently inadvisable in view of the problems facing the Company, should the order of the Securities and Exchange Commission requiring disposition of all the assets of the Company except its interest in Virginia Electric and Power Company be sustained in the courts.

Pages 6-7:

Divestment Orders and Disposition of Properties

The Company and its subsidiaries have made several sales or contracts for sale of securities and properties since such divestment orders were issued:

Engineers' Exhibit 37-L (Cont'd)

In 1942 the Company's investment in The Western Public Service Company (Maryland) was sold. Prior to the sale the Company had transferred its Wyoming properties to The Western Public Service Company (Delaware), which is still owned by Engineers.

In 1942 a proceeding under Section 11(e) of the Public Utility Holding Company Act led to the recapitalization of Puget Sound Power & Light Company, which became effective September 13, 1943, and to final disposition of the Company's interest therein in February 1944.

In July 1943 the Company sold its investment in Baton Rouge Bus Company, Inc.

In August 1943 the Company sold its investment in The Key West Electric Company.

In the early fall of 1943 the Company negotiated a contract with the Mayor and City Council of the City of El Paso, Texas, subject to approval of the voters, for the sale of its investment in the El Paso property, but this contract was rejected by the voters in October 1943.

In December 1943 the transportation and bridge properties in El Paso, Texas and Juarez, Mexico, were sold.

In March 1944 the Company sold its remaining investment in the common stock of El Paso Natural Gas Company.

All of the above transactions have been previously reported to stockholders.

On December 16, 1944 El Paso Electric Company (Delaware) was liquidated and the preferred stockholders were paid the liquidation price of $100 per share and accrued dividends. This company was an intermediate holding company in the Engineers system which served no useful purpose after the sale, in December 1943, of its subsidiary

Engineers' Exhibit 37-L (Cont'd)

owning the transportation and bridge properties in Mexico. Engineers contributed to the Delaware Company $1,000,000 in cash to enable that company to pay off its preferred stock and, in connection with the final distribution, Engineers also assumed liabilities of $46,850. The remaining assets, primarily the common stock of El Paso Electric Company (Texas), were distributed to Engineers as the owner of 100% of the El Paso (Delaware) common stock.

The sales by Virginia Electric and Power Company of its transportation properties in Richmond and Norfolk and its remaining transportation properties comprising the urban transportation properties in and near Petersburg, Portsmouth and Newport News (including the capital stock of Citizens Transit Corporation, also serving the Newport News area) and the interurban transportation property between Richmond and Petersburg, were completed on December 29, 1944 and March 31, 1945, respectively, when these properties were transferred to the purchasers.

On April 25, 1945, the Company sold to Donner Estates, Inc., as the Representative of and acting for and on behalf of International Cancer Research Foundation, Union Trust Company of Pittsburgh, Trustee, and Wilmington Trust Company and Delaware Trust Co. as Trustees under certain trusts created by William H. Donner or members of his family, all the securities of Savannah Electric and Power Company owned by the Company, namely, 5,500 shares of First Preferred or Debenture Stock Series A and 133,146 shares of Common Stock, for a consideration of $3,387,500 in cash, subject to certain adjustments to the date of transfer. The cost of these securities to the Company was $3,165,965.

On March 5, 1945, the Company entered into a contract, with J. Leo Scanlon, to sell its entire interest in Missouri Service Company and Northern Kansas Power Company for a basic price of $750,000, subject to adjustment with the total consideration including adjustments not to exceed $850,000. The book cost to the Company of the

securities to be sold amounts to $1,094,119. A reserve was established in 1938 to cover the estimated loss from disposition of the Company's interest in these properties. The sale is subject to approval by the Securities and Exchange Commission.

Possible Plan for Further Disposition

If the outcome of the present litigation involving Section 11(b)(1) shall make it necessary or desirable to do so, it is hoped that it will be possible to develop a plan under Section 11(e) which will meet with the approval of the SEC under which Engineers' interest in Gulf States Utilities Company and El Paso Electric Company (Texas) would be distributed to its security holders through liquidating holding companies, the preferred stocks of which would be distributed to the preferred stockholders of Engineers and the common stocks of which would be distributed to the common stockholders of Engineers. The net income of such liquidating holding companies would be used exclusively for payment of preferred dividends and retirement of their preferred stock at $100 per share and accrued dividends. Any remaining smaller properties not sold, if the plan is allowed to become effective, would be disposed of when sales could be made on an advantageous basis and the proceeds therefrom would be devoted to the retirement of the preferred stock of the liquidating holding companies. When the preferred stocks of such holding companies had been entirely retired, the common stock of their subsidiaries would be distributed pro rata in liquidation to their common stockholders. Upon establishment of such liquidating holding companies the mutual service company, located in New York, would be dissolved. Engineers, as the parent of Virginia Electric and Power Company alone, would also proceed to liquidate in the same manner as proposed for the liquidating holding companies over Gulf States Utilities Company and El Paso Electric Company when the tax ad-

Engineers' Exhibit 37-L (Cont'd)

vantages of retaining such relationship were deemed no longer of present or prospective value.

Purchase of Preferred Stock

On April 14, 1944 the SEC approved the Company's application to utilize $4,000,000 for the purchase of shares of its preferred stock at not exceeding $100 per share. All preferred stockholders were mailed notice of this step, including a copy of the Findings and Opinion of the SEC. The Company purchased 12,050 shares of $5 Dividend Stock, 8,640 shares of $5.50 Dividend Stock and 4,870 shares of $6 Dividend Stock, at a total cost of $2,532,099, before market prices moved beyond $100. In December 1944 the Company asked the SEC to extend the order permitting such purchase for another four months and the SEC has extended the terms of the order now in effect without modification, pending further order of the Securities and Exchange Commission.

Page 9:

Amortization of War Emergency Facilities

During the period of the war emergency, subsidiary companies have been granted certificates of necessity in the estimated aggregate amount of approximately $12,300,000. These certificates permit the companies to claim the cost of such additions as deductible for Federal income tax purposes over a sixty-month period (or, in the event of an earlier termination of the emergency, in a lesser period) in lieu of normal depreciation. As a result Federal income and excess profits taxes were reduced $1,067,652 in 1944 and $104,524 in 1943. Such reduction, based upon present tax rates and with all of such facilities in service, will amount to about $1,700,000 annually during the five-year amortization period.

Engineers' Exhibit 37-L (Cont'd)

Pages 9-10:

Service Arrangements with Engineers Public Service Company, Inc.

The operating subsidiaries of Engineers Public Service Company (Delaware) obtain economies and more efficient service through group operation of certain essential services, including executive, advisory, purchasing, sales promotion, insurance, accounting, statistical, tax and corporate. These services are furnished on a non-profit basis by Engineers Public Service Company, Inc. (New York), a mutual service organization wholly owned by the operating subsidiaries of Engineers Public Service Company. The mutual service organization billed the operating and holding companies the amounts shown on page 32 of this report covering that portion of the cost of these services allocated to them. In 1944 the aggregate of the charges billed the operating subsidiaries was $162,647 (1943—$162,340), equivalent to 0.23% of the applicable operating revenues. The charges for such services in 1944 which were allocated to the Engineers Company and to the El Paso holding company amounted to $171,215 (1943—$176,280), of which the Engineers Company paid $161,384 (1943—$162,612).

Reserves

It is the policy of your Company to have its subsidiaries maintain adequate reserves for retirements and replacements and for other purposes. The combined reserves and surplus of the subsidiaries of your Company as of February 28, 1926, amounted to 80% of the annual gross earnings and 16% of the book value of the properties. In view of the excellent physical condition in which the properties have been maintained it is believed that these reserves are ample.

Engineers' Exhibit 37-N (Cont'd)

Page 7:

ENGINEERS PUBLIC SERVICE COMPANY

Wilmington, Delaware,

February 25, 1927.

TO THE STOCKHOLDERS:

Your Company is a public utility holding company. Its purposes are twofold: first, as to the public served, to improve and develop the service in the territories occupied by its subsidiaries; and second, as to the investing public, to offer the opportunity, through purchase of its securities, to participate in an investment which, through diversification, has greater stability than the same investment in a single property. Common control through a holding company makes possible the raising of new capital in adequate amounts when needed for the development of the public service, and, through breadth of view and experience, makes for sound engineering and economical operation and the bringing of good service to many communities which without the holding company's backing would have inferior service. The earnings of Engineers Public Service Company proper are derived solely from dividends on stocks owned and from incidental interest on its surplus funds.

Page 8:

Since the formation of your Company eight companies underlying its present subsidiaries have been eliminated and arrangements were inaugurated in 1926 looking toward the elimination of three more of the companies shown in the Chart. It is expected that this simplification of the corporate arrangement will be completed in 1927.

Page 9:

The dividend and interest earnings of Engineers Public Service Company proper were approximately the same as

Engineers' Exhibit 37-N (Cont'd)

its own requirements for preferred dividends, operating expenses and taxes. All further earnings were left for investment in the property of subsidiaries.

Page 11:

Capitalization

The details of the capitalization of the Engineers Public Service Company and its subsidiaries are set forth in Financial and Statistical Data Pages 17 and following. Summarized, these are as follows, market values where used being closing prices December 31, 1926:

	Net Amount Outstanding	Per Dollar of Gross
Bonds and Coupon Notes of subsidiaries at face value	$ 59,939,000	$2.25
Preferred Stocks of subsidiaries at par	22,123,200	.83
Common Stocks of subsidiaries in public hands at book value	1,250,126	.05
Engineers Public Service Company Preferred at liquidation value	30,501,800	1.14
Engineers Public Service Company Common at market	17,234,003	.65
	$131,048,129	$4.92

Reserves and Surplus

It is the policy of your Company and its subsidiaries to maintain adequate reserves for replacements and retirements and surplus. These reserves and surplus are reinvested in the property. During the year 1926 $3,391,455 from earnings was reinvested in the properties of the subsidiary companies. The combined reserves and surplus of your Company and its subsidiaries as of December 31, 1926, amounted to 72% of the annual gross earnings or 14.5% of the book values of the properties. In addition the properties have been maintained in excellent physical condition, 9.0% of the gross earnings having been expended

ENGINEERS PUBLIC SERVICE COMPANY

Wilmington, Delaware,
February 16, 1928.

TO THE STOCKHOLDERS:

Your Company is a public utility holding company. Its purposes are twofold: first, as to the public served, to improve and develop the service in the territories occupied pied by its subsidiaries; and second, as to the investing public, to offer the opportunity, through purchase of its securities, to participate in an investment which, through diversification, has greater stability than the same investment in a single property. Common control through a holding company makes possible the raising of new capital in adequate amounts when needed for the development of the public service, and, through breadth of view and experience, makes for sound engineering and economical operation and the bringing of good service to many communities which without the holding company's backing would have inferior service. The earnings of Engineers Public Service Company proper are derived solely from interest and dividends on securities of subsidiaries owned and from incidental interest on its surplus funds.

Page 11:

Reserves and Surplus

It is the policy of your Company and its subsidiaries to maintain adequate reserves for replacements and retirements and surplus. These reserves and surplus are reinvested in the property. During the year 1927 $3,518,403

Engineers' Exhibit 37-O (Cont'd)

from earnings was reinvested in the properties of the subsidiary companies. The combined reserves and surplus of your Company and its subsidiaries as of December 31, 1927, amounted to 72% of the annual gross earnings, or 14.1% of the book values of the properties. In addition the properties have been maintained in excellent physical condition, 8.1% of the gross earnings having been expended in 1927 for maintenance, analysis of which is shown on page 28.

Page 5:

ENGINEERS PUBLIC SERVICE COMPANY

Wilmington, Delaware,
February 21, 1929.

TO THE STOCKHOLDERS:

Your Company is a public utility holding company. Its purposes are twofold: first, as to the public served, to improve and develop the service in the territories covered by its subsidiaries; and, second as to the investing public, to offer the opportunity, through purchase of its securities, to participate in an investment which, through diversification, has greater stability than the same investment in a single property. Common control through a holding company makes possible the raising of new capital in adequate amounts when needed for the development of the public service, and, through breadth of view and experience, makes for sound engineering and economical operation and the bringing of good service to many communities which without the holding company's backing would have inferior service. The earnings of Engineers Public Service Company proper are derived solely from interest and dividends on securities of subsidiaries owned and from incidental interest on its surplus funds.

Your Company made notable progress during 1928, showing a good increase in gross earnings and a marked decrease in operating ratio, due mainly to economies realized in the operation of new power stations. The three outstanding events of the year were the replacement of the $7 Dividend Preferred Stock of your Company with $5 Dividend Convertible Preferred Stock, the commencement of dividends on its Common Stock and the acquisition of control of Puget Sound Power & Light Company, which serves the greater part of western Washington with electric light

Engineers' Exhibit 37-P (Cont'd).

and power. These items are discussed more fully later on in the report.

Pages 6-7:

Dividends on Common Stock

With the increase in earnings and surplus of your Company the Directors announced last fall a dividend policy for the Common Stock. In accordance with this policy, an initial quarterly cash dividend of $.25 per share was paid on January 2, 1929, and the second quarterly dividend of $.25 per share and the initial semi-annual stock dividend of 2/100ths of a share of Common Stock per share have been declared payable April 1, 1929.

Facilities have been provided so that Stockholders who receive their stock dividends wholly or partly in scrip can either buy or sell scrip to place their holdings on a full share basis. This is to the advantage of the Stockholders, since no dividends are paid on scrip certificates. Full information may be obtained from Stone & Webster, Inc., Transfer Agent, 49 Federal Street, Boston, Massachusetts, which handles the purchase and sale of scrip certificates of your Company.

Financing

The improvement in earnings and credit position of your Company made it possible in March to take advantage of the excellent market for investment securities then existing (the preferred stock index was then at the highest point on record) to replace the $7 Dividend Preferred Stock with a new issue. There was sold for this purpose 320,000 shares of $5 Dividend Convertible Preferred Stock carrying the right of conversion into 532,000 shares of Common Stock at various rates (set forth in detail on page 26). At the same time 100,000 shares of Common Stock were sold to raise the balance of funds required for this refinancing. These capital changes resulted in an immediate reduction in preferred dividend requirements of over $580,000 a year and the conversions of the $5 Dividend Convertible Pre-

Engineers' Exhibit 37-P (Cont'd)

ferred Stock completed through January, 1929, effected further reductions in preferred dividend requirements amounting to $600,000 a year. These changes have also benefited the Company by increasing its equity base, so that in the future, senior financing, when needed, may be undertaken more advantageously.

In October your Company sold a new issue of $5.50 Cumulative Dividend Preferred Stock with Common Stock Purchase Warrants attached (as more fully described on page 27), primarily to finance the purchase of 300,000 shares of Junior Preferred Stock of Puget Sound Power & Light Company, in connection with the acquisition of control of that company. Preferred Stock of this same series (with similar warrants attached), and Common Stock, was issued in exchange for Common Stock of the Puget Sound Company. Through this sale and exchange, a total of 197,993 shares of $5.50 Cumulative Dividend Preferred Stock were outstanding as of December 31, 1928.

The issue of Common Stock during the year is shown in the following table:

Common Shares outstanding December 31, 1927		797,239 9/12
Issued in exchange for subsidiary common stocks, including Scrip	234,808 3/12	
Sold for cash March 29, 1928	100,000	
Issued upon conversion of $5 Dividend Convertible Preferred Stock	131,842	
Issued upon exercise of Option Warrants	6,957	473,607 3/12
		1,270,847
Scrip outstanding (in whole shares)		226
Common Shares outstanding December 31, 1928		1,270,621

Capitalization

The details of the capitalization of Engineers Public Service Company and its subsidiaries are set forth in the Financial and Statistical Data, pages 20 and following.

Engineers' Exhibit 37-P (Cont'd).

Summarized, they are as follows:

	Net Amount Outstanding	% of Total
Bonds and Coupon Notes of Subsidiaries at face value	$115,532,500	38.6
Notes Payable	9,395,370	3.1
Preferred Stocks of subsidiaries at par or book value	64,375,752	21.5
Common Stocks of subsidiaries in public hands at book value	1,470,858	.5
Engineers Public Service Company Preferred at liquidation value	45,281,300	15.1
Engineers Public Service Company Common at market December 31, 1928	63,531,050	21.2
	$299,586,830	100.0

Reserves and Surplus

It is the policy of your Company and its subsidiaries to maintain adequate reserves for replacements and retirements and surplus. These reserves and surplus are reinvested in the property. During the year 1928, $6,089,465 from earnings was reinvested in the properties of the subsidiary companies. The combined reserves and surplus of your Company and its subsidiaries as of December 31, 1928, amounted to 70.4% of the annual gross earnings or 12.4% of the book values of the properties. During 1928, 17.8% of the gross earnings was expended for maintenance or set aside for retirements and the properties have been maintained in excellent physical condition. All of the above figures include Puget Sound Power & Light Company, as of December 31, 1928, or for the full year 1928.

Pages 15-17:

Puget Sound Power & Light Company

Control of this company was acquired in December 1928 through the acceptance by a large majority of its common stockholders of the offer to exchange each of their shares

Engineers' Exhibit 37-P (Cont'd)

for ½ share of $5.50 Cumulative Dividend Preferred Stock with Common Stock Purchase Warrant attached and 1¼ shares of Common Stock of your Company, and through the purchase by Engineers at $25 per share of 300,000 shares of Junior Preferred Stock of Puget Sound Power & Light Company.

This company does the greater part of the commercial electric light and power business in western Washington, including the cities of Seattle, Tacoma, Bellingham, Everett, Bremerton, Wenatchee and Olympia. This rapidly growing territory is rich in timber and in agricultural resources, embracing widely diversified industries. The company (through subsidiaries or directly) also furnishes transportation, gas, water and other miscellaneous services at various locations in its territory.

Over 80% of the company's generating capacity is hydro-electric and power sites are owned which are capable of considerable further development to meet the growing demand for power in this district.

The growth of earnings of the electric department of the Company has been impressive; they have increased on the average more than 13% compounded annually for the last ten years. This excellent growth is in considerable measure due to the active and progressive work the company has been doing in the development of its business. This was one of the important features recognized in the award, in 1928, of the Charles A. Coffin gold medal, mentioned previously in the report. The Puget Sound Company has made the greatest proportionate development in rural electrification of any similar company in the United States in having electrified 63% of the farms in the territory served by its lines.

A comparison of the consolidated gross earnings in 1928 with those of 1927 shows that light and power earnings, which constitute 76.4% of the total, increased 13%. Transportation earnings, which represent but 14.4% of the consolidated gross, show a decrease of 35%; this, however, was

due largely to the elimination from the system at the end of 1927 of a substantial part of the transportation properties. The combined balance available for reserves, retirements and common dividends increased 28.7%.

Reductions in rates have been announced as follows: effective January 1, 1929, an optional residential rate of the promotional type to develop a greater use of domestic power, cooking and lighting service; and, effective February 1, 1929, a reduction of from ½¢ to 1¢ per Kwh. in the primary rate for residential and commercial customers in all territory served by the company outside the city limits of Seattle.

The net increase in plant of this company amounted to $4,351,000, the major part of which was for extensions of lines to serve new customers.

During 1928, $10,000,000 7% Prior Preference Stock was called for redemption or exchanged through the issue of 110,000 shares of $5 dividend Prior Preference Stock. 22,000 shares of $6 dividend Preferred Stock were issued for sale locally. At the end of 1928 there were 10,033 stockholders in the Puget Sound district holding 137,231 shares.

The company's construction program for 1929 will require an expenditure of approximately $9,000,000. Of this amount about $5,000,000 is required for completion of a new 35,000 Kw. steam power plant which was started in the fall of 1928 to care for the company's rapidly increasing load. Of the remainder, $3,300,000 will be required for extensions to the transmission and distribution system to serve new customers and to make necessary improvements and additions to existing facilities to care for increasing load from present customers.

Page 5:

ENGINEERS PUBLIC SERVICE COMPANY

Wilmington, Delaware,
February 20, 1930.

TO THE STOCKHOLDERS:

Your Company is a public utility holding company. Its purposes are two-fold: first, as to the public served, to improve and develop the service in the territories covered by its constituent companies; and second, as to the investing public, to offer the opportunity, through purchase of its securities, to participate in an investment which, through diversification, has greater stability than the same investment in a single property. Common control through a holding company makes possible the raising of new capital in adequate amounts when needed for the development of the public service, and, through breadth of view and experience, makes for sound engineering and economical operation and the bringing of good service to many communities which without the holding company's backing would have inferior service. The earnings of Engineers Public Service Company proper are derived solely from interest and dividends on securities of constituent companies owned and from incidental interest on its surplus funds.

Your Company directly controls nine companies through the ownership of nearly 99% of their total common shares and, in some cases, varying amounts of their preferred stocks. These security holdings are tabulated on page 25. The corporate relationship of Engineers Public Service Company and constituent companies is shown on page 30.

Pages 6-8:

Value of Diversity

The experience of the year has demonstrated in a striking way the value of diversity in stabilizing an equity

investment. As indicated in the discussion under that company, the net earnings of the Puget Sound Power & Light Company, which represents about one-third of the Engineers group, not only did not gain during the year but actually decreased about $200,000 below those of the preceding year, due to the effect of an unprecedented drought in the Pacific Coast territory. On the other hand, the remaining constituent companies of the Engineers group showed a gain in net earnings of $1,820,000 over the previous year, so that in spite of the relatively unfavorable results shown by Puget Sound, Engineers as a whole showed for the year a gain of about 19% in the earnings per share for its common stock. The point is stressed in this year's report to indicate that the value of diversity to our common stockholders is not merely theoretical, but very practical.

Dividends on Common Stock

Earnings of your Company have fully justified the continuance of the common dividend payments (inaugurated January 2, 1929) at the annual rate of $1.00 per share, plus 4% in stock (4/100ths of a share per share). This stock dividend is charged against earned surplus at $10 per share, which is approximately one-third of the present combined capital per share, leaving in earned surplus an amount which may be used for future dividends without further earnings.

Facilities have been provided so that Stockholders who receive their stock dividends wholly or partly in scrip can either buy or sell scrip to place their holdings on a full share basis. This is to the advantage of the Stockholders, since no dividends are paid on scrip certificates and since the scrip certificates now outstanding become void after April 1, 1935. Full information may be obtained from Stone & Webster, Inc., Transfer Agent, 49 Federal Street, Boston, Massachusetts, which handles the purchase and sale of scrip certificates of your Company.

Engineers' Exhibit No. 37-Q (Cont'd)

Sale of Stock to Employees

In August your Company instituted a plan for the sale of its common stock at $50 per share on a time payment basis to the employees of the constituent companies of Engineers Public Service Company. This price was about $22 below the then market price for the stock. The amount to which any employee could subscribe was limited to one share for each $300 of annual salary. Under this plan over 4,000 employees, or about 44% of the total, subscribed to more than 18,000 shares.

Subsequent to the inauguration of this plan, the stock market broke seriously, so that this stock could be bought in the open market at a lower price than the subscription price of $50 per share provided therein. In order to protect the employees in this matter, the Company purchased in the open market sufficient stock to cover their subscriptions at a price of approximately $40 a share.

Sale of Stock to Stockholders

Early in the year your Directors felt it desirable to increase the equity base of the financial structure of your Company by the sale of common stock under rights to Stockholders at a price below the prevailing market price. Accordingly, new common stock was offered to all Stockholders at $42.50 per share in the ratio of 1 new share for each 10 shares held of common stock and $5.50 Cumulative Dividend Preferred, 1½ new shares for each 10 shares held of $5 Dividend Convertible Preferred and ½ new share for each 10 Option Warrants held, all to holders of record February 14 for subscription on or before March 15. No other financing was undertaken by your Company during the year. Option Warrants representing 117,416 shares were exercised, bringing in over $3,000,000. Financing of constituent companies is discussed later in this report.

The issue of Common Stock during the year is shown in the following table:

Engineers' Exhibit No. 37-Q (Cont'd)

Common Shares outstanding December 31, 1928 (Including 226 shares in Scrip)		1,270,847
Issued in exchange for constituent companies' common stocks, including Scrip	3,631	
Sold in connection with offering to Stockholders, March, 1929	197,911	
Issued upon conversion of $5 Dividend Convertible Preferred Stock	162,738	
Issued upon exercise of Option Warrants	117,416	
Issued in payment of Stock Dividends, including Scrip	63,969.72	
	545,665.72	
Less Scrip purchased and cancelled	1.47	545,664.25
Common Shares outstanding December 31, 1929 (Including 2,440.25 shares in Scrip)		1,816,511.25

Capitalization

The details of the capitalization of Engineers Public Service Company and its constituent companies are set forth in the Financial and Statistical Data, pages 22 and following.

Summarized, they are as follows:

	Net Amount Outstanding	% of Total
Constituent Companies		
Bonds and Coupon Notes at face value	$125,251,000	41.3
Notes Payable	4,690,275	1.5
Preferred Stocks at par or paid in value	63,374,200	20.9
Common Stocks in public hands at book value	891,313	.3
Total Constituent Companies	$194,206,788	64.0
Engineers Public Service Company		
Preferred at $100 per share	$ 35,519,000	11.7
Common at market December 31, 1929	73,923,393	24.3
Total Engineers Public Service Company	$109,442,393	36.0

Engineers' Exhibit No. 37-Q (Cont'd)

Reserves and Surplus

It is the policy of your Company to maintain adequate reserves for replacements and retirements and surplus. These reserves and surplus are reinvested in the property. During the year 1929, $5,666,659 from earnings was reinvested in the properties of the constituent companies. The combined reserves and surplus of your Company and constituent companies as of December 31, 1929, amounted to 71.1% of the annual gross earnings or 12.5% of the book values of the properties. During 1929, 16.9% of the gross earnings was expended for maintenance or set aside for retirements; and the properties have been maintained in excellent physical condition.

Carrying the record back as far as figures are available on each of the companies of the Engineers group, a period averaging 24.6 years, a total of 10.18% of the entire gross earnings over this period has been expended for maintenance and, in addition, during the same period, a total of 10.27% of these gross earnings has been set aside for reserves or retained as surplus.

Pages 17-18:

Puget Sound Power & Light Company

The progress made by this company during the past year reflects the general condition of prosperity and growth of the territory served. Washington crops for 1929 show an increase of over 10% in value as compared with 1928, and bank clearings in the leading cities of the Pacific Northwest for 1929 established new high records. Gross earnings of the company showed an increase of 8.1% over the previous year. Increased expenses due to an abnormal water shortage decreased net earnings 3.1%. The period from August 1928 to the middle of December 1929 was the driest on record since the establishment of the local Weather Bureau Station. The drought was particularly acute in the fall of 1929, just before it was broken. The new

Engineers' Exhibit No. 37-Q (Cont'd)

Shuffleton power plant of 40,000 kilowatts capacity, which was put in service in September, enabled the company to meet the entire power requirements of its customers at all times during the drought, and this dependability has occasioned much favorable comment. With the return of normal water conditions the showing of this company should be materially improved.

A reduction of one-half cent per kilowatt hour in the rate for industrial power became effective in September, and a general reduction of one-half cent per kilowatt hour in primary rates to all its residential and commercial lighting customers outside the City of Seattle was announced on December 19, 1929, to take effect March 1, 1930. These reductions were made possible by the increased use of electric service and will, in turn, stimulate even greater consumption. Over one-quarter of the residential customers of this company have electric ranges and the use of electric service per home customer, amounting to an average of 954 kilowatt hours annually, is more than twice the average for the United States and ranks among the highest of the utilities of the country.

The total increase during 1929 in the plant account of the combined properties amounted to $11,447,000 the largest item of which was for the new Shuffleton steam power plant and for extensions of lines to serve new customers. Retirements amounted to $1,149,000, leaving a net increase in plant account of $10,298,000.

The Seattle Electric Company Consolidated and Refunding 22 Year 5% Gold Bonds due August 1, 1929 in the amount of $4,824,000 were retired at maturity. In October there were issued an additional $8,000,000 face value of First and Refunding 5½% Bonds. An additional 1,000 shares of $6 Dividend Preferred Stock also were issued for sale locally. At the end of 1929 there were 11,483 stockholders in the Puget Sound district holding 151,016 shares. In addition $4,306,900 of Coupon Notes were held locally.

Engineers' Exhibit No. 37-Q (Cont'd)

The company's construction program for 1930 calls for an expenditure of over $12,000,000. Of this amount $1,700,000 is required for completion of the second 35,000 kw. unit of the Shuffleton steam power plant and $6,700,000 for initial expenditures on the Rock Island hydroelectric project on the Columbia River near Wenatchee, with an installation of 80,000 h.p. to be available in 1932 and a proposed maximum capacity of 200,000 h.p. Of the remainder, $3,100,000 will be required for extensions to the transmission and distribution system to serve new customers and to make necessary improvements and additions to existing facilities to care for the increasing load from present customers.

Page 19:

Management

The operation of the constituent companies of the Engineers group is under the supervision of Stone & Webster Service Corporation.

AUDITORS' CERTIFICATE

We have audited the accounts of the Engineers Public Service Company for the year ended December 31, 1939, and we have reviewed the reports for that year submitted to the Company by the directly controlled companies.

We certify that the balance sheet and income statement of the holding company as published herewith are in accordance with the books and, in our opinion, set forth correctly the financial position of the Engineers Public Service Company as at December 31, 1929, and the results of its operations for the year 1929, and that the consolidated balance sheet and consolidated income account of the Engineers Public Service Company and constituent companies as published herewith have been correctly prepared from the records of the Company and the reports submitted to it by the directly controlled companies.

(Signed) LYBRAND, ROSS BROS. & MONTGOMERY,
Accountants and Auditors.

New York, February 11, 1930.

ENGINEERS PUBLIC SERVICE COMPANY

Wilmington, Delaware.

February 19, 1931.

TO THE STOCKHOLDERS:

Your Company is a public utility holding company. Its purposes are two-fold: first, as to the public served, to improve and develop the service in the territories covered by its constituent companies; and second, as to the investing public, to offer the opportunity, through purchase of its securities, to participate in an investment which, through diversification, has greater stability than the same investment in a single property. Common control through a holding company makes possible the raising of new capital in adequate amounts when needed for the development of the public service, and, through breadth of view and experience, makes for sound engineering and economical operation and the bringing of good service to many communities which without the holding company's backing would have inferior service. The earnings of Engineers Public Service Company proper are derived solely from interest and dividends on securities of constituent companies owned and from incidental interest on its surplus funds.

Your Company directly controls nine companies through the ownership of over 99% of their total common shares and, in some cases, varying amounts of their preferred stocks. These security holdings are tabulated on page 25. The corporate relationship of Engineers Public Service Company and constituent companies is shown on page 31.

Engineers' Exhibit No. 37-R (Cont'd)

Pages 6-7:

Dividends on Common Stock

Beginning with the quarterly dividend which was paid July 1, 1930, the rate of dividends was changed from the old basis of $1.00 in cash plus 4% in stock to $2.40 in cash annually.

Acquisition by Stone & Webster, Incorporated

On February 11, 1930, an offer was made by Stone & Webster, Incorporated, to acquire the common stock of your Company on the basis of 6 shares of Stone & Webster capital stock for each 10 shares of Engineers common stock. Through this offer and through purchases in the open market, Stone & Webster, Incorporated, obtained and controls over 90% of the common stock of your Company.

Capitalization

The details of the capitalization of Engineers Public Service Company and its constituent companies are set forth in the appendix to this report.

Summarized, they are as follows:

	Amount Outstanding	% of Total
Constituent Companies:		
Bonds and Coupon Notes at face value	$133,954,500	39.4
Notes Payable	6,498,075	1.9
Preferred Stocks at par or paid in value	72,462,109	21.3
Common Stocks in public hands at book value	773,233	.3
Total Constituent Companies	$213,687,917	62.9
Engineers Public Service Company:		
Preferred at $100 per share	$ 43,000,200	12.7
Common at market December 31, 1930	83,068,514	24.4
Total Engineers Public Service Company	$126,068,714	37.1

Engineers' Exhibit No. 37-R (Cont'd)

The issue of Common Stock during the year is shown in the following table:

Common Shares outstanding December 31, 1929 (Including 2,440.25 shares in Scrip)		1,816,511.25
Issued upon conversion of $5 Dividend Convertible Preferred Stock	300	
Issued upon exercise of Option Warrants	57,076	
Issued in payment of Stock Dividend, including Scrip	36,430.58	93,806.58
		1,910,317.83
Less Scrip purchased and cancelled		.83
Common Shares outstanding December 31, 1930 (Including 696 shares in Scrip)		1,910,317

Financing

In order to finance the proposed purchase of additional common stock of Puget Sound Power & Light Company and for other corporate purposes, your Company sold in October 75,000 shares of preferred stock bearing a $6 dividend rate. This sale of stock, together with money received on the exercise of option warrants at various times, was the only permanent financing done by your Company in 1930. Financing of constituent companies is discussed under the individual companies in succeeding paragraphs.

Reserves and Surplus

It is the policy of your Company to maintain adequate reserves for replacements and retirements and surplus. These reserves and surplus are reinvested in the property. During the year 1930, $4,833,818 from earnings was reinvested in the properties of the constituent companies. The combined reserves and surplus of your Company and constituent companies as of December 31, 1930, amounted to 70.9% of the annual gross earnings or 12.4% of the book values of the properties. During 1930, 15.7% of the gross

Engineers' Exhibit No. 37-R (Cont'd)

earnings was expended for maintenance and set aside for retirements; and the properties have been maintained in excellent physical condition.

Carrying the record back as far as figures are available on each of the companies of the Engineers group, a period averaging about 26 years, a total of 9.9% of the entire gross earnings over this period has been expended for maintenance and, in addition, during the same period, a total of 10.3% of these gross earnings has been set aside for reserves or retained as surplus.

Pages 15-19:

Puget Sound Power & Light Company

This company made substantial progress during the year in spite of unfavorable business conditions in the territory served which were particularly depressed during the last quarter. Lumber production decreased 25% for the year and the value of crops 29%. Gross earnings of the company increased 4%, largely due to the development of farm and residential business. Residential revenue increased more than 12% whereas industrial power revenue declined nearly 6%. Transportation earnings showed a slight increase over the previous year. Net earnings of the company increased over 15% in spite of the fact that this territory suffered another dry year. Precipitation at Seattle was 21.8 inches compared with 20.0 inches in 1929 and an average for a fifty year period of 34.5 inches. While the 1930 rainfall was only slightly greater than 1929, the flexibility of operation made possible with the large steam capacity in the new Shuffleton plant enabled the company to generate 77% of the total energy requirements in hydro-electric plants as compared with 67% in 1929. In this territory as in others served by the Engineers system, excellent progress was made in the development of residential business. The average use per residential customer was increased 17% over 1929, and the average rate paid by such customers decreased approximately 10%. A reduction of ½¢ to 1¢ per kilowatt hour in the primary rate for

Engineers' Exhibit No. 37-R (Cont'd)

residential and commercial service was made March 1, 1930 throughout the territory served by the company with the exception of the City of Seattle. 33% of the residential customers of the company own electric ranges and there is also large general use of electricity for refrigeration, water heaters and other heavy duty appliances.

For the year 1930, 80% of the earnings of the transportation department were derived from bus operation. The total transportation business constituted about 15% of the combined gross earnings of the company.

Total expenditures for construction during 1930 amounted to $14,122,000, the largest item of which was over $7,000,000 for carrying on work on the Rock Island Project on the Columbia River. Other large expenditures provided for completion of the second unit of the Shuffleton steam plant, improvements to substations and lines to provide increased capacity and for line extensions to serve new customers. Retirements amounted to $1,053,000, leaving a net increase in plant account for the year of $13,069,000.

In addition to its construction program, the Puget Sound company also had to finance maturities of funded debt amounting in total to over $6,000,000. To take care of these cash requirements the following securities were sold:

$3,000,000 10 year 5½% Gold Notes (Sold in the territory served)
$9,000,000 First & Refunding Series C 5% Bonds due 1950
19,000 shares Preferred Stock (Sold in the territory served)

This company has been very successful in the sale of securities to its customers, and at the end of 1930 there were over 14,000 customer security holders owning over 180,000 shares of preferred stock and $3,000,000 of notes.

Engineers' Exhibit No. 37-R (Cont'd)

For the purpose of simplifying the capital structure of this company, the Directors of Engineers offered, in effect, to exchange 300,000 shares of Junior Preferred owned by it for common stock. In order to make this exchange on a parity as to dividends, share for share, it was necessary to change the 202,829 common shares then outstanding into 811,316 common shares, which was authorized by the stockholders in December. It appeared desirable also to strengthen the equity portion of the Puget Sound company's capital structure. Accordingly, the Puget Sound directors offered 507,072 shares of common stock to common stockholders at $25 a share under rights calling for payment January 2, 1931, with the proviso that the Engineers Company should apply the entire issue of Junior Preferred at $25 per share toward its subscription for new common stock under rights accruing to it as owner of nearly 99% of the common stock. More than $5,100,000 of new money was thus invested in the property junior to all other securities, thereby greatly strengthening the position of the Preferred Stock and other senior securities.

In November the "District Power Bill" was passed by the voters of the State of Washington. This law provides that any political subdivision or part thereof may set up a "power district" and go into the power business, issuing bonds to cover the cost of the project. Previous to this time only cities and towns were enabled to do this. The two reasons which might interest a group of farmers to set up such a power district would be either inability to get electric service or unreasonable rates. Inasmuch as two-thirds of the farms in the area served by the Puget Sound company are already connected to its lines (compared with about 10% for the United States as a whole) and the further fact that the rural rates for this service are among the lowest in the country and lower than the corresponding rates of the much discussed Ontario Hydro-Electric System, it would seem that the Puget Sound company should have little to fear from this legislation.

Page 19:

El Paso Natural Gas Company

Your Company has negotiated contracts looking toward the possible purchase of the controlling interest in El Paso Natural Gas Company. This company now operates a 200 mile natural gas line from the Jal gas fields in the southeast corner of New Mexico westward to El Paso where its output is sold to wholesale consumers including the Rio Grande Power Station of El Paso Electric Company, the Nichols Copper refinery, the local gas distribution company and various industrial plants.

Page 5:

ENGINEERS PUBLIC SERVICE COMPANY

Wilmington, Delaware,

February 18, 1932.

TO THE STOCKHOLDERS:

Your Company is a public utility holding company. Its purposes are two-fold: first, as to the public served, to improve and develop the service in the territories covered by its constituent companies; and second, as to the investing public, to offer the opportunity, through purchase of its securities, to participate in an investment which, through diversification, has greater stability than the same investment in a single property. Common control through a holding company assists in the raising of new capital when needed for the development of the public service, and, through breadth of view and experience, makes for sound engineering and economical operation and the bringing of good service to many communities which, without the holding company's backing, would have inferior service. In the operation of your Company's properties the attempt is made to reap the maximum advantages outlined above and at the same time to preserve the benefits of close contact with the public served, by giving the local officers and employees the greatest possible freedom and autonomy in the administration of local affairs.

The earnings of Engineers Public Service Company proper are derived solely from interest and dividends on securities of constituent companies owned and from incidental interest on its surplus funds and investments.

Your Company directly controls ten companies through the ownership of over 99% of their total common shares and, in some cases, varying amounts of their preferred stocks. These security holdings are tabulated on page 17. The cor-

Engineers' Exhibit No. 37-S (Cont'd)

porate relationship of Engineers Public Service Company and its constituent companies is shown on page 23.

Page 6:

Reserves and Surplus

It is the policy of your Company to maintain adequate reserves for replacements and retirements, and surplus These reserves and surplus are reinvested in the property. During the year 1931, $5,797,593 from earnings was reinvested in the properties of the constituent companies. The combined reserves and surplus of your Company and constituent companies as of December 31, 1931, amounted to 74.5% of the annual gross earnings or 12.1% of the book values of the properties. During 1931, 14.9% of the gross earnings was expended for maintenance or set aside for retirements; and the properties have been maintained in excellent physical condition.

Carrying the record back as far as figures are available on each of the companies of the Engineers group, for a period averaging about 27 years, a total of 9.6% of the entire gross earnings has been expended for maintenance and, in addition, during the same period, a total of 10.2% of these gross earnings has been set aside for reserves or retained as surplus.

Page 7:

Supervision

On May 1 the supervision of the constituent companies of Engineers Public Service Company formerly provided by Stone & Webster Service Corporation, was taken over by Engineers Public Service Company, Inc., a supervisory company entirely owned by the constituent companies. The primary effect of the new arrangement was to place the supervision of Engineers' properties on a non-profit basis.

Puget Sound Power & Light Company

Business conditions in the territory were increasingly unfavorable during the year. The lumber industry, which normally provides 65% of the State's industrial payroll, produced 30% less lumber than in 1930. Due to a continuing decline in lumber prices the value of 1931 gross sales of lumber amounted to less than one-third of that for 1929. The value of all Washington crops decreased 25% from that of 1930 and 47% from that of 1929.

Combined gross earnings of the company decreased 8%. Electric department earnings decreased 4.6%, the 14% decrease in industrial and 2.7% decrease in commercial earnings being largely offset by the increase of 3.5% in farm and residential earnings. Transportation earnings, which decreased 17%, reflecting the depressed business conditions, amounted to only 13% of combined gross earnings and of these approximately 83% were derived from motor coach operation. Net earnings decreased only 6% from 1930. This excellent showing was the result of rigid economies practiced in all departments. Adequate rainfall made it possible to generate 89% of the company's energy requirements in its hydro electric power plants. The major contract for purchase of firm power was terminated during the year as the Rock Island Project will greatly augment the company's power supply. The interconnection is still maintained for the purchase and sale of surplus power when desirable.

Continued progress was made in the development of residential business and with one-third of the residential customers using electric cooking together with extensive use of electric refrigeration and water heating, the average use per residential customer has increased to 1,121 kwh. per year or nearly twice the national average. Reductions averaging 8% in the primary rates for residential and commercial service were made on March 1, effective throughout

the territory served by the company with the exception of the City of Seattle which was already enjoying the lower rates. A lesser reduction was made in the general power rate on November 1 in order to effect uniformity throughout the portion of the territory west of the Cascade Mountains.

Total expenditures for construction during 1931 amounted to $10,056,000, of which over $7,300,000, was expended on the Rock Island Hydro Electric Project on the Columbia River. The initial development of 80,000 horse power will be completed about the end of 1932. Expenditures amounting to $2,156,000 were made for improvement to sub-stations and lines to provide increased capacity and to serve new customers. Retirements amounted to $1,006,000 leaving net plant additions of $9,050,000 for the year.

On January 2 the capital structure of this company was simplified and strengthened by the extinguishment of the entire outstanding issue of 300,000 shares of Junior Preferred Stock owned by Engineers Public Service Company and by the sale of 507,072 additional shares of common stock. More than $5,100,000 of new junior money was thus invested in the property, thereby greatly strengthening the position of the Preferred Stock and other senior securities.

In addition to its construction program the Puget Sound company had to finance the maturity of $4,425,500 of Series B First and Refunding Mortgage 5% Gold Bonds which came due February 1. To meet this maturity and the requirements for construction, $9,000,000 of one year 4½% Secured Gold Notes, due Feb. 1, 1932, callable at 100 on or after August 1, were sold in January, when the market for long term securities was poor. In June $16,000,000 face value of First and Refunding Mortgage 4½% Gold Bonds Series D due 1950 were sold and part of the proceeds was used to retire the 4½% Secured Gold Notes which were redeemed August 1.

Engineers' Exhibit No. 37-T (Cont'd)

Pages 5-6:

ENGINEERS PUBLIC SERVICE COMPANY

Wilmington, Delaware,
February 16, 1933.

TO THE STOCKHOLDERS:

Your Company is a public utility holding company. Its purposes are two-fold: first, as to the public served, to improve and develop the service in the areas covered by its constituent companies and to furnish that service to its customers at the lowest reasonable cost; and second, as to the investing public, to offer the opportunity, through purchase of its securities, to participate in an investment which, through diversification, has less risk than investment in such properties individually. Common control through a holding company assists in the raising of new capital when needed for the development of the public service, and, through breadth of view and experience, provides sound engineering and economical operation, and a higher standard of service to many communities which, without the holding company's backing, would have inferior service.

You will be interested in the following approximate figures reviewing what your Company has done during its corporate life to finance the development of its constituent properties.

Since the organization of Engineers Public Service Company in 1925 there has been expended in cash on the physical properties of its constituent companies.....	$126,000,000
Of this amount there was furnished through investment of the retirement reserve and from earnings left in surplus of constituent companies, etc.....	$ 33,000,000

Engineers' Exhibit No. 37-T (Cont'd)

This left a balance to be provided for through the sale of securities of	$ 93,000,000
Of this balance the Engineers Public Service Company has itself furnished, principally from the proceeds of the sale of its own securities	$ 31,000,000
This left a balance representing the net cash raised by the sale to the public of securities of operating companies amounting to	$ 62,000,000

These figures indicate that of the total of $126,000,000 for construction purposes, only about one-half was raised by the sale to the public of securities of the operating properties. They also show that of the amount of $93,000,000 cash raised by new financing, 33% was furnished by Engineers Public Service Company itself. The major part of this 33% could not have been raised as advantageously by the individual companies on their own credit. The Engineers Company has thus throughout its corporate life maintained through its own credit a very substantial equity base for the senior securities of its subsidiaries issued during the period.

Your Company endeavors persistently to furnish to its operating properties the many benefits and services to be derived from centralized supervision and at the same time to preserve to the local officers and employees the greatest degree of autonomy and responsibility in the administration of the affairs of the operating companies in their charge.

The supervisory services are rendered at cost to the constituent companies through the medium of a supervisory organization, Engineers Public Service Company, Inc., the stock of which is wholly owned by the operating companies. From the nature of this setup, therefore, no profit accrues to your Company for the services so rendered.

The earnings of Engineers Public Service Company proper are derived entirely from interest and dividends on

securities of operating companies and from incidental interest on its surplus funds and investments.

Your Company controls directly ten companies through the ownership of over 99% of their total common shares and, in some cases, varying amounts of their preferred stocks. These security holdings are tabulated on page 17. The corporate relationship of Engineers Public Service Company and its constituent companies is shown on page 23.

Page 7:

Reserves and Surplus

It is the policy of your Company to maintain adequate reserves for replacements and retirements, and surplus which are reinvested in the property. The combined reserves and surplus of your Company and Constituent Companies as of December 31, 1932, amounted to 84.3% of the annual gross earnings or 12.1% of the book values of the properties. During 1932, 15.8% of the gross earnings was expended for maintenance or set aside for retirements, and the properties have been maintained in excellent physical condition.

Carrying the record back as far as figures are available on each of the companies of the Engineers group, for a period averaging about 28 years, a total of 9.3% of the entire gross earnings has been expended for maintenance and, in addition, during the same period, a total of 10.4% of these gross earnings has been set aside for reserves or retained as surplus.

Pages 11-12:

Puget Sound Power & Light Company

Business conditions in the Puget Sound territory continued to be very seriously depressed. The lumber industry, which normally provides more than half of the State's in-

dustrial payroll and in 1929 accounted for production valued at $215,000,000 did a business amounting to only about $30,000,000 during the past year. Other lines of business have been less seriously affected but the conditions brought about by the continuation of the depression and competition of goods manufactured in countries with depreciated currencies are serious.

Combined gross earnings of the company declined 14%. Electrical Department earnings, furnishing 82% of the total, declined 11%. Residential earnings were best maintained, recording a 5% decline against 10% for commercial and 19% for industrial classifications. Transportation earnings declined 34% and now furnish but 10% of the total gross earnings. Continuation of the program of rigid economy previously inaugurated produced drastic reductions in operating expenses for the year amounting to 21% of the previous year's total. This excellent showing was made in spite of the fact that only 1.5% of this company's 1931 generation was by steam, so that there was almost no saving in fuel costs resulting from lower output. Balance after operating expenses declined only 8%.

Notwithstanding this relatively good operating record it was necessary, first, to reduce the October 15th dividend payment on the Preferred Stock from $1.50 to $1.00, and, at the end of the year, to defer all dividends on the Prior Preferred and Preferred Stocks. These dividends are cumulative and must be paid in full before Common dividends may be resumed. The compelling factor requiring the reduction and elimination of these dividends while they were still earned was inability to finance the short term debt of the company. On December 31, 1932 the company had Notes Payable amounting to $3,227,714 and it also faced a maturity of underlying bonds of $1,924,000 on June 1, 1933. It had been expected that securities would be sold to discharge this floating debt and to provide for this maturity, and for use in this connection the Federal Power Commission authorized in October the issuance of $7,500,000 of

Engineers' Exhibit No. 37-T (Cont'd)

additional First and Refunding Mortgage Bonds; but investment markets have been in such condition that the necessary securities could not be sold on a reasonable basis.

The company has made continued progress in the simplification of its rate structures and in further reduction of its rates.

Additions to property during the year amounted to $2,482,000 in total, of which $1,547,000 was for the Rock Island Hydroelectric project on the Columbia River, which has now been completed. A picture of this development appears on Page 4. The balance of construction expenditures was almost entirely for improvements to the transmission and distribution system, to improve service and to build short extensions to connect new customers.

Retirements of property amounted to $710,000, leaving a net increase in Plant of $1,772,000.

Engineers' Exhibit No. 38.

MUDGE, STERN, WILLIAMS & TUCKER
20 Pine Street
New York

July 26, 1945

To the Board of Directors
ENGINEERS PUBLIC SERVICE COMPANY,
(Incorporated)
90 Broad Street,
New York City

Dear Sirs:

As you well know, on September 16, 1942, in proceedings under Section 11(b)(1) of the Public Utility Holding Company Act, the Securities and Exchange Commission entered an order in effect requiring your Company to divest itself of all of its public utility subsidiaries except Virginia Electric and Power Company and to cease engaging, through that Company, in the gas and transportation businesses. On appeal by your Company to the United States Court of Appeals for the District of Columbia, that court, in our opinion, set that order aside in its entirety on account of legal errors of the Commission and remanded the case to the Commission for further consideration in the light of its opinion. Both your Company and the Securities and Exchange Commission applied to the Supreme Court of the United States for writs of certiorari, which were granted and the case has been pending undecided in that court since June, 1944. For most of the period since that time, the case has been on a suspense list for lack of a quorum of the qualified Justices to decide the issues, some of the Justices having disqualified themselves on the basis of interest. Recently, due, I understand, to the waiver by the Chief Justice of his disqualification, we were advised that the case was set for argument on a definite day, namely,

Engineers' Exhibit No. 38 (Cont'd)

October 8, 1945. A few days ago, however, on account of the resignation from the Court of Justice Roberts, the Engineers Section 11 case has been again put on the suspense list for lack of a quorum. Accordingly, when that case will be argued and decided is again indefinite.

Meantime, your Company finds itself in a somewhat serious dilemma. When it could do so advantageously, it has, in view of that order of the Commission above mentioned and the provisions of the Act, been selling various of its properties until now there remains only three substantial utility properties, namely, Gulf States Utilities Company, El Paso Electric Company and Virginia Electric and Power Company. Due to the disposition of these other properties and the fact that your Company has not been paying dividends on its common stock, it is my understanding that it will find itself with approximately $14,000,000 of cash or its equivalent by the end of the present year. Under the Act, your Company is unable advantageously to invest this money in other utility properties, and although it has attempted to do so, has been unable to acquire in the market at $100 or less any appreciable amount of its preferred stock for retirement. With nothing or practically nothing, in the way of income, coming to your Company from this cash, and the continuation of the dividend requirements on the preferred stock, your Company obviously finds itself in a situation which it cannot afford to let continue very long.

Under these circumstances, your officers have taken up informally with the SEC and from time to time considered with me a solution of the problem. Various plans have been under consideration as to which your President has reported to you from time to time.

In its case before the Supreme Court above mentioned, your Company is, among other things, contesting the constitutionality of the Act under the Commerce Power of the Federal Government. Substantially the same attack is being made in two other cases similarly pending before the Su-

Engineers' Exhibit No. 38 (Cont'd)

preme Court. Although from the start I have felt that the Act was invalid under the Commerce Power and should be so held, I have little hope as the Supreme Court is now constituted and in the present state of administration of the Act, that a favorable opinion of the Court to that effect can be expected. Other constitutional questions are raised in the case under the Fifth Amendment but here again I have no confidence of success. Also, various points of interpretation are raised in the case as to some of which I have more hope of success, but since even if we won on these points in the Supreme Court, the case would be remanded to the Commission for further hearing and they all depend largely on factual issues over which the Commission, if there is any substantial evidence, has the final say, I have little confidence that any permanent relief would be obtained on the interpretation points. The most those points would produce it seems to me is delay.

Practically, therefore, your Company is faced with the necessity sooner or later of complying with the Act, which means that it will have, in some manner, to dispose of its interests in both Gulf States and El Paso. Your Company was organized for the purpose of bringing together under one ownership various scattered public utility companies. If Gulf States and El Paso are to be disposed of, only Virginia Electric and Power Company would remain. Accordingly, the functional reason for the existence of your Company would, under these circumstances, have ceased to exist and there would seem to be no logical reason for incurring the expense of the maintenance of your Company if it is to control only Virginia Electric and Power Company. Thus the plans which have been under consideration have had as one objective the complete liquidation and dissolution of your Company. Faced as your Company is with the practical difficulty with respect to dividends on its outstanding preferred stock and to accumulation of substantial amounts of cash, it seems to me that the pending Supreme Court case, furnishing as it does so little hope of ultimate

Engineers' Exhibit No. 38 (Cont'd)

success, should not stand in the way of carrying out in the near future a plan which will have as its ultimate objective the complete liquidation and dissolution of your Company.

The most serious problem confronting your Company in this connection involves the question of the basis on which its outstanding shares of preferred stock shall be retired. There are three series of preferred stock, namely, $5 dividend, $5.50 dividend and $6 dividend stock. Under the provisions of the Company's charter, in case of involuntary liquidation of your Company, the three series are entitled to a preference over the common stock of $100 per share and accrued dividends. If the liquidation be voluntary, however, the $5 stock is entitled to a premium of $5 per share and the $5.50 and $6 preferred stocks are entitled to a premium of $10 per share. Naturally, therefore, the questions arises as to whether the preferred stock is to be retired on the basis of $100 and accrued dividends or whether the premiums are payable thereon.

Although, as will appear, I am unable with assurance to advise you that the premium is not payable, I have no hesitancy in advising you that, as directors, I think you should, for your own protection, take the position that the premiums are not payable. This is so because if you should, as a Board, voluntarily pay the premiums and it should later, as the law on the subject develops further, be determined that the premiums were not payable, it is possible that you might incur liability to the common stockholders on the ground of waste of assets.

On the question of whether legally the premium is payable, it is necessary, I think, for me to review for you the present state of the law.

For the first time, in January of this year, the Supreme Court of the United States had before it, in *Otis v. Securities and Exchange Commission,* decided January 29, 1945, Supreme Court Reporter, Vol. 65, No. 7, page 483, a case which involved the effect of a preferred stock charter preference over the common stock on liquidation and dissolution

Engineers' Exhibit No. 38 (Cont'd)

under a simplification proceeding arising under Section 11(b) (2) of the Act. The case was decided by a 5 to 3 decision, written for the court by Justice Reed, with a strong dissenting opinion by the Chief Justice in which Justices Roberts and Frankfurter concurred.

Prior to the decision of that case, both the Commission and the lower federal courts had taken the position that when companies were being liquidated under the impact of the Act, the senior securities would be paid off at their face amount or on an involuntary liquidation basis, plus accrued interest or dividends, without the payment of premiums which might otherwise have to be paid if the liquidation were voluntary or if the senior securities were paid off at their redemption prices.

While I do not deny the fact that the opinion of the Court in the *Otis* case probably gives to the preferred stockholders of Engineers who feel they should be paid the premiums some basis for argument, the opinion must necessarily be interpreted in the light of the facts there involved and when it is so interpreted, personally I think the opinion affords only slight comfort to such stockholders.

The facts involved in the *Otis* case were as follows:

The Commission had ordered the United Power & Light Company (Power) to dissolve because it found it was an intermediate holding company in violation of the great-grandfather clause. Dividends were in arrears on the preferred stock to the extent of $64.50 per share, and the total priority of the preferred stock when these accumulated dividends were taken into account amounted to $98,706,000. Power's total gross assets had a value of only about $81,000,000 and, therefore, were less than the preferred stock preference even though all of the assets were given to the preferred stock. The principal assets of Power were shares of common stock of United Light & Railways Company (Railways).

Power filed a Section 11(e) Plan which provided for an allocation of the Railway's common stock on the basis of

Engineers' Exhibit No. 38 (Cont'd)

94.52% to Power's preferred stockholders and 5.48% to Power's common stockholders. The Commission found this Plan under the provisions of Section 11(e) to be "fair and equitable" and the Supreme Court sustained the Commission's finding.

For your consideration of the effect of this case on your case, I think the following quotations sufficiently show the reasoning of the Court:

> "We think, however, the charter preference is inoperative in simplification under section 11(b)(2). The provision having been adopted in 1929, six years prior to enactment of the Public Utility Holding Company Act, a 'simplification' under this Act, having as an incident to it the dissolution of one company in a holding company system, was not an anticipated 'liquidation' within the meaning of Power's charter provision. Enforcement of an overriding public policy should not have its effect visited on one class with a corresponding windfall to another class of security holders. Nor should common stock values be made to depend on whether the Commission, in enforcing compliance with the Act, resorts to dissolution of a particular company in the holding company system, or resorts instead to the devices of merger or consolidation, which would not run afoul of a charter provision formulated years before adoption of the Act in question. The Commission in its enforcement of the policies of the Act should not be hampered in its determination of the proper type of holding company structure by considerations of avoidance of harsh effects on various stock interests which might result from enforcement of charter provisions of doubtful applicability to the procedures undertaken. Where pre-existing contract provisions exist which produce results at variance with a legislative policy which was not foreseeable at the time

> the contract was made, they cannot be permitted to operate. Compare *New York Trust Co.* v. *Securities and Exchange Comm.*, 2 Cir., 131 F. 2d 274; *In re Lacelede Gas Light Company*, D. C., 57 F. Supp. 997. The reason does not lie in the fact that the business of Power continues in another form. That is true of bankruptcy and equity reorganization. It lies in the fact that Congress did not intend that its exercise of power to simplify should mature rights, created without regard to the possibility of simplification of system structure, which otherwise would only arise by voluntary action of stockholders or, involuntarily, through action of creditors. We must assume that Congress intended to exercise its power with the least possible harm to citizens''.

And in speaking of the allocation of the assets between the preferred and common stock, which was made by the Commission on the basis of future earnings, the Court said:

> "The allocation properly may be made without dollar valuation so long as each security holder in the order of his priority receives from that which is available for the satisfaction of his claim the equitable equivalent of the rights surrendered.' ''

So far as your matter is concerned, I think the principal points in these quotations you should note are that the court said that in a simplification proceeding under the Act, the dissolution of one company in a holding company system, was not an anticipated "liquidation" within the meaning of Power's charter adopted six years prior to the enactment of the Act and, accordingly, that in such a proceeding the charter preference would be inoperative, saying that "Where pre-existing contract provisions exist which produce results at variance with a legislative policy which was not foreseeable at the time the contract was made, they cannot be permitted to operate", and further

saying that the reason "lies in the fact that Congress did not intend that its exercise of power to simplify should mature rights, created without regard to the possibility of simplification of system structure, which otherwise would only arise by voluntary action of stockholders or, involuntarily, through action of creditors". It should be noted also that the Court said "Enforcement of an overriding public policy should not have its effect visited on one class with a corresponding windfall to another class of security holders." I should perhaps, also point out that the Court, in approving the allocation, also said that what a stockholder was entitled to was "the equitable equivalent of the rights surrendered."

After considering the *Otis* case and its effect on the question of the basis on which your preferred stock should, under all the circumstances, be retired, I feel that it should be your position in any plans which are filed with the Securities and Exchange Commission in connection with the liquidation and dissolution of your Company, that the preferred stock should be retirable at $100 and accrued dividends, that is, without payment of any premium.

Although, the Court in the *Otis* case said that the Charter preference was in that case to be considered inoperative, personally I do not see how the relative rights of the stockholders can be fairly determined in a vacuum, or how a fair determination of those relative rights in a liquidation proceeding can be arrived at without taking into consideration and giving effect to the Charter provisions. I think the Supreme Court could have arrived at the conclusion it did in the *Otis* case without broadly brushing aside the Charter preferences, and, accordingly, that that case must be interpreted in the light of the circumstances there involved. In that case, if the Court had applied the Charter preferences strictly and given all the assets to the preferred stock, it would have meant that the interest of the common stockholders would have been wiped out and that, too, in the face of the fact that, but for the impact of the Act, the

common stockholders had a right which no one could have taken away from them without their voluntary act, to continue the Company in existence with the possibility, at least, that the Company might in a period of years have paid up the defaulted dividends on the preferred stock so that their interest in the common stock would again have become of value.

On my analysis, the only points the Supreme Court were required to decide in that case (and all it did in fact decide) were (a) that under impact of the Act there cannot be taken away from the common stock and handed to the preferred stock, rights of the common stock which, except for that impact, would have continued indefinitely into the future and possibly have led to the regaining of value for the common stock, without giving the common stock some compensation therefor; (b) that the compensation given to the common stock for the cutting off of such right, namely, 5.48% of Power's assets was fair and equitable to it; and (c) that giving to the preferred stock the remainder of those assets, namely, 94.52% was fair and equitable to it although it had the effect of cutting down its strict preferential right had the liquidation been brought about by "foreseeable" circumstances rather than through impact of the Act. With that decision, I have no quarrel. It seems sound to me. But it certainly did not require the broad brushing aside of the Charter provisions. Accordingly, to me some language which the Court used in deciding the case seems to me quite unnecessary for its decision and, therefore, *dicta*.

In view of the fact that in the Engineers case there are assets of value sufficient to pay off the preferred stock at $100 and accrued dividends, or even to pay the premiums and still leave something of substantial value for the common stock, it is obvious that the questions really involved in the *Otis* case have no application whatsoever in the Engineers case.

When the circumstances involved in the Engineers case are all taken into consideration, it is my belief that the

Engineers' Exhibit No. 38 (Cont'd)

Engineers preferred stockholders will be equitably treated if they are paid on retirement of their shares $100 and accrued dividends without the payment of more as a premium or otherwise, although I do not deny that the langauge used in the *Otis* case gives some basis for a contrary argument.

In other words, to use the language of the Supreme Court in the *Otis* case, it is my feeling that under all the circumstances, to pay the preferred stock on its retirement more than $100 and accrued dividends, would result, as against the common stock, in having the effect of the Act "visited on one class (the common stock) with a corresponding windfall to another class (the preferred stock) of security holders".

Some, at least, of the reasons which led me to this conclusion are as follows:

(1) I do not think the fact that the preferred stockholders contracted that in the case of an involuntary liquidation of Engineers their preference was to be $100 and accrued dividends, can equitably be ignored in considering their rights vis-a-vis those of the common stock. It was no doing of the common stockholders that the Act was passed any more than it was the doing of the preferred stockholders. Yet, the Act forces on both classes of stockholders the termination of their rights in Engineers as a corporation performing the function for which it was incorporated. Under these circumstances, I see no reason why the burden of complying with the Act should not be equitably shared by both the preferred and common stock; and to pay a premium to the preferred, I think is inequitably to shift the whole burden to the common stock.

(2) If the voluntary-involuntary charter provision is to be given any effect (as I strongly think it should) then in no proper sense can it be said that liquidation of Engineers is, under the circumstances, a voluntary liquidation. There can be no question but that except for the impact of the Act, Engineers would have continued as a corporation into

the future indefinitely to serve the function for which it was organized, namely, to hold in one corporation control of its scattered utility companies. The Act has taken away from Engineers the possibility of continuing that function. As interpreted by the Commission in the Engineers "integration" case, Engineers can only continue to hold Virginia Electric and Power Company and for that purpose Engineers as a separate corporation is unnecessary and the expenses of its continuance, a waste of money. Because of the Act, Engineers finds itself with a large sum of money for which it has no economic use. It is impossible for Engineers to continue to carry its burden of preferred dividends after it has been forced to sell the properties with which it earned those dividend requirements. To regard the liquidation of Engineers under these circumstances as a voluntary liquidation, is to close one's eyes to obvious contrary facts. Nor does the fact that that liquidation may result from the filing by Engineers of a voluntary Section 11(e) plan change the situation. This has been consistently held in several court cases.

(3) If the preferred stockholders are paid the premiums, they will be getting the most that they ever could have expected to get from the Company. This is true because if the premiums are to be paid, the amount which the preferred stockholders will receive will be the same as they would have received if the Company, for reasons induced by its own advantage, had exercised its option to call the preferred stock for redemption; and no one has yet asserted that the impact of the Act suspended that option in the Company. If under impact of the Act the preferred stockholders are to receive the most which they could have received under any circumstances, operation of the Act has certainly been advantageous to the preferred stockholders at the expense of the common stockholders; and it would seem to me that so to hold would be again inequitably to throw the entire burden arising from the Act on the common stockholders.

Engineers' Exhibit No. 38 (Cont'd)

(4) Furthermore, when the circumstances under which the preferred stock was issued and its course in the market since its issuance are considered, they seem equitably to lead to the fact that the preferred stockholders will be fairly treated if they receive on retirement $100 and accrued dividends. None of the series of preferred stock were issued by the Company on a basis higher than $100 per share. Furthermore, it is the fact that until the year 1944, the shares of preferred stock have never sold in the market above $100 except for a period of about 13 or 14 months in the years 1929, 1930 and 1931, when, due to market action induced by an attached warrant, the $5.50 stock sold somewhat above $100, and for a period of a few months in 1929 and 1930, the $5 stock sold above $100 induced by a conversion privilege. Also, for most of the period since its issuance, the preferred stock has not only sold below $100, but for a considerable period, very much below $100. In fact, during the years 1933 and 1934, all series of the preferred stock sold in the market from around $15 to $30 per share. Thus, financially, except for a few persons who may have bought their stock within the past year or so, $100 per share and accrued dividends would certainly constitute fair treatment, and for many of the stockholders even that amount is more than generous treatment and in the nature of a windfall.

(5) No dividends have been paid on the common stock of Engineers since 1932. On a consolidated basis, about $22,000,000 of earnings applicable to Engineers common stock have been plowed back into the underlying properties since passage of the Holding Company Act in 1935. It is true that not all of this amount could have been paid out in dividends. But a substantial part of it could have been; and if that had been done the position of the preferred stock would be much less favorable than it is today. The uncertainties presented by the passage of the Act largely motivated the no-common-dividend policy. Under these circum-

stances, to compel the common stock to make the further sacrifice of paying a premium to the preferred stock on liquidation is unfair.

So much for the reasons why it seems to me the preferred stock should equitably be paid no more than $100 and accrued dividends. I realize that the preferred stock will argue that the right to receive their prescribed dividends in the future (now apparently reasonably assured as reflected in the present market price) is a valuable right which in liquidation the preferred stockholders will have to surrender, and that as against the common stock, the premiums should be paid to compensate for that loss. The answer to that argument seems to me to be that the necessity for that surrender is forced on the preferred stock by the Act, and that the preferred stock should no more expect to be paid for that forced surrender than the common stock should expect the preferred stock to pay it for the loss of the diversity factor which adhered in the ownership in one corporation of utilities located in different sections of the country having entirely different economic backgrounds. It may be convenient to throw all the burden of the Act on the common stock, but is it fair to do so? The common stock would have been willing to abide by its contract to continue to pay the dividends which the preferred stock carry until, for some reason of advantage to it, the corporation should exercise its right to call the preferred stock at the redemption prices or voluntarily liquidate and pay the premiums. The impact of the Act, however, takes that option away from the Company and if the premium is to be paid to the preferred stock, it gives to the preferred stock the benefit which it would have had in such case with no corresponding benefit to the common stock. The contract was that in the case of involuntary liquidation, the preferred stock was to get $100 and accrued dividends and it was only in the case of a liquidation or a redemption, carried out for the purposes of obtaining advantage for the common stock, that the premiums were to be paid. The Act makes it impos-

Engineers' Exhibit No. 38 (Cont'd)

sible for the common stock to get that advantage. Since the common stock can no longer get that advantage, there seems to be no logical reason why it should pay for it. When what has happened is analyzed, the involuntary liquidation basis seems more nearly to fit the facts and I believe that basis should be followed.

In view of another recent decision of the Supreme Court, in the case of *Securities and Exchange Commission* v. *Okin*, decided June 4, 1945 (not yet officially reported), I think opportunity is afforded to the preferred stockholders within the structure of the Act itself to settle the premium question. In the Okin case the Supreme Court held that a security holder of a holding company in a case arising under the Act was "an aggrieved party" and entitled to a review in the courts of the decision of the Commission in a case arising under the Act which involves his company. On this point, I doubt whether it makes any difference whether your Company proceeds in its liquidation matter through the instrumentality of a Section 11(e) plan or whether it proceeds through an application and/or declaration filed under various other applicable sections. In either case the Commission will be acting by order and, I think, a court review by the preferred stockholders of any such order would lie.

As above intimated, two possible methods of procedure are open to your Company in connection with its liquidation. One is by means of a so-called voluntary Section 11(e) Plan; the other is by an application and/or declaration under the various other applicable sections of the Act. For reasons which I will develop orally, I am inclined to prefer the Section 11(e) plan.

It seems to me advisable whatever procedure is adopted that it should envisage the ultimate liquidation and dissolution of your Company even though the complete liquidation and dissolution might be postponed for a period of time, since that is the logical thing to do under the circumstances and the question whether a premium would be pay-

Engineers' Exhibit No. 39

able on the preferred stock is more squarely raised under such circumstances.

I will be glad at the meeting to explain further any of the points above discussed or answer, if I can, any question which may occur to you.

Yours very truly,

WILLIAM E. TUCKER.

ENGINEERS PUBLIC SERVICE COMPANY

(Incorporated)

File No. 54-132

Amendment No. 4 to Application Dated September 10, 1945

Engineers Public Service Company (Incorporated) hereby further amends the Plan pursuant to Section 11(e) of the Public Utility Holding Company Act of 1935 for Divestment of Assets and Related Matters of Engineers Public Service Company (Incorporated) filed as Exhibit A to application dated September 10, 1945 as follows:

1. By striking from the table of contents of the Plan references to Part III under Division C and Division D and references to Exhibits A, B, C, D and E.

2. By adding a new paragraph under Part I of Division A of the Plan reading as follows:

"3. The dissolution and liquidation of Engineers."

Engineers' Exhibit No. 39 (Cont'd)

3. By striking out Part III from Division A of the Plan.

4. By striking out the references to Exhibits A, B, C, D and E under Division B of the Plan.

5. By adding a new paragraph to be numbered 9 to follow paragraph 8 under Part I of Division C of the Plan which paragraph 9 will read as follows:

"9. Within 60 days after Part I of the Plan becomes effective as provided in paragraph 2 above, the President or a Vice President, and the Secretary or an Assistant Secretary, of Engineers shall, without further action by the directors or stockholders of Engineers:

(1) deposit for filing in the office of the Secretary of State of the State of Delaware, a certificate signed by them and verified by the oath of one of said officers, which shall state that Engineers is dissolved, in which certificate there shall be included a list of names and residences of the directors and officers of Engineers as of the date of such filing;

(2) deposit for recordation in the office of the Recorder of Kent County, Delaware, being the county in which the principal office of Engineers is maintained, a duplicate original of the certificate referred to in (1) above;

(3) cause to be published a copy of such certificate in one issue of a newspaper published in Kent County, Delaware, being the county in which the principal office of Engineers in the State of Delaware is situated; and

(4) deposit for filing in the office of the Secretary of State of the State of Delaware an affidavit

Engineers' Exhibit No. 39 (Cont'd)

of the Manager or Publisher of the newspaper referred to in (3) above, that said certificate had been published one time in said newspaper;

and thereupon, when the steps specified in (1), (2), (3) and (4) above shall have been taken, the dissolution of Engineers shall thereby become effective, but Engineers shall, nevertheless, be continued as a body corporate for the purposes and for the term specified in Section 42 of the General Corporation Law of the State of Delaware. Upon the dissolution of Engineers becoming effective as aforesaid, the persons who shall constitute the members of the Board of Directors of Engineers at the time of such dissolution, as specified in the certificate filed as provided in (1) above, shall thereupon be and become Trustees of the estate and effects of Engineers and it shall be their duty to collect the debts and property due and belonging to Engineers with power to prosecute and defend, in the name of Engineers or otherwise, all such suits as may be necessary or proper for the purposes aforesaid, and to appoint an agent or agents under them and do any other acts which might be done by Engineers, if in being, that may be necessary for the final settlement of the unfinished business of Engineers, and the powers of such Trustees shall be continued as long as shall be necessary for the purposes aforesaid. Such Trustees shall, with the approval of the Commission, have the power and authority to borrow in the name and on behalf of Engineers at any time or from time to time any amount or amounts of money deemed by them to be necessary or advisable to facilitate the liquidation of Engineers in the manner provided for in this paragraph 9 for such term not exceeding three years from the effective date of such dissolution, and upon such other terms and

Engineers' Exhibit No. 39 (Cont'd)

conditions, including security, if any, for the payment thereof, as they shall determine. If, by reason of death, resignation, incapacity or otherwise, vacancies shall occur among such Trustees, prior to the final consummation of their duties as aforesaid, such vacancies may be filled by vote of one-third (not less than two) of the Trustees then in office. Such Trustees may adopt such reasonable rules and regulations for the carrying on of their activities as they may deem to be desirable, including provision for notice of and the holding of meetings. A quorum of such Trustees for the transaction of business shall be one-third of the Trustees at any time in office (but not less than two). It shall be the duty of such Trustees to the extent possible, to liquidate the debts and obligations of Engineers from the estate and assets of Engineers other than the shares of common stock of Virginia Electric and Power Company, to the end that the final liquidation of Engineers shall be accomplished by the distribution, pro rata, among its common stockholders of as many of the shares as possible of common stock of Virginia Electric and Power Company, and no common stockholder of Engineers shall have any right to require any different method of liquidation. In connection with such distribution of the shares of common stock of Virginia Electric and Power Company, such Trustees, with the consent of any regulatory authorities having jurisdiction, may cause the shares of common stock of Virginia Electric and Power Company to be reclassified in such manner as they shall deem to be advisable, in order to facilitate such distribution."

6. By striking out the proviso from the third paragraph under Part II of Division C of the Plan and inserting in lieu thereof the following:

Engineers' Exhibit No. 39 (Cont'd)

"provided, however, that such automatic amendment, if any, of this Part II of the Plan shall be without prejudice to the right of Engineers to contest before the Commission and/or in any court having jurisdiction any finding or order of the Commission as a result of which Engineers shall be directed or required to pay to its Preferred Stockholders any amount in addition to $100 per share plus accrued dividends to the date of deposit provided to be paid under Part I of this Plan, which right is hereby expressly reserved."

7. By striking out Part III under Division C of the Plan.

8. By striking out Part III under Division D of the Plan.

9. By striking out Exhibits A, B, C, D and E to the Plan; so that as amended the Plan will read as set forth in Exhibit A-1 attached thereto.

10. To bring up to date certain statements contained therein and to make certain other statements contained therein consistent with the above changes.

Pursuant to the requirements of the Public Utility Holding Company Act of 1935, the Company set forth below caused this instrument to be duly executed on its behalf by its authorized officers on this the 14th day of December, 1945.

ENGINEERS PUBLIC SERVICE COMPANY

(Incorporated)

Plan Pursuant to Section 11(e) of the

PUBLIC UTILITY HOLDING COMPANY ACT OF 1935 FOR DIVESTMENT OF ASSETS AND RELATED MATTERS

DIVISION A

Purposes of Plan

Part I has the following purposes:

1. Compliance with orders of the Securities and Exchange Commission ("the Commission") directing the divestment by Engineers Public Service Company (Incorporated) ("Engineers") of its interest in El Paso Electric Company ("El Paso") and Gulf States Utilities Company ("Gulf States").

2. The retirement of the Preferred Stock of Engineers at $100 per share and accrued dividends (the question as to whether or not any additional amount is payable to such Stockholders to be determined under Part II).

3. The dissolution and liquidation of Engineers.

Part II has the following purpose:

The purpose of Part II is to request the Commission to issue a separate order finding that it is fair and equitable to the Preferred Stockholders of Engineers to pay $100 per share plus accrued dividends to the date of deposit in trust of funds therefor in complete liquidation of their stock. (This Part of the Plan

Engineers' Exhibit No. 39 (Cont'd)

provides, in the event the Commission finds that some additional amount shall be payable, for the automatic amendment of this Part so as to provide for such additional payment, preserving to Engineers, however, the right to apply for a review of any order providing for or requiring any additional payment.)

DIVISION B

Introductory Statement

Engineers, organized and existing under the laws of the State of Delaware, is a registered holding company under the Public Utility Holding Company Act of 1935 ("the Act"). Engineers holds the following securities:

150,000 shares of Common Stock without par value of El Paso, being all of the authorized and issued Common Stock of said Company. These shares are to be reclassified into 381,994 shares of Common Stock, without par value, prior to the consummation of Part I of the Plan.

280,000 shares of Common Stock without par value of Gulf States, being all of the issued Common Stock of said Company, there being 20,000 shares of such Common Stock authorized but unissued. The 280,000 outstanding shares of Common Stock are to be reclassified into 1,909,968 shares of Common Stock, without par value, prior to the consummation of Part I of the Plan.

2,932,065 shares of Common Stock without par value of Virginia Electric and Power Company ("Virginia"), there being, in addition, 6,360 shares of such Common Stock in the hands of the public and 20 shares of such Common Stock reserved for scrip and 1,061,555 shares of such Common Stock authorized but unissued.

Engineers' Exhibit No. 39 (Cont'd)

$508,800 principal amount of 5% note payable and 15,000 shares of capital stock of the par value of $40 per share of The Western Public Service Company ("Western"), being all of the authorized and outstanding amounts of such securities.

Engineers has outstanding the following securities:

143,951 shares of $5 Dividend Convertible Preferred Stock ("$5 Preferred") without par value, entitled ot receive $100 per share, plus accrued dividends, in involuntary liquidation and $105 per share, plus accrued dividends, on redemption or voluntary liquidation.

183,406 shares of $5.50 Cumulative Dividend Preferred Stock ("$5.50 Preferred") without par value, entitled to receive $100 per share, plus accrued dividends, in involuntary liquidation and $110 per share, plus accrued dividends, on redemption or voluntary liquidation.

65,098 shares of $6 Cumulative Dividend Preferred Stock ("$6 Preferred"), without par value, entitled to receive $100 per share, plus accrued dividends, in involuntary liquidation and $110 per share, plus accrued dividends, on redemption or voluntary liquidation.

1,909,968 shares of Common Stock of the par value of $1 per share.

Early in 1940 the Commission brought a proceeding against Engineers and its subsidiaries under Section 11(b)(1) of the Act. This Section provides for the restriction of integrated systems and incidental businesses which a holding company may control. On July 23, 1941, the Commission issued an order in that proceeding directing Engineers to dispose of its interest in The Key West Elec-

Engineers' Exhibit No. 39 (Cont'd)

tric Company and Puget Sound Power & Light Company. This order has been fully complied with. On December 29, 1941, the Commission issued a further order under Section 11(b)(1) directing Engineers to dispose of its interest in Missouri Service Company, The Northern Kansas Power Company and Western. Engineers' interests in Missouri Service Company and The Northern Kansas Power Company have been sold and a contract for the sale of Western has been signed. On September 16, 1942 and October 6, 1942, the Commission issued further orders under the same Section directing Engineers to dispose of all of its remaining investments except that in Virginia, which, if retained, must dispose of its gas and transportation operations. Engineers has complied with these 1942 orders by disposing of all of the investments ordered divested by those orders except its investments in Gulf States, El Paso and Virginia and with respect to the latter two companies, has partially complied with said orders by the disposal of their transportation properties. Engineers filed a petition with the United States Court of Appeals for the District of Columbia for a review of the 1942 orders and on November 22, 1943, the Court set these orders aside and remanded the case to the Commission for further proceedings in accordance with its opinion.

The Supreme Court of the United States granted writs of certiorari to both the Commission and Engineers and the case was argued in the Supreme Court in November, 1945 but has not yet been decided. It is not expected that any portion of this Plan shall be consummated until after the decision of this case.

DIVISION C

The Plan

Part I

1. Engineers will sign an agreement with a bank to borrow, subject to the consummation of Part I of the

Engineers' Exhibit No. 39 (Cont'd)

Plan, $3,000,000 on a two-year note, payable $750,000 semi-annually. The agreement will provide that Engineers shall not, until the bank loan is fully paid, pay any dividends in cash on its Common Stock, or make any other distribution in respect thereof other than such as may be provided for in this Part I of the Plan. Provision will be made in this agreement to permit, if needed, the borrowing of additional amounts, which provision may be availed of, in the event Western is not sold before the effective date of Part I of the Plan or in the event that some delay is involved in selling shares of Gulf States Common Stock not subscribed for under subscription warrants or for any other reason.

2. Engineers will mail warrants to its Common Stockholders of record on a date to be fixed by the Board of Directors of Engineers, each of which warrants will evidence the right to acquire from Engineers shares of Gulf States Common Stock on the basis of one share of Gulf States Common Stock for each share of Engineers Common Stock held by such Stockholders on such date either

   (a) by purchasing from Engineers whole shares of such Gulf States Common Stock at the rate of $11.50 per share, payable in United States funds, or in the alternative,

   (b) by exchanging with Engineers whole shares of Engineers Preferred Stock for shares of Gulf States Common Stock on the basis of equivalent values, assigning $11.50 per share for each share of Gulf States Common Stock and $100 plus accrued dividends to the expiration date of the warrant for each share of Engineers Preferred Stock; provided that, on the basis of the relative values above stated, the value of the whole shares of Engineers Preferred Stock surren-

Engineers' Exhibit No. 39 (Cont'd)

dered in exchange shall not exceed the value of the shares of Gulf States Common Stock which the warrant holder is entitled to and intends to acquire, but to the extent that the value of such shares of Engineers Preferred Stock surrendered in exchange is less than the value of such shares of Gulf States Common Stock to which the warrant holder is intitled and intends to acquire, the excess shall be paid by the warrant holder to Engineers in United States funds. Any holder of Engineers Prefetred Stock who surrenders his stock in exchange for Gulf States Common Stock will, in respect of such surrendered shares, retain the right to receive the same amount which stockholders surrendering their stock under the provisions of Paragraph 5 of this Part I shall receive, in addition to $100 per share plus accrued dividends to the date of deposit therein provided for, if any such amount is finally determined to be payable.

The Board of Directors of Engineers may, however, withhold the mailing of such warrants in the event that, in its opinion, market conditions are such as to render it inadvisable to proceed with the issuance of the warrants. Upon the mailing of such warrants, Part I of the Plan shall be deemed to be effective. In cases where the addresses of such Stockholders are unknown or are outside continental United States and Canada, warrants will not be mailed to Common Stockholders of this Company of record on such date but will be held against instructions of the record owners, or their duly authorized agents, until the opening of business on the day before the expiration date of the warrant period, at which time all warrants so held with respect to which no such instructions have been received may be sold by the Company

Engineers' Exhibit No. 33 (Cont'd)

and the pro rata share of the aggregate net proceeds, if any, remitted to each Stockholder on whose behalf warrants are so sold, or, in cases where such remittance is not lawful or the address is unknown, held for the account of each such Stockholder subject to payment upon receipt of lawful instructions. The warrants must be exercised on or before a specified date (to be approximately ten days after the date of mailing warrants). All warrants will be registered in the names of the Common Stockholders and will be transferable on the books of Engineers. Such warrants will be issued and distributed without the surrender by the Common Stockholders of Engineers of their Common Stock.

3. The Transfer Agent will mail or deliver certificates for Gulf States Common Stock to those persons who exercise the warrants. To the extent warrants are not exercised, Engineers will sell shares of Gulf States Common Stock represented thereby as promptly thereafter and in such manner as the Board of Directors of Engineers deems to be in the best interests of Engineers, subject to the obtaining of the requisite regulatory approvals.

4. Engineers will issue its note to bank.

5. Engineers will deposit in trust for the benefit of its Preferred Stockholders with a solvent bank or trust company an amount equal to $100 per share plus accrued dividends to the date of such deposit for each share of Preferred Stock not surrendered in exchange pursuant to (b) of paragraph 2 of this Part I and will give to all holders of such Preferred Stock five days' prior notice of such deposit at their respective registered addresses, and such notice shall state that upon surrender by the Preferred Stockholders of their certificates for Preferred Stock to

Engineers' Exhibit No. 39 (Cont'd)

the Transfer Agent, they will be paid $100 per share plus such accrued dividends; and from and after the date of such deposit, dividends on the Preferred Stock will cease and determine. Such distribution will be in cancellation of the whole of the outstanding Preferred Stock of Engineers and thereafter the only right remaining to the registered holder of each certificate of Preferred Stock will be the right to receive an additional amount if any is determined to be payable (see Part II). The President or a Vice President and the Secretary or an Assistant Secretary of Engineers shall, without further action by Directors and Stockholders of Engineers, file a certificate or certificates of Engineers reflecting the elimination of the capital represented by the Preferred Stock and the elimination of the authorized Preferred Stock in the Office of the Secretary of State of the State of Delaware and shall record in the Office of the Recorder of Deeds of New Castle County, Delaware, a copy or copies thereof certified by the Secretary of State.

6. Engineers will distribute as a dividend in partial liquidation Common Stock of El Paso pro rata to the Engineers Common Stockholders on the basis of 1/5th of a share of El Paso Common Stock for each share of Engineers Common Stock. No fractional shares of Common Stock will be issued or delivered, but in lieu thereof scrip will be issued and delivered. Such distribution, issue and delivery will be without the surrender by the Common Stockholders of Engineers of their Common Stock. Such scrip will not be entitled to dividends, voting rights or any other stockholders' rights. When combined in lots aggregating one or more full shares of stock, scrip may, up to the date of sale (hereinafter in this paragraph described) of such shares of stock, be exchanged for such shares, together with any dividends which shall

Engineers' Exhibit No. 39 (Cont'd)

have been paid to Stockholders of record on any date subsequent to the effective date of this Part I of the Plan. Engineers will undertake to provide facilities whereby any holder of scrip certificates may dispose of such scrip, or acquire additional scrip so as to enable the holder to exchange such scrip for full shares of stock. All shares of stock reserved for issuance and delivery upon the exchange of scrip which shall not have been issued or delivered in connection with such exchange within two years after the effective date of this Part I, shall, promptly after the expiration of such period, be sold by the Transfer Agent and the Transfer Agent shall, as soon as possible thereafter, distribute to the holders of scrip certificates not theretofore surrendered their proportionate part of the proceeds of sale, plus their proportionate part of any dividends which shall have been declared to holders of record as of a date prior to the date of sale.

7. In order to provide a reserve for the purpose of making the payment, if any, to which Engineers Preferred Stockholders shall, on final determination, be held to be entitled in addition to $100 per share and accrued dividends to the date of the deposit provided for in paragraph 5 of this Part I, Engineers will retain its interest in the Virginia Common Stock until such a final determination is made.

8. Epsco, Inc., the mutual service corporation, will cancel its service contracts with Engineers, Virginia, Gulf States and El Paso.

9. Within 60 days after Part I of the Plan becomes effective as provided in paragraph 2 above, the President or a Vice President, and the Secretary or an Assistant Secretary, of Engineers shall, without further action by the directors or stockholders of Engineers:

Engineers' Exhibit No. 39 (Cont'd)

(1) deposit for filing in the office of the Secretary of State of the State of Delaware, a certificate signed by them and verified by the oath of one of said officers, which shall state that Engineers is dissolved, in which certificate there shall be included a list of names and residences of the directors and officers of Engineers as of the date of such filing;

(2) deposit for recordation in the office of the Recorder of Kent County, Delaware, being the county in which the principal office of Engineers is maintained, a duplicate original of the certificate referred to in (1) above;

(3) cause to be published a copy of such certificate in one issue of a newspaper published in Kent County, Delaware, being the county in which the principal office of Engineers in the State of Delaware is situated; and

(4) deposit for filing in the office of the Secretary of State of the State of Delaware an affidavit of the Manager or Publisher of the newspaper referred to in (3) above, that said certificate had been published one time in said newspaper;

and thereupon, when the steps specified in (1); (2), (3) and (4) above shall have been taken, the dissolution of Engineers shall thereby become effective, but Engineers shall, nevertheless, be continued as a body corporate for the purposes and for the term specified in Section 42 of the General Corporation Law of the State of Delaware. Upon the dissolution of Engineers becoming effective as aforesaid, the persons who shall constitute the members of the Board of Directors of Engineers at the time of such dissolution, as specified in the certificate filed as provided in (1) above, shall thereupon be and become

Engineers' Exhibit No. 39 (Cont'd)

Trustees of the estate and effects of Engineers and it shall be their duty to collect the debts and property due and belonging to Engineers with power to prosecute and defend, in the name of Engineers or otherwise, all such suits as may be necessary or proper for the purposes aforesaid, and to appoint an agent or agents under them and do any other acts which might be done by Engineers, if in being, that may be necessary for the final settlement of the unfinished business of Engineers, and the powers of such Trustees shall be continued as long as shall be necessary for the purposes aforesaid. Such Trustees shall, with the approval of the Commission, have the power and authority to borrow in the name and on behalf of Engineers at any time or from time to time any amount or amounts of money deemed by them to be necessary or advisable to facilitate the liquidation of Engineers in the manner provided for in this paragraph 9 for such term not exceeding three years from the effective date of such dissolution, and upon such other terms and conditions, including security, if any, for the payment thereof, as they shall determine. If, by reason of death, resignation, incapacity or otherwise, vacancies shall occur among such Trustees, prior to the final consummation of their duties as aforesaid, such vacancies may be filled by vote of one-third (not less than two) of the Trustees then in office. Such Trustees may adopt such reasonable rules and regulations for the carrying on of their activities as they may deem to be desirable, including provision for notice of and the holding of meetings. A quorum of such Trustees for the transaction of business shall be one-third of the Trustees at any time in office (but not less than two). It shall be the duty of such Trustees to the extent possible, to liquidate the debts and obligations of Engineers from the estate and assets of Engineers other than

Engineers' Exhibit No. 39 (Cont'd)

the shares of common stock of Virginia Electric and Power Company, to the end that the final liquidation of Engineers shall be accomplished by the distribution, pro rata, among its common stockholders of as many of the shares as possible of common stock of Virginia Electric and Power Company, and no common stockholder of Engineers shall have any right to require any different method of liquidation. In connection with such distribution of the shares of common stock of Virginia Electric and Power Company, such Trustees, with the consent of any regulatory authorities having jurisdiction, may cause the shares of common stock of Virginia Electric and Power Company to be reclassified in such manner as they shall deem to be advisable in order to facilitate such distribution.

Engineers believes and alleges that the approval of this Part I of the Plan is necessary for compliance with the orders issued by the Commission on September 16, 1942 and October 6, 1942 under Section 11 of the Act and to effectuate the provisions of subsection (b) of Section 11 of the Act and fair and equitable to the persons affected thereby, and if the Commission shall find Part I of the Plan necessary to effectuate the provisions of subsection (b) of Section 11 of the Act and fair and equitable to the persons affected thereby, Engineers prays that the Commission shall enter a separate order approving Part I of the Plan containing a recitation that the relevant transactions of Part I of the Plan are necessary or appropriate to the integration or simplification of the holding company system of which Engineers is a member and necessary or appropriate to effectuate the provisions of subsection (b) of Section 11 of the Act, all in accordance with the meaning and requirements of the Internal Revenue Code, as amended, including Sections 371 and 1808(f) and Supplement R thereof.

Engineers' Exhibit No. 39 (Cont'd)

Part II

Engineers shall pay to its Preferred Stockholders no amount in addition to the $100 per share, plus accrued dividends to the date of deposit, provided to be paid under Part I of this Plan.

Engineers believes and alleges that the approval of this Part II of the Plan is necessary, if Part I of the Plan is consummated, to effectuate the provisions of subsection (b) of Section 11 of the Act and fair and equitable to the persons affected thereby, and if the Commission shall find Part II of the Plan necessary to effectuate the provisions of subsection (b) of Section 11 of the Act and fair and equitable to the peresons affected thereby, Engineers prays that the Commission shall enter a separate order approving Part II of the Plan.

To the end that there may be determined by the Commission in the proceedings in connection with Part II of this Plan the amount, if any, which, in the opinion of the Commission, it is fair and equitable that Engineers shall pay to its Preferred Stockholders in addition to $100 per share plus accrued dividends to the date of deposit provided to be paid under Part I of this Plan, Engineers agrees that in the event the Commission shall in any findings or order respecting Part II of this Plan find that it is not fair and equitable to the persons affected thereby that Engineers shall pay to its Preferred Stockholders no amount in addition to $100 per share plus accrued dividends to the date of deposit provided to be paid under Part I of this Plan and shall in such findings or order specify an amount in addition thereto which Engineers should pay to its Preferred Stockholders, then and in such events this Part II of the Plan shall be and thereby become automatically amended so as to provide that Engineers shall pay to its Preferred Stockholders such additional amount as the Commission shall have so specified; provided, however, that such automatic amendment, if any, of this Part II of the Plan shall be with-

out prejudice to the right of Engineers to contest before the Commission and/or in any court having jurisdiction any finding or order of the Commission as a result of which Engineers shall be directed or required to pay to its Preferred Stockholders any amount in addition to $100 per share plus accrued dividends to the date of deposit provided to be paid under Part I of this Plan, which right is hereby expressly reserved.

DIVISION D

Conditions to Effectuation of the Plan

Part I

The effectuation of Part I of the Plan is dependent upon the satisfaction of the following conditions:

1. Gulf States shall have reclassified its Common Stock into 1,909,968 shares of Common Stock, without par value; Gulf States shall have given to its Preferred Stock seven votes per share instead of the one vote per share it now carries; and El Paso shall have reclassified its Common Stock into 381,994 shares of Common Stock, without par value.

2. The Commission shall have issued the order prayed for in Part I of this Plan.

3. The Commission, when requested by Engineers, shall have instituted a proceeding in a court of competent jurisdiction pursuant to Section 11(e) of the Act and such court shall have entered a separate decree or order finding Part I of the Plan to be fair and equitable and appropriate to effectuate the provisions of Section 11 of the Act and such court shall have taken action to enforce and carry out the terms and provisions of Part I of the Plan.

4. There shall have been obtained from the United States Treasury Department (unless Engineers, in its dis-

cretion, shall waive this condition) a closing agreement or ruling or closing agreements or rulings as to the tax consequences of the transactions necessary to carry out Part I of the Plan and such agreements or rulings shall be satisfactory to counsel for Engineers.

5. Any corporate action in connection with Part I of the Plan, which may be deemed necessary by counsel for Engineers shall have been carried out in a manner satisfactory to such counsel.

6. Authorization satisfactory to counsel for Engineers shall have been given for the carrying out of Part I of the Plan and for the issuance for all securities provided to be issued pursuant to Part I by the Plan, by all regulatory commissions, the consent of which is legally necessary.

7. Engineers shall have made arrangements to borrow requisite funds to enable it, together with cash on hand and cash from the exercise of the warrants, to pay $100 per share plus accrued dividends to the date of deposit on the outstanding Engineers Preferred Stock.

8. The warrants referred to in paragraph 2 of Part I of the Plan shall have been mailed to Engineers Common Stockholders.

Part II

The effectuation of Part II of the Plan is dependent upon the satisfaction of the following conditions:

1. The Commission shall have taken the requisite action under Part II of this Plan.

2. Part I of the Plan shall have been consummated.

Engineers' Exhibit No. 39 (Cont'd)

DIVISION E

Amendments to the Plan and Other Provisions

Until approved by the Commission, the Plan or any Part thereof may be modified or amended in any respect or particular by Engineers. After being approved by the Commission and before being approved by a court, the Plan or any part thereof may be modified or amended in any respect or particular by Engineers with the approval of the Commission. After the approval by the Court and before any Part of the Plan has been consummated, pursuant to the order or decree of a court of competent jursidiction, such Part may be modified or amended in any respect or particular by Engineers with the approval of both the Commission and the Court. No amendments to the Plan or any Part thereof shall be made without the consent or agreement of Engineers.

Engineers may employ such agents, attorneys or others as it may deem desirable for the purpose of carrying out the Plan or any Part thereof. Engineers may from time to time delegate to others any power or discretion conferred upon it by the Plan.

The statements, opinions and conclusions contained in the Plan are intended solely for the purpose of assisting the Commission, any court and the Stockholders in any steps or proceedings with respect to the Plan and are not intended for use or information by prospective purchasers of the securities whether now existing or proposed to be issued or for any purposes other than the purposes set forth in this paragraph; and no one is authorized to make any statements regarding the Plan, whether with reference to any securities referred to herein or otherwise which are not set forth herein.

Engineers' Exhibit No. 39 (Cont'd)

DIVISION F

Reservation of Rights

In filing this Plan, Engineers does so solely under compulsion and upon the basis that such Plan constitutes a means whereby Engineers may comply with the orders of the Commission entered on September 16, 1942 and October 6, 1942 and otherwise comply with the Act. This Plan is filed without waiver and with full reservation of all constitutional and legal rights of Engineers and its subsidiaries to attack the validity and legality of any section or any subdivision of any section of, or any order, rule or regulation under, the Act, including, without limitation, the right to proceed with their case involving Section 11 of the Act pending in the Supreme Court of the United States, and it is respectfully requested that the Commission's order or orders herein shall reserve to Engineers and its subsidiaries the rights hereinabove referred to.

Schedule B

(p. 1796a) Engineers' Exhibit No. 47 (Cont'd)

Page 3

Engineers Public Service Company (Incorporated) and Subsidiary Companies

Explanatory Notes to Pro Forma Balance Sheet Consolidated as at June 30, 1945 Giving Effect to the Consummation of Parts I and II of the Plan as Proposed and to Income Tax Adjustments Made on the Books of Virginia in August, 1945

(a) Utility plant (including intangibles) is stated on the following basis:

(1) At original cost for electric, gas and common properties for which studies have been completed plus plant acquisition adjustments of $11,237,468	$132,427,009
(2) At cost of construction and/or acquisition based on cash paid and par or stated value of securities issued therefor, for gas property for which original cost studies are required but not completed (extension to September 30, 1945 for the completion of such studies has been granted by State regulatory body)	5,513,847
Total	$137,940,856

Provision is being made, pursuant to orders of regulatory commissions, for the amortization of plant acquisition adjustments shown under (1) above by charges to income over 15-year periods commencing in 1943 and 1944.

While studies relating to the original cost of properties included under (2) above are not complete, it is not expected that any material adjustments will be required in connection with the reclassification of such properties on the basis of original cost.

(b) Represents the excess of the recorded gross investment in shares of Virginia over the adjusted net assets applicable to such shares at dates of acquisition.

Virginia common shares owned by Engineers	2,932,065
Capital represented by such shares	$14,546,228
Acquired surplus	694,711
Total	15,240,939
Cost to Engineers	27,762,262
Excess	$12,521,323

(c) Represented by 1,909,968 shares of $1 par value. Authorized 1,909,968 shares.

(d) Approximately $6,034,000 of the pro forma consolidated earned surplus is not available for the payment of dividends on common stock of Virginia due to covenants made by such company restricting the payment of dividends on common stock, and the parent company earned surplus of $10,660,852 included in the pro forma consolidated earned surplus would not be available for the payment of dividends on its common stock until the $3,000,000 note payable is paid in full.

There is a contingent asset of approximately $3,740,000, representing possible refunds of Federal income and excess profits taxes.

Engineers' Exhibit No. 47 (Cont'd)

Schedule C-1

(P. 1802 a)

Page 3

INCOME STATEMENT NOTES

(a) The comparative income statement includes for the period May 26, 1944 to March 30, 1945, inclusive, operations of Citizens Rapid Transit Corporation, a wholly owned subsidiary acquired in merger May 25, 1944, and includes since May 25, 1944 only, operations of the properties of Virginia Public Service Company which were acquired by the Company in the merger. During December 1944 and March 1945, all of the investments in transportation properties, including th capital stock of Citizens Rapid Transit Corporation, were sold. Net income from such transportation properties included in the income statement was not material.

(b) Includes credits resulting from capitalization of interest on funds used for construction purposes:

	1945	1944
June	$. —0—	$10,373.75
12 Months	10,703.13	95,905.09

(c) Loss.

(d) See note (b) to balance sheet.

(e) The provisions for Federal income taxes for the 12 months ending June 30, 1945 includes provision for estimated excess profits taxes of $1,166,048 (prior period—$3,122,044) after giving effect to reductions (1) as shown separately in the income statement and (2) of $4,424,813.24 (prior period—$2,091,177) related to and applied against items charged directly to surplus, and after deducting estimated post-war credit of $129,559 (prior period—$345,895).

BALANCE SHEET NOTES

(a) Consolidated balance sheet of Virginia Electric and Power Company and Citizens Rapid Transit Corporation, a former subsidiary. During December 1944 and March 1945, all of the investments in transportation properties, including the capital stock of Citizens Rapid Transit Corporation, were sold.

(b) Utility plant (including intangibles) as at June 30, 1945 is stated on the following basis:

(1) At original cost for electric, gas and common properties for which studies have been completed plus plant acquisition adjustments of $11,237,468.36	$129,857,008.71
(2) At cost of construction and/or acquisition based on cash paid and par or stated value of securities issued therefor, for gas property for which original cost studies are required but not completed (extension to September 30, 1945 for the completion of such studies has been granted by State regulatory body)	5,513,846.74
Total	$135,370,855.45

Provision is being made, pursuant to orders of regulatory commissions, for the amortization of plant acquisition adjustments shown under (1) above by charges to income over 15-year periods commencing in 1943 and 1944.

While studies relating to the original cost of properties included under (2) above are not complete, it is not expected that any material adjustments will be required in connection with the reclassification of such properties on the basis of original cost.

(c) Represented by 289,471 shares of $100 par value $5 dividend preferred stock, cumulative, entitled to $117.50 per share prior to March 20, 1947 (1950—$115.50; 1953—$113.50; thereafter—$112.50 per share) upon redemption or voluntary liquidation, and to $100 per share upon involuntary liquidation, together with dividends accrued or in arrears in all cases. Total preferred stock authorized 500,000 shares.

(d) Represented by 2,938,445 shares of no par value, including 20 shares reserved for exchange of outstanding scrip. Authorized 4,000,000 shares.

(e) The Company has covenanted that so long as any of the Series E Bonds remain outstanding it will not declare or pay any dividend or make any other distribution to any holder of its common stock (other than a dividend payable in shares of its common stock) except out of net income (as defined in the indenture securing the bonds) accumulated subsequent to September 30, 1944, after deducting the sum of (1) $55,000 per month in respect of such of the first 25 full calendar months after September, 1944 as shall have elapsed, and (2) $75,000 a month in respect of such of the first 116 full calendar months after September, 1944 as shall have elapsed. Earned surplus unrestricted as to common dividends amounted to $1,886,000 at June 30, 1945.

(f) On September 16, 1942 and October 6, 1942 the Securities and Exchange Commission issued Orders against the Company, Engineers Public Service Company, its parent, and the other subsidiaries of that company under Section 11(b)(1) of the Public Utility Holding Company Act of 1935. The Orders, among other things, in effect directed Engineers to divest itself, within one year, of all of its investments except that in the Company unless it should elect within a brief period of time to choose Gulf States Utilities Company as its single system. If the Company should be retained as the single system, the Orders required it to dispose of its gas and transportation operations. During December 1944 and March 1945, all the Company's investments in transportation properties were sold.

The Company filed a petition with the United States Court of Appeals for the District of Columbia for a review of the September 16, 1942 and October 6, 1942 Orders and on November 22, 1943 the Court set the Commission's Orders aside and remanded the case to the Commission for further proceedings in accordance with its opinion. The grounds for the reversal were, in substance, that Engineers was entitled to more time to make its choice of its single system and that the interpretation of the Act upon which the Commission directed the divestment of the transportation business was incorrect. Both the Securities and Exchange Commission and the Company have applied to the Supreme Court of the United States for writs of certiorari which have been granted. No date has now been set for argument.

P. R. WILLIAMS,
Comptroller

Note: See explanatory notes on the following page which are to be read as an integral part of the balance sheet.

On September 16, 1942 and October 6, 1942 the Securities and Exchange Commission issued Orders against the Company, Engineers Public Service Company, its parent, and the other subsidiaries of that company under Section 11(b)(1) of the Public Utility Holding Company Act of 1935. The Orders, among other things, in effect directed Engineers to divest itself, within one year, of its investment in the Company unless it should elect within a brief period of time to choose the Company as its single system. The Company filed a petition with the United States Court of Appeals for the District of Columbia for a review of the September 16, 1942 and October 6, 1942 Orders and on November 22, 1943

Engineers' Exhibit No. 47 (Cont'd)

Schedule C-2

(P. 1805 a)

COMPARATIVE BALANCE SHEET NOTES

June 30, 1945

the Court set the Commission's Orders aside and remanded the case to the Commission for further proceedings in accordance with its opinion. The grounds for the reversal were, in substance, that Engineers was entitled to more time to make its choice of its single system and that the interpretation of the Act upon which the Commission directed the divestment of businesses other than electric or gas business was incorrect. Both the Securities and Exchange Commission and the Company have applied to the Supreme Court of the United States for writs of certiorari which have been granted. No date has now been set for argument.

(a) Pursuant to an order of the Federal Power Commission, the Company is providing a reserve for amortization of plant acquisition adjustments by charges to income over a 15-year period beginning January 1943. The Company may, at its option, accelerate the charges to income and credits to the reserve for amortization of plant acquisition adjustments by utilizing certain anticipated reductions in taxes arising through the amortization of emergency facilities.

(b) Represented by 120,000 shares of $4.40 dividend preferred stock, $100 par value, cumulative, authorized and outstanding, entitled to $111.00 per share prior to October 1, 1949 (1954—$109.50; thereafter—$108.00 per share) upon redemption or voluntary liquidation, and to $100 per share upon involuntary liquidation, together with dividends accrued or in arrears in all cases. On October 9, 1944 68,855 shares of the $4.40 dividend preferred stock were issued in exchange for a similar number of shares in the aggregate of $6 dividend and $5.50 dividend preferred stock and 51,145 shares were sold for cash. The remaining shares of $6 dividend and $5.50 dividend preferred stock were called for redemption on November 9, 1944 at redemption prices of $110 and $108 per share respectively plus accrued dividends to the redemption date in each case. A portion of the proceeds from the sale of the $4.40 dividend preferred stock was used to retire the bank note of $1,000,000.

(c) Represented by 280,000 shares of no par value. Authorized 300,000 shares.

(d) The Company has covenanted that, so long as any shares of its $4.40 dividend preferred stock remain outstanding, it will not declare or pay any dividend or make any other distribution to the holders of its common stock (other than a dividend in common stock of the Company) except out of net income (as defined in the Company's amended charter) accumulated subsequent to June 30, 1944, after deducting the sum of $18,190 per month in respect of such of the first 120 full calendar months after October 9, 1944 as shall have elapsed; (provided, however, that no common stock dividend may be paid in excess of 75% of the net income available as aforesaid, if, after giving effect thereto, the common stock capital and surplus (excluding premiums) would be less than 25% of the Company's capitalization (including surplus but excluding premiums). Earned surplus unrestricted as to common stock dividends amounted to $608,000 at June 30, 1945.

H. W. FABER,
Treasurer.

(a) Loss.

(b) Excludes operations of properties sold December 31, 1943. See note (d) below.

(c) The amounts shown above for Federal income taxes include provision for estimated excess profits taxes of $703,952 for the 12 months ending June 30, 1945 (1944—$612,446) after deducting estimated post-war credit of $78,217 (1944—$68,050).

(d) On September 16, 1942 and October 6, 1942 the Securities and Exchange Commission issued Orders against the Company, Engineers Public Service Company, its parent, and the other subsidiaries of that company under Section 11(b)(1) of the Public Utility Holding Company Act of 1935. The Orders directed, among other things, Engineers to divest itself, within one year, of its investment in the Company and directed the Company to dispose, within one year, of the transportation business in and around El Paso and the American halves of two international toll bridges operated by the Company. The Company disposed of its transportation and bridge businesses on December 31, 1943.

The Company filed a petition with the United States Court of Appeals for the District of Columbia for a review of the September 16, 1942 and October 6, 1942 Orders and on November 22, 1943 the Court set these Orders aside and remanded the case to the Commission for further proceedings in accordance with its opinion. The grounds for the reversal were, in substance, that Engineers was entitled to more time to determine whether it desired to retain Virginia Electric and Power Company or Gulf States Utilities Company as its single system and that the interpretation of the Act upon which the Commission directed the divestment of the transportation and other incidental businesses was incorrect. Both the Securities and Exchange Commission and the Company have applied to the Supreme Court of the United States for writs of certiorari which have been granted. No date has now been set for argument.

(b) Excludes reductions (1) as shown separately above and (2) of $1,571,158 in 1942 and $4,148,050 in 1944 related to and applied against items charged directly to surplus. Includes provision for estimated excess profits taxes (after giving effect to the aforesaid reductions) of —0— —0— $ 1,692,689 $ 4,589,567 $ 7,456,110 $ 3,055,790

Note: These income statements should be read in conjunction with the notes to Schedule C-1 insofar as they are applicable.

RECENT SALES OF TRANSPORTATION PROPERTIES

The Company sold all of its transportation properties in Richmond, Norfolk and South Norfolk, Virginia, on December 29, 1944. The effect of the sale of these properties on the net operating revenues of the Company is negligible because of the high Federal excess profits tax rates and the Company's recent policy of absorbing substantially all of the net operating revenues from these operations in depreciation charges which charges were substantially in excess of current depreciation allowable for Federal income tax purposes.

The Company sold its remaining transportation properties on March 31, 1945. The effect of the sale of these properties on March 31, 1945 on the net income of the Company is a reduction of $319,000 based on war time results of the full year 1944.

Federal income taxes as shown above have been reduced through allowance for amortization of emergency facilities by	-0-	-0-	-0-	-0-	$84,497	$523,102	$1,254,290(c)
Earnings per share of common stock, based on 1,909,968 shares, before giving effect to reduction in Federal income taxes resulting from amortization of emergency facilities	-0-	-0-	-0-	-0-	$1.04	$1.02	$.99
(a) Includes provision for estimated excess profits taxes of	-0-	-0-	$314,091	$805,678	$2,173,908	$2,507,130	$1,508,620

(b) Common dividends are currently being paid at the rate of $1,512,000 per year. The Company has covenanted that, so long as any shares of its $4.40 dividend preferred stock remain outstanding, it will not declare or pay any dividend or make any other distribution to the holders of its common stock (other than a dividend in common stock of the Company) except out of net income (as defined in the Company's amended charter) accumulated subsequent to June 30, 1944, after deducting the sum of $16,190 per month in respect of such of the first 120 full calendar months after October 9, 1944 as shall have elapsed; provided, however, that no common stock dividend may be paid in excess of 75% of the net income available as aforesaid, if, after giving effect thereto, the common stock capital and surplus (excluding premiums) would be less than 25% of the Company's capitalization (including surplus but excluding premiums).

(c) Includes accelerated amortization for amount applicable to 1945 due to termination by the President of the United States on September 29, 1945 of the period for amortizing emergency facilities. Tax refunds of approximately $1,163,000 are anticipated for years prior to 1945 due to the shortened emergency amortization period of which $1,073,000 and $90,000 applies to 1944 and 1943, respectively. Such refunds when received will be credited to Earned Surplus.

See note on next page.

Engineers' Exhibit No. 53 (Cont'd)

VIRGINIA ELECTRIC AND POWER COMPANY

Note to Estimated Income Statement Year 1945 Excluding Transportation Operations for 3 Months Ended 3/31/45 (Last 2 Months Estimated) and Pro Forma Income Statement Year 1944 Giving Estimated Effect as at January 1, 1944 to Merger and Sale of Transportation Properties

NOTE A

The provision for Federal taxes on income for the year 1945 was reduced (1) $2,367,940 by reason of deductions for tax purposes of redemption premiums and expenses incurred in refunding of bonds; and (2) $3,939,677 (including $143,808 representing reduction in tax due to carry-back of unused excess profits credit from 1945 to 1943) by reason of deductions for tax purposes of amounts, in excess of depreciation provided for at usual rates, allowable as amortization of emergency facilities under Section 124 of the Internal Revenue Code.

The provision for Federal taxes on income for the year 1944 was reduced (1) $2,091,177 by reason of deductions for tax purposes of redemption premiums and expenses incurred in refunding of bonds; (2) $3,076,274 by reason of deductions for tax purposes of loss on the sale of transportation property in excess of provision for taxes on transportation earnings; and (3) $1,728,651 (including $956,479 representing reduction in tax due to carry-back of net operation loss deduction and unused excess profits credit from 1944 to 1942 and 1943) by reason of deductions for tax purposes of amounts, in excess of depreciation provided at usual rates, allowable as amortization of emergency facilities under Section 124 of the Internal Revenue Code.

Because of the extraordinary deductions enumerated, the Company does not consider that it has any liability for excess profits taxes for 1945 or 1944.

On September 29, 1945 the President of the United States of America issued a proclamation terminating the emergency period and as a result of such proclamation the Company has elected to terminate the amortization period with respect to all emergency facilities effective September 30, 1945. Federal income taxes shown above have been restated to include the reduction resulting from the shortened amortization period. Also, as a result of studies conducted during 1945, the deduction for loss on sale of transporation property as claimed in the returns filed for 1944 eliminates all liabilit for Federal taxes on income for that year and gives rise to possible refunds of taxes of prior years of approximately $2,600,000. Such returns have, however, not as yet been examined by the Treasury Department. Pending such examination the Company has recognized in its accounts only the elimination of tax liability for 1944. The above income statement for 1944 has been correspondingly restated.

ENGINEERS PUBLIC SERVICE COMPANY (INCORPORATED)

Summary of Common Stock Issues

Year	Shares	Price	Amount	
1925	100,000	$11.875	$ 1,187,500.00 (1)	Issued with Allotment Certificates

1933	33	10.00	330.00	Conversion of Scrip
1934	15	10.00	150.00	Conversion of Scrip
1935	151	10.00	1,510.00	Conversion of Scrip
12/31/35	1,909,968	Average 30.40	$58,059,512.85	
5/31/36			56,149,544.85	Reduction of Capital
	1,909,968	Average 1.00	$ 1,909,968.00 (5)	

(1) This amount assigned to common on basis of price paid for 400,000 shares sold at same time to Bankers, who received therewith 200,000 Option Warrants.

(2) Conversion ranged from 21 shares down to 15 shares for each 10 shares of Preferred. Company received $95 for each share of Preferred which price was used as basis for setting up Common issued through conversions.

(3) Warrants were exercisable at $27.50 on or before July 1, 1930 and thereafter at $30 on or before January 2, 1933.

(4) $1.15 per share was credited to Surplus. Rights were issued to all stockholders in the ratio of one new share for each ten shares of Common and $5.50 Preferred; 1½ shares for each ten shares of $5.00 Preferred and ½ share for each 10 option Warrants, holders of record February 14, 1939.

(5) Changed from no par value to $1 par value, effective May 25, 1936.

Engineers' Exhibit No. 57.

For Immediate Release Wednesday, December 31, 1941

SECURITIES AND EXCHANGE COMMISSION
WASHINGTON

Holding Company Act
Release No. 3230

United States of America

Before the Securities and Exchange Commission

At a regular session of the Securities and Exchange Commission, held at its office in the City of Washington, D. C., on the 29th day of December, A. D., 1941.

In the Matter of The Western Public Service Company, a Maryland Corporation The Western Public Service Company, a Delaware Corporation Engineers Public Service Company File No. 70-453 Engineers Public Service Company and Its Subsidiary Companies, Respondents. File No. 59-4 Public Utility Holding Company Act of 1935	Order Granting Applications and Permitting Declarations To Become Effective Pursuant to Sections 7, 10, and 12, and Order of Divestment Pursuant to Section 11 (b) (1)

Engineers Public Service Company, a registered holding company, The Western Public Service Company, a Maryland corporation, and The Western Public Service Company, a Delaware corporation, its subsidiaries, having filed applications and declarations pursuant to Sections 7,

Engineers' Exhibit No. 57 (Cont'd)

10, and 12 of the Public Utility Holding Company Act of 1935 and appropriate rules promulgated thereunder, and also pursuant to instructions 8 (c) to the Uniform System of Accounts for Public Utility Holding Companies, regarding the following transactions:

The contribution by Engineers Public Service Company to The Western Public Service Company, a Maryland corporation, of $1,032,000 principal amount of First Mortgage Bonds, 31,341 shares of Preferred Stock Series A, and 10,000 shares of Preferred Stock Series B of said The Western Public Service Company and the acquisition and retirement of said securities by said The Western Public Service Company, a Maryland corporation;

The amendment of the charter of The Western Public Service Company, a Maryland corporation, so as to change the common stock from no par to $1 par value and the capitalization represented by its common stock from $5,000,000 to $500,000;

The call for redemption by The Western Public Service Company, a Maryland corporation, of 8,292 shares of Preferred Stock, Series A at $27.50 per share plus accrued dividends;

The declaration by The Western Public Service Company, a Maryland corporation, of a dividend in partial liquidation, to Engineers Public Service Company, of all the securities of Missouri Service Company and The Northern Kansas Power Company;

The acquisition by Engineers Public Service Company of all of the securities of The Western Public Service Company, a Delaware corporation, The Northern Kansas Power Company, and Missouri Service Company;

The transfer by The Western Public Service Company, a Maryland corporation, at the direction of Engineers Public Service Company, of all its Wyoming properties to The Western Public Service Company, a Delaware corporation, and the acquisition thereof by said Delaware corporation;

Engineers' Exhibit No. 57 (Cont'd)

The issuance by The Western Public Service Company, a Delaware corporation of the $508,800 5% notes payable and $653,200 of par value common stock and the assumption of $258,000 principal amount of municipal bonds heretofore assumed by The Western Public Service Company, a Maryland Corporation, and the acquisition of said notes and stock by Engineers Public Service Company;

The execution by Engineers Public Service Company of a $300,000 bond of indemnity covering liability for payment of said $258,000 principal amount of municipal bonds;

The method of recordation on the books of Engineers Public Service Company of the securities of The Western Public Service Company, a Delaware Corporation, The Northern Kansas Power Company, and Missouri Service Company to be acquired by it;

All other transactions necesary to facilitate the sale of the Nebraska and South Dakota assets of The Western Public Service Company, a Maryland corporation, to Consumers Public Power District, and instrumentality and political subdivision of the State of Nebraska;

The acquisition and retirement by Engineers Public Service Company of not to exceed 35,000 shares of its own preferred stock outstanding in the hands of the public by invitation for tenders and by open market purchases.

The Commission having heretofore issued its Notice of and Order for Hearing pursuant to Section 11 (b) (1) of the Act, in *Engineers Public Service Company and Its Subsidiary Companies, Respondents,* File No. 59-4, but having as yet issued no order of divestment with respect to The Western Public Service Company, a Maryland corporation, and finding it necessary and appropriate that the applications and declarations in File No. 70-453 should be consolidated with said File No. 59-4;

Engineers Public Service Company having filed its written consent to an order of divestment pursuant to Section 11 (b) (1) of the Act;

Engineers' Exhibit No. 57 (Cont'd)

IT IS ORDERED that the applications and declarations in File No. 70-453 be and they hereby are consolidated with the proceedings in File No. 59-4;

That jurisdiction be and the same hereby is reserved as to the proposed acquisition and retirement by Engineers Public Service Company of not to exceed 35,000 shares of its own Preferred Stock;

That otherwise said applications be and the same hereby are granted and said declarations be and the same hereby are permitted to become effective forthwith.

IT IS FURTHER ORDERED pursuant to Section 11 (b) (1) of the Public Utility Holding Company Act of 1935, that Engineers Public Service Company shall divest itself of its interest in the securities of Missouri Service Company, The Northern Kansas Power Company and The Western Public Service Company, a Delaware corporation, proposed to be acquired by it pursuant to applications and declarations now pending before the Commission in File No. 70-453, if and when Engineers Public Service Company acquires direct ownership of said securities.

IT IS FURTHER ORDERED that Engineers Public Service Company, in accordance with subparagraph (c) of Section 11 of said Act, shall comply with the preceding paragraph of this Order within one year from the date when it acquires direct ownership of said securities, without prejudice to its right to apply for additional time to comply with such Order as provided in such Section.

By the Commission.

Francis P. Brassor,
Secretary.

Engineers' Exhibit No. 68.

MUDGE, STERN, WILLIAMS & TUCKER
(Rushmore, Bisbee & Stern)
20 Pine Street
New York 5, N. Y.

January 22, 1946.

Dear Sirs:

You have requested our opinion with respect to certain Federal income tax questions raised at a hearing held on January 9, 1946 before an examiner of the Securities and Exchange Commission in proceedings with respect to your Company under the Public Utility Holding Company Act of 1935. The request particularly relates to the treatment for Federal income tax purposes of the loss sustained by your Company on the sale in 1944 of shares of stock of Puget Sound Power and Light Company.

It is our understanding and, in fact, it was testified by Mr. S. E. Ratcliffe, an Assistant Treasurer of your Company, at Commission hearings (Trans., p. 475, *et seq.*) that Engineers Public Service Company (Incorporated) (Engineers) and affiliated corporations filed consolidated excess profits tax returns for the years 1941 to 1944, inclusive, and consolidated income tax returns for the years 1942 to 1944, inclusive, that there was a capital loss included in the 1944 consolidated income tax return of approximately $33,000,000 resulting from the sale by you of shares of stock of Puget Sound Power and Light Company, and that approximately $31,000,000 of the loss remains unused. Although Federal income tax and excess profits tax returns for 1945 have not yet been filed, we understand that consolidated returns will be filed.

Under the provisions of the Federal income tax law now in effect a net capital loss for a taxable year may be carried over to the five succeeding years and applied against the

Engineers' Exhibit No. 68 (Cont'd)

net capital gains of each of such five succeeding years. A capital loss may not be used to offset ordinary operating profits. The loss in question was sustained during a consolidated return period and, under the present law and regulations, the loss may be carried over and applied against the net capital gain reflected in the consolidated income tax returns of the same affiliated group for each of the succeeding five taxable years. This capital loss carry-over would be available to the affiliated group for the balance of the five year period if Engineers and any one of the corporations with which it filed a consolidated income tax return for 1944 continued to file consolidated income tax returns. If, therefore, the only remaining members of the affiliated group were Engineers and Virginia Electric and Power Company and they continued to file consolidated returns, the loss in question could be carried over and applied for the indicated period against net capital gains reflected in the consolidated returns.

Under the amended Plan for Divestment of Assets of Engineers pursuant to Section 11(e) of the Public Utility Holding Company Act of 1935, it is contemplated that Engineers will be dissolved but will continue for some time to hold shares of stock of Virginia Electric and Power Company. It is our opinion that for the period after the dissolution but prior to liquidation, Engineers will be treated for Federal income tax purposes as a corporation and will be entitled to the benefits of the net capital loss carry-over from 1944, and that if Engineers and Virginia Electric and Power Company continue to file consolidated returns, this capital loss carry-over may be applied during the balance of the five year period against net capital gains reflected in the consolidated returns. It is also our opinion that the dissolution of Engineers will not terminate its privilege of filing consolidated returns with Virginia Electric and Power Company, and that consolidated returns may be filed while Engineers continues to maintain sufficient stock ownership

Engineers' Exhibit No. 68 (Cont'd)

in Virginia Electric and Power Company to permit the filing of consolidated returns.

If separate returns should be filed for 1946 or a subsequent taxable year, the net capital loss for 1944 could be used in any such year only by Engineers to be applied against the net capital gains of Engineers and the loss could not be used by any other corporation to be applied against its net capital gains.

A question was also asked at the hearing with respect to the tax effect of the proposed sale of stock of The Western Public Service Company. We understand from you that the sale of this stock, pursuant to a contract which has already been entered into, will result in a loss recognized for income tax purposes of approximately $262,000. This loss is of a similar nature to that sustained on the sale of stock of Puget Sound Power and Light Company and the comments we have made with respect to the tax treatment of that loss would be generally applicable. In the light of the large capital loss carry-over from 1944, it would appear that the relatively small loss sustained on the sale of stock of The Western Public Service Company would have no practical tax consequences to Engineers.

At the hearings referred to above, the question was raised as to what advantages might result in the filing of consolidated returns by Engineers and Virginia Electric and Power Company as a result of operating loss carry-overs and carry-backs. Under the present law and regulations, subject to certain limitations, consolidated net operating losses may be carried back to offset consolidated net income of the affiliated group for the preceding two years and any unused balance may be carried forward to offset consolidated net income of such group for the two succeeding years. It is our understanding that there was a consolidated net operating loss for 1944 arising principally from the sale of transportation properties of Virginia Electric and Power Company and increased amortization de-

Engineers' Exhibit No. 68 (Cont'd)

ductions in respect of emergency facilities of Virginia Electric and Power Company due to the termination in September, 1945 of the emergency period, but that this loss has been absorbed by profits of earlier years so that no part of it will be available for 1945 or 1946. We understand from you that a consolidated net operating loss was not sustained for 1945 and that substantial profits are estimated for 1946 so that no question arises as to the carrying backward or forward of an operating loss from either of those years. We also understand from you that in view of the past history of Virginia Electric and Power Company and present known conditions, you would consider the possibility of Virginia Electric and Power Company sustaining operating losses in subsequent years as remote. On the basis of available information, therefore, we should think it unlikely that possible advantages from operating losses would be a factor in any consideration of the advisability of the filing of consolidated rather than separate returns by Engineers and Virginia Electric and Power Company after the affiliated group is reduced to these two corporations.

You will appreciate that the opinions we have expressed are based on existing law and regulations.

Very truly yours,

MUDGE, STERN, WILLIAMS & TUCKER

ENGINEERS PUBLIC SERVICE COMPANY (INCORPORATED) AND SUBSIDIARY COMPANIES

Explanatory Notes to Pro Forma Balance Sheet Consolidated as at June 30, 1945 Giving Effect to (a) Sale of Investment in the Western Public Service Company, Operations for the Period July 1, to December 31, 1945 of Engineers and Virginia, Tax Adjustments by Virginia Resulting From Loss Claimed on Sale of Transportation Properties and Accelerated Amortization of War Facilities Due to Termination of War Emergency Period, Payment on December 31, 1945 of $5,100,000 Notes Payable of Virginia Prior to Maturity and Miscellaneous Adjustments, and (b) the Consummation of Parts I and II of the Plan.

(a) Utility plant (including intangibles) is stated on the following basis:

(1) At original cost for electric, gas and common properties for which studies have been completed and reviewed by Federal and State regulatory bodies, plus plant acquisition adjustments of $11,237,468	$132,427,009
(2) At original cost for gas properties for which studies were filed with State regulatory body during September 1945 plus plant acquisition adjustments of $93,374. Subject to such changes, if any; as may be determined to be necessary upon review of the aforesaid study by the State regulatory body, the subsidiary company during September 1945 provided for the disposition of above amount by charge to earned surplus and contra credit to reserve for amortization of utility plant acquisition adjustments. It is not expected that any material adjustments will be required	5,513,847
Total	$137,940,856

Provisions is being made, pursuant to orders of regulatory commissions, for the amortization of plant acquisition adjustments shown under (1) above by charges to income over 15-year periods commencing in 1943 and 1944.

Engineers' Exhibit No. 71 (Cont'd)

(b) Represents the excess ($12,614,495) of the recorded investment in shares of Virginia over the adjusted net assets applicable to such shares at dates of acquisition, as follows:

Virginia common shares owned by Engineers	2,932,065
Capital represented by such shares	$14,546,228
Acquired surplus	601,539
Total	15,147,767
Cost to Engineers	27,762,262
	$12,614,495

(c) Represented by 1,909,968 shares of $1 par value. Authorized 1,909,968 shares.

(d) Approximately $7,042,000 of the pro forma consolidated earned surplus is not available for the payment of dividends on common stock of Virginia due to covenants made by such company restricting the payment of dividends on common stock, and the parent company earned surplus of $10,660,852 included in the pro forma consolidated earned surplus would not be available for the payment of dividends on its common stock until the $3,000,000 note payable is paid in full.

There is a contingent asset of approximately $2,600,000, representing possible refunds of Federal income and excess profits taxes.

Contingent liability.

An amount in excess of $100 per share and accrued dividends may be payable to the Engineers Preferred Stockholders if the Securities and Exchange Commission and the Courts so determine. It is the opinion of Company counsel that no such additional amount is payable. If the Commission and the Courts determine that the voluntary redemption premium is payable this would amount to $3,204,795.

ENGINEERS PUBLIC SERVICE COMPANY (INCORPORATED) AND SUBSIDIARY COMPANIES

Pro Forma Adjustments to Balance Sheet Consolidated as at June 30, 1945, Giving Estimated Effect to (a) Sale of Investment in the Western Public Service Company, Operations for the Period July 1 to December 31, 1945 of Engineers and Virginia, Tax Adjustments by Virginia Resulting From Loss Claimed on Sale of Transportation Properties and Accelerated Amortization of War Facilities Due to Termination of War Emergency Period, Payment on December 31, 1945 of $5,100,000 Notes Payable of Virginia Prior to Maturity and Miscellaneous Adjustments, and (b) the Consummation of Parts I and II of the Plan.

Engineers' Exhibit No. 74.

STANDARD & POOR'S STOCK QUALITY RATINGS

A** Highest grade preferred stocks which have demonstrated their ability to pass successfully through prolonged periods of depression. Dividend records are long and unbroken, and the equity in assets is strong.

A* High grade preferred stocks, with dividends earned by a wide margin even during periods of general business depression. Dividend records are long and favorable, and the equity in assets is large.

A Sound grade preferred stocks, with dividends earned by an adequate margin even in periods of general business depression. The dividend record is favorable, and the equity in assets is good.

B** Medium grade preferred stocks, with dividends earned by an adequate margin except in periods of severe depression. The dividend record is good, but not necessarily unbroken, and the equity in assets is ample. Such stocks are a "business risk," and their position is largely contingent upon earnings.

B*-B Speculative preferred stocks, generally in the dividend paying class. Payments either have a small margin of protection in earnings, or for some other reason their continuation is not assured.

C** Preferred stocks with erratic dividend records, and which can be expected to make payments only under favorable conditions.

C* Non-dividend paying preferreds showing very small or no earnings available for dividends. Entirely speculative, but not without hope of improvement.

C Non-dividend paying preferreds which show no earnings available for dividends and without much prospect of any early payments.

Engineers' Exhibit No. 74

D** Preferreds with little apparent equity and whose future is entirely contingent upon unforeseen developments.

D* Showing default, receivership or similar unfavorable condition. Some equity, however, may be saved to stockholders through reorganization or other readjustment.

D Applied to preferreds which, owing to default or enforcement of prior liens, appear to be worthless, from a practical standpoint, although occasionally dealt in by speculators.

Engineers' Exhibit No. 75.

STANDARD & POOR'S MARKET RATINGS

Purpose of the Ratings

Standard & Poor's Stock Ratings express the *relative* degree of market attraction at the time the current bulletin is published. Since the rating is, of necessity, limited to a word or two, it is obviously impossible to explain the basis of attraction or lack of attraction, the type of portfolio for which the stock is suitable, or the extent to which the fundamental position of the company, its long term earnings trend, temporary industry or stock market factors enter into the determination of the current rating. These complete expressions of opinion are to be found in Standard & Poor's Industry Surveys and Standard & Poor's Guide Reports.

With these limitations in mind the stock ratings will be found highly useful as a quick check of a security or list of securities to determine whether further investigation is necessary. They are particularly helpful in checking portfolios to determine weak spots that should be eliminated and in selecting new securities for replacement or employment of idle funds. For the latter purpose, two lists of common stocks are presented on pages 2 and 3. The list on page 2 includes stocks rated Buy for appreciation; the list on page 3 consists of the most attractive income issues.

Explanation of Ratings

The market rating is designed to characterize the current stock market position of individual securities and is never a guide to the fundamental quality of the security or the strength of the company represented. As a result, there are times when securities of a well-entrenched organization in a prospering industry may carry a Switch rating because they are over-priced. Conversely, the stock of a marginal enterprise may at times be so deflated as to give it speculative attraction.

Engineers' Exhibit No. 75 (Cont'd)

Buy—This rating is assigned to stocks that are judged to be in the most favorable position in relation to the market as a whole. These are shares with the brightest earnings prospects, holding promise of outstanding market performance because of some special development, judged to be far under-priced, or outstandingly attractive for income.

Above Average—Stocks carrying this rating are relatively well situated with respect to market or income prospects, but for one reason or another do not measure up to a BUY rating. Under normal conditions, stocks rated ABOVE AVERAGE are suitable holdings on the expectation of relatively favorable market performance or dividend return. However, they carry a somewhat higher degree of risk, enjoy a less active market, or for some other reason have less general attraction than BUY issues.

Average to Below—Common and preferred stocks in this classification are (1) those that are expected to move more or less in line with the general market or usually offer no better than average yields or (2) stocks which have definitely sub-average income or market attraction, but with some factor in the situation which dictates against an outright SWITCH rating. It will ordinarily be possible to strengthen portfolios by replacing stocks in this group with those rated BUY or ABOVE AVERAGE and, when general market policy warrants increasing cash reserves, these shares become candidates for liquidation.

Switch—Normally, the bulk of shares rated SWITCH are fundamentally undesirable, though the group will, at times, include sound stocks that have over-discounted earnings or dividend prospects. As a general rule, SWITCH-rated stocks should be disposed of promptly.

Engineers' Exhibit No. 79 (Cont'd)

in respect of the common stock of each thereof (in the case of Gulf States, the Preferred Stock also) and (2) for pre-emptive rights to the holders of common stock of each thereof in respect of common stock, or securities convertible into such stock, issued for cash, except in respect of any such stock or securities issued in connection with a public offering; and Engineers hereby agrees that at each such stockholders' meeting it will vote all shares of such company then held by it in favor of the adoption of such amendment, and upon the appropriate approval thereof by the stockholders, will cause an appropriate amendment to each of said charters to be properly filed in such a manner as to make such amendment effective; all subject, however, to any necessary approval of any public service commissions or other regulatory bodies having jurisdiction thereof.

We wish to advise you that the proposed organization of Engineers after the distribution of all of the securities owned by it except 162,612 shares of Common Stock of Virginia Electric and Power Company will be as follows:

Jason C. Leighton, President and Treasurer, with salary of	$18,000 per year
Part time services of tax consultant	6,000 " "
	$24,000
Estimated overhead including two clerical assistants who would also serve as officers of the Company	$24,000
One Transfer Agent and Registrar	20,000
Total estimated annual expense of operation	$68,000

There would be no income to Engineers until June 15, 1948 since the Common Stock of Virginia Electric and Power Company is not expected to pay dividends until that time. It is estimated that the annual dividend rate on Virginia

Engineers' Exhibit No. 79 (Cont'd)

Common Stock would be $1 per share so that the Company would receive (assuming the present rate of common dividends are maintained) $162,612 per year after June 15, 1948 until the stock was either sold or distributed. The sole purpose of the Company after its dissolution would be to marshal its assets and pay its liabilities with the retention of 162,612 shares of Virginia Common Stock, which, in the judgment of the Management, will reasonably provide for the satisfaction of possible contingent liabilities. Upon the final satisfaction of these liabilities, the balance of the Virginia Common Stock held by the Company or the net proceeds thereof together with other cash, if any, held by the Company, would be distributed pro rata to the Common Stockholders of Engineers in exchange for their Engineers Common Stock certificates.

There is attached hereto as Exhibit B copy of cash estimate as of March 24, 1947 from which estimate it will be seen that Engineers expects to have by that date sufficient cash to carry out the Plan.

There is attached hereto as Exhibit C copy of tentative time schedule. Changes in this schedule will necessarily have to be made to accord with the times by which the Commission and the District Court take action on the enclosed Plan. The dates mentioned for Commission and Court action are merely estimates by the Company.

There is attached hereto as Exhibit D copy of proposed letter to Preferred and Common Stockholders of the Company summarizing the amended Plan, with which would be enclosed a copy of the notice issued by the Commission concerning the filing of this Amendment.

Engineers' Exhibit No. 79 (Cont'd)

ENGINEERS PUBLIC SERVICE COMPANY
(Incorporated)

Plan Pursuant to Section 11(e) of the

PUBLIC UTILITY HOLDING COMPANY ACT OF 1935 FOR DIVESTMENT OF ASSETS AND RELATED MATTERS

DIVISION A

Purposes of Plan

1. Compliance with orders of the Securities and Exchange Commission ("the Commission") directing the divestment by Engineers Public Service Company (Incorporated) ("Engineers") of its interest in El Paso Electric Company ("El Paso") and Gulf States Utilities Company ("Gulf States").

2. The divestment by Engineers of its interest in Virginia Electric and Power Company ("Virginia").

3. The retirement of the Preferred Stock of Engineers at $110 per share and accrued dividends in the case of the $6 Cumulative Dividend Preferred Stock and the $5.50 Cumulative Dividend Preferred Stock and at $105 per share and accrued dividends in the case of the $5 Dividend Convertible Preferred Stock.

4. The dissolution and liquidation of Engineers.

DIVISION B

Introductory Statement

Engineers, organized and existing under the laws of the State of Delaware, is a registered holding company under the Public Utility Holding Company Act of 1935 ("the Act").

Engineers' Exhibit No. 79 (Cont'd)

Engineers holds the following securities:

150,000 shares of Common Stock without par value of El Paso, being all of the authorized and issued Common Stock of said Company. These shares are to be reclassified into 381,994 shares of Common Stock, without par value, prior to the divestment of El Paso by Engineers.

280,000 shares of Common Stock without par value of Gulf States, being all of the issued Common Stock of said Company, there being 20,000 shares of such Common Stock authorized but unissued. The 280,000 outstanding shares of Common Stock are to be reclassified into $1,909,968 shares of Common Stock, without par value, prior to the divestment of Gulf States by Engineers.

2,932,065 shares of Common Stock without par value of Virginia Electric and Power Company ("Virginia"), there being, in addition, 6,360 shares of such Common Stock in the hands of the public and 20 shares of such Common Stock reserved for scrip and 1,061,555 shares of such Common Stock authorized but unissued.

Engineers has outstanding the following securities:

143,951 shares of $5 Dividend Convertible Preferred Stock ("$5 Preferred") without par value, entitled to receive $100 per share, plus accrued dividends, in involuntary liquidation and $105 per share, plus accrued dividends, on redemption or voluntary liquidation.

183,406 shares of $5.50 Cumulative Dividend Preferred Stock ("$5.50 Preferred") without par value, entitled to receive $100 per share, plus accrued dividends, in involuntary liquidation and $110 per share, plus accrued dividends, on redemption or voluntary liquidation.

Engineers' Exhibit No. 78 (Cont'd)

Engineers' Exhibit No. 79 (Cont'd)

65,098 shares of $6 Cumulative Dividend Preferred Stock ("$6 Preferred") without par value, entitled to receive $100 per share, plus accrued dividends, in involuntary liquidation and $110 per share, plus accrued dividends, on redemption or voluntary liquidation.

1,909,968 shares of Common Stock of the par value of $1 per share.

Early in 1940 the Commission brought a proceeding against Engineers and its subsidiaries under Section 11(b)(1) of the Act. This Section provides for the restriction of integrated systems and incidental businesses which a holding company may control. On July 23, 1941, the Commission issued an order in that proceeding directing Engineers to dispose of its interest in The Key West Electric Company and Puget Sound Power & Light Company. This order has been fully complied with. On December 29, 1941, the Commission issued a further order under Section 11(b)(1) directing Engineers to dispose of its interest in Missouri Service Company, The Northern Kansas Power Company and The Western Public Service Company. This order also has been fully complied with. On September 16, 1942 and October 6, 1942, the Commission issued further orders under the same Section directing Engineers to dispose of all of its remaining investments except that in Virginia, which, if retained, must dispose of its gas and transportation operations. Engineers has complied with these 1942 orders by disposing of all of the investments ordered divested by those orders except its investments in Gulf States, El Paso and Virginia and with respect to the latter two companies, has partially complied with said orders by the disposal of their transportation properties. Engineers filed a petition with the United States Court of Appeals for the District of Columbia, for a review of the 1942 orders and on November 22, 1943, the Court set these orders aside

Engineers' Exhibit No. 79.

SECURITIES AND EXCHANGE COMMISSION
Eighteenth and Locust Streets
Philadelphia 3, Pennsylvania

ENGINEERS PUBLIC SERVICE COMPANY
(Incorporated)

File No. 54-132

AMENDMENT NO. 5 TO APPLICATION DATED SEPTEMBER 10, 1945

Engineers Public Service Company (Incorporated) hereby further amends the Plan pursuant to Section 11(e) of the Public Utility Holding Company Act of 1935 for Divestment of Assets and Related Matters of Engineers Public Service Company (Incorporated) by striking out all of said Plan as heretofore filed and amended and inserting in lieu thereof the Plan attached hereto as Exhibit A-2.

If the Commission shall find such Plan, as amended as aforesaid, necessary to effectuate the provisions of Subsection (b) of the Public Utility Holding Company Act and fair and equitable to the persons affected thereby and shall make an order approving such Plan, Engineers hereby requests the Commission to apply to an appropriate district court of the United States in accordance with the provisions of Section 11 (e) and Subsection (f) of Section 18 of the Act to enforce and carry out the terms and provisions of said Plan as amended as aforesaid.

Engineers agrees that it will cause Virginia, Gulf States and El Paso to take such corporate action as shall be necessary to submit to the stockholders of each such company at a meeting thereof to be held prior to the date on which the court of competent jurisdiction shall hear the application of the Securities and Exchange Commission for an order of such court to enforce and carry out said Plan as amended hereby, an amendment to the charter of each thereof providing (1) for cumulative voting for the election of directors

Engineers' Exhibit No. 79 (Cont'd)

and remanded the case to the Commission for further proceedings in accordance with its opinion.

The Supreme Court of the United States granted writs of certiorari to both the Commission and Engineers but the case has not yet been decided.

DIVISION C

The Plan

1. Engineers, except as below provided, will mail warrants to its Common Stockholders of record on a date to be fixed by the Board of Directors of Engineers, each of which warrants will evidence the right to acquire from Engineers shares of Gulf States Common Stock (reclassified) on the basis of one share of Gulf States Common Stock for each share of Engineers Common Stock held by such Stockholders on such date either

   (a) by purchasing from Engineers whole shares of such Gulf States Common Stock at the rate of $11.50 per share, or in the alternative,

   (b) by exchanging with Engineers whole shares of Engineers Preferred Stock for shares of Gulf States Common Stock on the basis of equivalent values, assigning $11.50 per share for each share of Gulf States Common Stock and $105 plus accrued dividends to the expiration date of the warrant for each share of $5 Preferred and $110 plus accrued dividends to the expiration date of the warrant for each share of $5.50 Preferred and $6 Preferred; provided that, on the basis of the relative values above stated, the value of the whole shares of Engineers Preferred Stock surrendered in exchange shall not exceed the value of the shares of Gulf States Common Stock which the warrant holder is entitled to and in-

Engineers' Exhibit No. 79 (Cont'd)

tends to acquire, but to the extent that the value of such shares of Engineers Preferred Stock surrendered in exchange is less than the value of such shares of Gulf States Common Stock to which the warrant holder is entitled and intends to acquire, the difference shall be paid by the warrant holder to Engineers.

The Board of Directors of Engineers may, however, withhold the mailing of such warrants in the event that, in its opinion, market conditions are such as to render it inadvisable to proceed with the issuance of the warrants. Upon the mailing of such warrants, the Plan shall be deemed effective. In cases where the addresses of such Stockholders are unknown or are outside continental United States and Canada, warrants will not be mailed to Common Stockholders of this Company of record on such date but will be held in the name of Transfer Agent against instructions of the record owners, or their duly authorized agents, until the opening of business on the second business day before the expiration date of the warrant period, at which time all warrants so held with respect to which no such instructions have been received shall, subject to the provisions of paragraph 9 hereof, be sold by the Company and the pro rata share of the aggregate net proceeds, if any, remitted to each Stockholder on whose behalf warrants are so sold, or, in cases where such remittance is not lawful or the address is unknown, held for the account of each such Stockholder subject to payment upon receipt of lawful instructions. In cases where the Engineers' Common Stockholder cannot be located and where no valid claim is made for such net proceeds within a period of ten years from the effective date of the Plan, such net proceeds shall be paid to Gulf States. The warrants must be exercised on or before a speci-

Engineers' Exhibit No. 79 (Cont'd)

fied date (to be approximately sixteen days after the date of mailing warrants). All warrants will be registered in the names of the Common Stockholders, except as above provided, and will be transferable on the books of Engineers. Such warrants will be issued and distributed without the surrender by the Common Stockholders of Engineers of their Common Stock certificates.

2. The Transfer Agent will mail or deliver certificates for Gulf States Common Stock to those persons who exercise the warrants. To the extent warrants are not exercised, Engineers shall sell shares of Gulf States Common Stock represented thereby as promptly thereafter and in such manner as the Board of Directors of Engineers deems to be in the best interests of Engineers, subject to the provisions of paragraph 9 hereof.

3. Engineers will deposit in trust for the benefit of its Preferred Stockholders with a solvent bank or trust company an amount equal to $105 per share plus accrued dividends to the date of such deposit for each share of $5 Preferred and $110 per share plus accrued dividends to the date of such deposit for each share of $5.50 Preferred and $6 Preferred not surrendered in exchange pursuant to (b) of paragraph 1 and will give to all holders of such Preferred Stock five days' prior notice of such deposit at their respective registered addresses, and such notice shall state that upon surrender by the Preferred Stockholders of their certificates for Preferred Stock to the Transfer Agent, they will be paid $105 per share plus such accrued dividends for each share of $5 Preferred and $110 per share plus such accrued dividends for each share of $5.50 Preferred and $6 Preferred; and from and after the date of such deposit, dividends on the Preferred Stock will

Engineers' Exhibit No. 79 (Cont'd)

cease and determine. Such deposit will be in cancellation of the whole of the outstanding Preferred Stock of Engineers. The President or a Vice President and the Secretary or an Assistant Secretary of Engineers shall, without further action by Directors and Stockholders of Engineers, file a certificate or certificates of Engineers reflecting the elimination of the capital represented by the Preferred Stock and the elimination of the authorized Preferred Stock in the Office of the Secretary of State of the State of Delaware and shall record in the office of the Recorder of Deeds of New Castle County, Delaware, a copy or copies thereof certified by the Secretary of State.

4. Immediately after filing the certificate provided for in paragraph 3, the President or a Vice President, and the Secretary or an Assistant Secretary, of Engineers, shall without further action by the directors or stockholders of Engineers:

(1) Deposit for filing in the office of the Secretary of State of the State of Delaware, a certificate signed by them and verified by the oath of one of said officers, which shall state that Engineers is dissolved, in which certificate there shall be included a list of names and residences of the directors and officers of Engineers as of the date of such filing;

(2) deposit for recordation in the office of the Recorder of Kent County, Delaware, being the county in which the principal office of Engineers is maintained, a duplicate original of the certificate referred to in (1) above;

(3) cause to be published a copy of such certificate in one issue of a newspaper published in Kent County, Delaware, being the county in which the

Engineers' Exhibit No. 79 (Cont'd)

principal office of Engineers in the State of Delaware is situated; and

(4) deposit for filing in the office of the Secretary of State of the State of Delaware an affidavit of the Manager or Publisher of the newspaper referred to in (3) above, that said certificate has been published one time in said newspaper;

and thereupon, when the steps specified in (1), (2), (3) and (4) above shall have been taken, the dissolution of Engineers shall thereby become effective.

5. Promptly after the dissolution of Engineers shall have so become effective Engineers will distribute (1) all of the Common Stock (reclassified) of El Paso pro rata to the Engineers Common Stockholders, on the basis of one-fifth of a share of El Paso Common Stock for each share of Engineers Common Stock and (2) approximately 94.4% of the Common Stock of Virginia pro rata to the Engineers Common Stockholders on the basis of 1.45 shares of Virginia Common Stock for each share of Engineers Common Stock. Such distribution will be without the surrender by the Common Stockholders of Engineers of their Common Stock certificates. No fractional shares of Common Stock of either El Paso or Virginia will be issued or delivered, but in lieu thereof scrip will be issued and delivered. Such scrip will not be entitled to dividends, voting rights or any other stockholders' rights. When combined in lots aggregating one or more full shares of stock, scrip may, up to the date of sale (hereinafter in this paragraph described) of such shares of stock, be exchanged for such shares, together with any dividends which shall have been paid to Stockholders of record on any date subsequent to the effective date of the Plan and prior to the date of such exchange. Engi-

Engineers' Exhibit No. 79 (Cont'd)

neers will undertake to provide facilities whereby, prior to the date on which the distribution referred to in this paragraph is made, any holder of scrip certificates may dispose of such scrip, or acquire additional scrip so as to enable the holder to exchange such scrip for full shares of stock. All shares of stock reserved for delivery upon the exchange of scrip which shall not have been delivered in connection with such exchange within two years after the effective date of the Plan, shall, promptly after the expiration of such period and subject to the conditions of paragraph 9 hereof, be sold by the Transfer Agent and the Transfer Agent shall, as soon as possible thereafter, distribute to the holders of scrip certificates not theretofore surrendered their proportionate part of the net proceeds of sale, plus their proportionate part of any dividends which shall have been declared to holders of record as of a date after the effective date of the Plan and prior to the date of sale. In cases where the Engineers' Common Stockholders cannot be located and where no valid claim is made for the net proceeds from the sale of stock and the proportionate part of dividends referred to above and within a period of ten years from the effective date of the Plan, such net proceeds and proportionate part of dividends shall be paid, with respect to net proceeds of El Paso stock and dividends, to El Paso, and with respect to net proceeds of Virginia stock and dividends, to Virginia.

In cases where the Engineers' Common Stockholder cannot be located and where no valid claim is made for the whole shares of El Paso and Virginia Common Stocks distributable to such stockholder within a period of ten years from the effective date of the Plan, such shares of stock shall be returned to the issuing Company for cancellation and the claims

Engineers' Exhibit No. 79 (Cont'd)

to dividends payable to holders of record of said shares after the effective date of the Plan shall be cancelled.

6. After the dissolution of Engineers shall have been effective as aforesaid, Engineers shall, nevertheless, be continued as a body corporate for the purposes and for the term specified in Section 42 of the General Corporation Law of the State of Delaware, and Engineers, acting under the direction of its Board of Directors, shall collect its assets and settle its debts and liabilities, with full power, subject to the provisions of paragraph 9 hereof, to sell and dispose of any or all of the assets of Engineers not distributed as aforesaid. Any vacancy occurring in the Board during the continuance of Engineers as a body corporate as aforesaid may be filled by the Board, as provided in its By-laws. After the final settlement of the affairs of Engineers and payment of or provision for its debts and liabilities, the Directors shall cause the distribution to the Engineers Common Stockholders of the remaining assets of the Company either in kind or in cash in exchange for their certificates of Engineers Common Stock. The Directors shall have power to authorize an agent to vote all shares of Virginia Common Stock held by the Company at any time after the making of the distribution referred to in paragraph 5 above at all meetings of stockholders at which such stock is entitled to vote except as to any matter which is being contested by any stockholder.

7. Within 60 days after the dissolution of Engineers shall become effective in accordance with paragraph 4 above, Epsco, Inc., the mutual service corporation, will cancel its service contracts with Engineers, Virginia, Gulf States and El Paso, and Epsco, Inc. will then be dissolved and liquidated.

Engineers' Exhibit No. 79 (Cont'd)

8. Engineers will pay all fees and expenses by whomsoever incurred in connection with the Plan or the proceedings in respect thereto, to the extent approved by the Commission.

9. Sales by Engineers of warrants in cases where the addresses of stockholders are unknown or are outside the Continental United States or Canada provided to be made under the provisions of paragraph 1 above, by Engineers of shares of Gulf States Common Stock represented by warrants not exercised provided to be made under the provisions of paragraph 2 above, by Engineers of any assets not distributed provided to be made under the provisions of paragraph 6 above, and by the Transfer Agent of shares of stock of Virginia and El Paso, represented by scrip, which shall not have been delivered in connection with the rights of combination of such scrip provided to be made under the provisions of paragraph 5 above, shall all be made subject to the following provisions: Engineers or the Transfer Agent, as the case may be, may sell such warrants or shares of stock on the New York Stock Exchange without further action by the Commission, but neither the Company nor the Transfer Agent shall sell any such warrants or shares in any other manner unless the Company or the Transfer Agent, as the case may be, shall by telephone or telegraph have given to the Commission at least 24 hours prior notice of its intention so to do and of the details in respect thereof. Upon the expiration of such 24 hour period the Company or the Transfer Agent, as the case may be, may proceed with such sale in the manner specified in such notice unless during such period the Company or the Transfer Agent, as the case may be, shall have been informed by the Commission that the Commission intends to issue an order to show cause why the sale should be

Engineers' Exhibit No. 79 (Cont'd)

consummated, in which event such sale shall not be consummated without the approval of the Commission.

Engineers believes and alleges that the approval of this Plan is necessary for compliance with the orders issued by the Commission on September 16, 1942 and October 6, 1942 under Section 11 of the Act and to effectuate the provisions of subsection (b) of Section 11 of the Act, and if the Commission shall find the Plan necessary to effectuate the provisions of subsection (b) of Section 11 of the Act and fair and equitable to the persons affected thereby, Engineers prays that the Commission shall enter an order approving the Plan containing a recitation that the relevant transactions of the Plan are necessary or appropriate to the integration or simplification of the holding company system of which Engineers is a member and necessary or appropriate to effectuate the provisions of subsection (b) of Section 11 of the Act, all in accordance with the meaning and requirements of the Internal Revenue Code, as amended, including Sections 371 and 1808(f) and Supplement R thereof.

DIVISION D

Conditions to Effectuation of the Plan

The effectuation of the Plan is dependent upon the satisfaction of the following conditions:

1. Gulf States shall have reclassified its Common Stock into 1,909,968 shares of Common Stock, without par value; Gulf States shall have given to its Preferred Stock seven votes per share instead of the one vote per share it now carries; El Paso shall have reclassified its Common Stock into 381,994 shares of Common

Engineers' Exhibit No. 79 (Cont'd)

Stock, without par value; and the charters of Virginia, Gulf States and El Paso shall have been amended to provide for cumulative voting in respect of the Common Stock (in the case of Gulf States, the Preferred Stock also) for the election of Directors and for pre-emptive rights to Common Stockholders to subscribe for additional Common Stock issued for cash except in the case of public offerings.

2. The Commission shall have issued the order prayed for.

3. The Commission shall have instituted a proceeding in a court of competent jurisdiction pursuant to Section 11(e) of the Act and such court shall have entered a decree or order for the purpose of enforcing the Plan.

4. There shall have been obtained from the United States Treasury Department (unless Engineers, in its discretion, shall waive this condition) a closing agreement or ruling or closing agreements or rulings as to the tax consequences of the transactions necessary to carry out the Plan and such agreements or rulings shall be satisfactory to counsel for Engineers.

5. Any corporate action in connection with the Plan, which may be deemed necessary by counsel for Engineers shall have been carried out in a manner satisfactory to such counsel.

6. Authorization satisfactory to counsel for Engineers shall have been given for the carrying out of the Plan and for the issuance for all securities provided to be issued pursuant to the Plan, by all regulatory commissions, the consent of which is legally necessary.

7. The warrants referred to in paragraph 1 of the Plan shall have been mailed to Engineers Common Stockholders within the exceptions therein provided.

Engineers' Exhibit No. 79 (Cont'd)

DIVISION E

Amendments to the Plan and Other Provisions

Until approved by the Commission, the Plan may be modified or amended in any respect or particular by Engineers. After being approved by the Commission and before being approved by a court, the Plan or any part thereof may be modified or amended in any respect or particular by Engineers with the approval of the Commission. After the approval by the Court and before the Plan has been consummated, pursuant to the order or decree of a court of competent jurisdiction, the Plan may be modified or amended in any respect or particular by Engineers with the approval of both the Commission and the Court. No amendments to the Plan shall be made without the consent or agreement of Engineers.

Engineers may employ such agents, attorneys or others as it may deem desirable for the purpose of carrying out the Plan. Engineers may from time to time delegate to others any power or discretion conferred upon it by the Plan.

The statements, opinions and conclusions contained in the Plan are intended solely for the purpose of assisting the Commission, any court and the Stockholders in any steps or proceedings with respect to the Plan and are not intended for use or information by prospective purchasers of any securities whether now existing or proposed to be issued or for any purposes other than the purposes set forth in this paragraph; and no one is authorized to make any statements regarding the Plan, whether with reference to any securities referred to herein or otherwise which are not set forth herein.

Exhibit B

ENGINEERS PUBLIC SERVICE COMPANY

Cash Estimate—March 24, 1947

Cash required for preferred stock	
Principal of preferred stock	$39,246,000
Call premium	3,205,000
	42,451,000
Cash sources	
Treasury cash before special dividends, estimated March 24, 1947	17,000,000 (4)
Proceeds Gulf States warrants at $11.50	22,000,000
Special dividends as follows:	
Virginia Electric and Power Company (1)	2,932,000
Gulf States Utilities Company (2)	756,000
El Paso Electric Company (3)	105,000
	42,793,000
Cash required as above	42,451,000
Balance for retirement allowances, expenses of distribution, operation of Company until June 15, 1948 and contingencies	$ 342,000

Notes

(1) Declared December 13, 1946 contingent upon the issuance of an order of the Court effectuating the plan and payable 10 days after the issuance of such order. Except for the regular quarterly dividend normally payable in March, 1947, no further common dividends to be paid until June 15, 1948.

(2) Directors stated intention December 13, 1946 to declare, contingent upon the issuance of an order of the Court effectuating the plan and payable 10 days after the issuance of such order. Except for the regular quarterly dividend normally payable in March, 1947, no further common dividends to be paid until December 15, 1947.

(3) Declared December 13, 1946 payable December 27, 1946.

(4) Includes $1,223,516 regular quarterly dividends normally payable March 15, 1947. Cash balance December 13, 1946 is approximately $17,000,000, after deduction of Preferred Stock dividends payable January 2, 1947.

Engineers' Exhibit No. 79 (Cont'd)

Exhibit C

December 16, 1946

PROGRAM

ENGINEERS

Date December 1946

13 Hold Engineers Directors meeting to:

(a) authorize officers to amend Plan, amendment No. 5 and to take action in connection therewith.

(b) authorize mailing of letter to Preferred and Common Stockholders.

Hold Gulf States Directors' Meeting to state intention of Directors to declare one-half year's dividend on the common stock payable ten days after the district court issues an order enforcing the Plan, to holders five days after such action.

Hold El Paso Directors' Meeting to declare dividend of 70 cents per share on the common stock payable on December 27, 1946.

Hold Virginia Directors' Meeting to declare one full year's dividend in advance, payable at the same time as provided for in the Gulf States action, and in addition, the Virginia Directors will consider taking action to:

(a) appoint the Chase National Bank of the City of New York and State Planters Bank & Trust Company as transfer agents for the Common Stock and Manufacturers Trust Company and Central National Bank of Richmond as Registrars for the Common Stock, and

(b) authorize officers to make application for listing and registration of the Common Stock on the New York Stock Exchange.

The above action has been taken, also the El Paso and Virginia Directors authorized taking of action necessary in connection with charter amendments.

17 File amendment #5 to Plan.

18 File amendments to Gulf States and El Paso declarations providing for cumulative voting and preemptive rights and file original declaration of Virginia to take same action.

Engineers' Exhibit No. 79 (Cont'd).

Date	
December 1946	
19	SEC* issues notice of filing of amendment.
	File State applications for approval of charter amendments wherever required.
20	Mail SEC notice to Common and Preferred Stockholders, together with copy of amended Plan.
Date	
January 1947	
2	SEC files application with the District Court requesting enforcement of the Plan and the Court fixes a date (February 10*) for hearing on the Plan. Mail notices to the Stockholders of the date of the Court hearing.
10	Mail notices of Gulf States and Virginia Stockholders' Meetings to be held January 30, 1947, with holders of record January 20 entitled to vote.
	Hold Gulf States Directors' Meeting to:
	(a) Call Special Stockholders Meeting to be held on January 30, to amend charter. Record date to be January 20.
	(b) Approve new form of Gulf States Common and Preferred Stock Certificates.
	(c) Authorize Stone & Webster Service Corporation Transfer Agent, to issue increased number of Common shares, subject to filing of Charter Amendment.
	(d) Appoint The Chase National Bank as Transfer Agent and State Street Trust Company and Central Hanover Bank and Trust Company as Registrars of the Common Stock and authorize them to take appropriate action in connection with issuance of Common Stock.
	(e) Authorize listing and registration of Common Stock on New York Stock Exchange, both on a "when distributed" and on an issued basis.

* Whenever in this program a date is mentioned for SEC or court action, it is only the best estimate of the Engineers' management and is not intended to indicate that the management thinks that these are the date by which either the SEC or the court should take any action. It may well be, and probably will be, that the SEC and the court will take action on either earlier or later dates than those set forth in this program, but the primary purpose of the program is to indicate the timing between each of the steps required to be taken once the regulatory agencies and court have acted.

Engineers' Exhibit No. 79 (Cont'd)

Date January 1947	
	(f) Authorize registration of Common Stock under the Securities Act of 1933 and filing of registration statement in connection therewith. (No U-1 required.)
	(g) Declare special dividend equal to two regular quarterly dividends payable March 10, 1947 subject to the issuance of the court order prior to the payment date.
	Order imprinting of Gulf States Preferred Stock certificates to reflect charter amendment and order new supply of such Preferred Stock certificates.
13	File with SEC and Department of Stock List, New York Stock Exchange, the following documents relating to Gulf States Common Stock:
	Form 1-J—Application for registration of warrants for "when issued" dealing.
	Form 15-AN—Application for registration of warrants for issued dealing.
	Form 8-A—Application for registration for "when distributed" and issued dealing in Gulf States Common Stock.
	New York Stock Exchange Form of Listing Application for Gulf States Common Stock.
	File Forms 1-J, 15-AN and 8-A with SEC.
	Order supply of warrants and have delivered to S. & W. Service by January 20 and to Chase by January 31.
	Order supply of Gulf States Common Stock Certificates for delivery to Stone & Webster Service by February 26 and to Chase by March 3.
	Order supply of El Paso Common Stock and Scrip Certificates and Virginia Common Stock and Scrip Certificates for delivery to Stone & Webster Service by March 15 and to Chase (no Scrip) by April 3.
	Authorize Stone & Webster to fill in subscription warrants with names, addresses and amounts.
20	Record date for determination of Gulf States and Virginia Stockholders entitled to vote at Special Stockholders' Meetings to be held January 30.
28	90 day notice to Stone & Webster Building terminating lease of fifth floor space as of April 30, 1947.
	Orders of all regulatory Commissions, both State and Federal, required in connection with the amendments of the charters of Virginia, Gulf States and El Paso should be issued by this date.

Engineers' Exhibit No. 79 (Cont'd)

Date	
January 1947	Hold El Paso Directors Meeting to:
	(a) Call Stockholders' Meeting to be held on waiver on January 30, 1947, to amend charter.
	(b) Adopt new form of Common Stock certificates.
	(c) Appoint State Street Trust Company, Registrar.
	(d) Authorize Stone & Webster Service Corporation, Transfer Agent, and State Street Trust Company to take action in connection with the increased number of shares.
30	File Form S-1 for Gulf States Common Stock.
	Hold Special Stockholders' Meetings of Virginia, Gulf States and El Paso, the El Paso meeting to be held on waiver.
Date	
February, 1947	
1	File Virginia, Gulf States and El Paso charter amendments with State authorities.
10	Hearing before U. S. District Court for the District of Delaware on the Plan.
10	Receive deficiency memo. on Gulf States Common Stock Form S-1.
11	New York Stock Exchange gives necessary certification to SEC of Forms 1-J, 15-AN and 8-A subject to receipt of notice from Engineers that Court order is issued and record date for warrants has been fixed.
17	Court order issued.
18	File amendment for Gulf States Common Stock, Form S-1, curing deficiencies and reflecting issuance of Court order and obtain order of SEC under 33 Act.
	Hold Engineers Directors' Meeting to:
	(a) Take action in connection with issuance of warrants, including:
	(1) Approval of form of warrant.
	(2) Fix February 28 as the record date for warrants.
	(3) Authorize mailing of immediate notice to Engineers Common Stockholders of record date for warrants and copy of prospectus and subsequent letter to them after record date enclosing warrants.
	(4) Authorize listing and registration of warrants on New York Stock Exchange on a "when issued" and issued basis.

Engineers' Exhibit No. 79 (Cont'd)

Date	
February 1947	
	(5) Authorize Stone & Webster to issue and mail warrants to Stockholders, subject to taking of final action by Directors on February 26.
	(6) Authorize The Chase Bank to accept subscriptions, transfer and split up warrants and deposit proceeds and hold Engineers Preferred.
	Mail notice to Common Stockholders advising them of record date for subscription warrants and that warrants will be mailed to them on record date.
	Notify New York Stock Exchange of record date on warrants and filing of Gulf States charter amendment and request that "when issued" dealings in the warrants and "when distributed" dealings in the Gulf States Common Stock be [illegible]ted, subject to final action by Engineers Directors on February 26.
	Department of Stock List approves listing application for Gulf States Common Stock, subject to final action by Engineers Directors on February 26 on a "when distributed" basis and subject to distribution on a fully listed basis and certifies application to the SEC with the request that the SEC grant acceleration in order that the listing of the Gulf States Common Stock "when distributed" may become effective subject to final action by Engineers Directors on February 26.
	Amendments to Forms 1-J, 15-AN and 8-A filed with SEC reporting the issuance of Court order and fixing of record date for warrants by Engineers Directors.
26	Deliver definitive Gulf States Common Stock certificates to Stone & Webster.
	Hold Engineers Directors' Meeting to:
	(a) Consider making the Plan effective by authorizing the mailing of the warrants.
	(b) Authorize Stone & Webster and The Chase to transfer certificates for Gulf States from Engineers to the subscribers.
	Notify New York Stock Exchange and SEC before 2 P. M. that the Plan is effective. N. Y. Stock Exchange needs this notice to declare Engineers Common ex-rights on February 28.
	File application with N. Y. Stock Exchange for listing of Virginia Common Stock; also file Form 8-A with SEC for registration on this Exchange.
	The application should request listing and registration of this stock "upon distribution".

Engineers' Exhibit No. 79 (Cont'd)

Date	
February 1947	
28	Record date for subscription warrants.
	Stone & Webster will send air mail (registered) warrants to Stockholders in the Chicago or San Francisco territory and will send regular mail (registered) the balance of the warrants, (together with with Gulf States prospectus in the case of stockholders becoming such since February 18, 1947).
	Engineers Common Stock would be "ex-rights" on the New York Stock Exchange.
Date	
March 1947	
3	Deliver definitive Gulf States Common Stock Certificates to The Chase.
14	Sell warrants being held for foreign stockholders and lost stockholders over the New York Stock Exchange.
15	El Paso Common Stock and scrip certificates and Virginia Common Stock and scrip certificates to be delivered to Stone & Webster Service Corporation.
17	Subscription period for warrants expires.
18	Hold Engineers Directors' Meeting to:
	(a) Authorize the sale of the balance of Gulf States Common Stock.
	(b) Authorize, subject to receipt of proceeds of such sale, the deposit in trust with The Chase of funds necessary to pay $105 per share to the $5 Preferred Stock and $110 per share to the $5.50 and $6 Preferred Stock, plus accrued dividends to the date of deposit.
	(c) Authorize giving of 5 days' notice to Engineers Preferred Stockholders.
	(d) Authorize Stone & Webster and The Chase to accept Engineers Preferred Stock Certificates and to issue checks.
	Authorize Stone & Webster to:
	(a) Mail letters to Preferred Stockholders advising them of proposed deposit on March 24, 1947 with The Chase and enclose Letter of Transmittal.
	(b) Accept Preferred Stock certificates and beginning March 24, 1947 to issue checks.
	Authorize The Chase to accept Engineers Preferred Stock certificates and to issue checks beginning March 24, 1947.

Engineers' Exhibit No. 79 (Cont'd)

Date	
March	
1947	
	Sell over the New York Stock Exchange the unsubscribed portion of the shares of Gulf States common stock. In the event some other method of disposing is selected, notify the Commission and do not sell if Commission raises any objection.
24	Deposit amount in trust with The Chase National Bank sufficient to pay $105 per share to the $5 Preferred Stock and $110 per share to the $5.50 and $6 Preferred Stock, plus accrued dividends to the date of deposit.
	File certificate of elimination of preferred stock capital in Delaware.
24	File Certificate of Dissolution of Engineers in Delaware, and take other action in connection therewith.
	Hold Engineers Directors' Meeting to:
	(a) Authorize distribution to Engineers Common Stockholders of all of the El Paso Common Stock and 94.4% of the Virginia Common Stock on the basis of 1/5 of a share of El Paso Common Stock and 1.45 shares of Virginia Common Stock for each share of Engineers Common Stock of record on April 3 (Necessary to give New York Stock Exchange 10 days notice of record date).
	(b) Adopt El Paso scrip certificates and Virginia scrip certificates.
	(c) Authorize Stone & Webster Service to issue El Paso and Virginia Common Stock and scrip certificates and to maintain scrip adjustment service.
	(d) Authorize application to the New York Stock Exchange and SEC to delist Engineers Common Stock effective on the record date of the distribution.
	(e) Authorize letter to Common Stockholders.
	Authorize Stone & Webster Service to:
	(a) Mail El Paso and Virginia Common Stock and scrip certificates to Engineers Common Stockholders.
26	New York Stock Exchange approves listing application for Virginia Common Stock subject to distribution and certifies application to the SEC with a request that the SEC grant acceleration in order that the listing of the Virginia Common Stock may become effective immediately after the distribution of such stock to the Engineers Stockholders.

Engineers' Exhibit No. 79 (Cont'd)

Date April 1947	
3	Record date for the determination of Engineers' Common Stockholders entitled to receive El Paso and Virginia Common Stock and scrip certificates. Engineers Common Stock to be delisted from the New York Stock Exchange, Virginia Common Stock to be admitted to the list.
	El Paso Common Stock Certificates and Virginia Common Stock Certificates to be delivered to The Chase.
4	El Paso and Virginia Common Stock and scrip certificates to be mailed on this date.
	Cancel service contracts between Epsco, Inc. and Engineers, Virginia, Gulf States and El Paso.
	Hold Epsco, Inc. Directors' and Stockholders' Meeting to take action in connection with the dissolution of the Company and proceed to wind up affairs of Company.

Engineers' Exhibit No. 79 (Cont'd)

Exhibit D

ENGINEERS PUBLIC SERVICE COMPANY
(INCORPORATED)
90 BROAD STREET
NEW YORK 4

December ....., 1946

To the Stockholders:

On September 10, 1945 we sent you copy of a Plan filed that date with the Securities and Exchange Commission under Section 11(e) of the Public Utility Holding Company Act of 1935 for the divestment of assets by Engineers and related matters. Hearings on the Plan were completed on February 13, 1946 and oral argument was held on September 5, 1946. On December 4, 1946 the Commission issued its Findings and Opinion in which it found that the provisions of the Plan providing for the disposition of Gulf States and El Paso and for the dissolution of Engineers are necessary under the requirements of the Act. The Commission disapproved certain mechanics of the Plan including the proposed bank loan and the proposal to retain all of Engineers holdings of the common stock of Virginia during the period of time required to pay off such bank loan and to determine and discharge any other liabilities but stated that it would be appropriate to reserve a part of the Company's assets for liabilities which may later be found against the Company. The Commission further found that fairness requires that the preferred stockholders be paid an amount equal to their respective call prices on retirement and that it would be appropriate to create an escrow fund in the event of controversy over whether any amount in excess of $100 per share and accrued dividends should be paid to the preferred stockholders, which escrow would include the amount of the premium and provision to compensate the preferred

Engineers' Exhibit No. 79 (Cont'd)

stockholders for the time full payment is withheld from them. The Commission also found that provision should be included in the Plan for supervision by the Commission over payment of fees and expenses incurred in connection with the Plan.

Accordingly the Directors approved on December 13, 1946 the filing of an amended plan which they believe conforms fully with the findings of the Commission. It provides that Engineers will mail warrants to its common stockholders of record on a date to be fixed by the Board of Directors after the court shall have entered a decree or order for the purpose of enforcing the Plan, each of which warrants will evidence the right to acquire from Engineers shares of Gulf States common stock (reclassified) on a basis of one share of Gulf States common stock for each share of Engineers common stock held by such stockholders on such date, either (a) by purchasing from Engineers whole shares of such Gulf States common stock at the rate of $11.50 per share or in the alternative (b) by exchanging with Engineers whole shares of Engineers preferred stock for shares of Gulf States common stock on the basis of equivalent values, assigning $11.50 per share for each share of Gulf States common stock and $105 plus accrued dividends to the expiration date of the warrant for each share of $5 preferred and $110 plus accrued dividends to the expiration date of the warrant for each share of $5.50 preferred and $6 preferred. In order to provide the balance of funds in excess of the proceeds of the warrants and cash in the Treasury of Engineers required to redeem the preferred stock at its respective call prices, payment of special dividends on their common stocks by Virginia, Gulf States and El Paso are contemplated. Such special dividends in the case of Virginia are estimated to be equivalent to one year's dividend paid in advance and in the case of Gulf States to two quarterly dividends paid in advance, and in the case of these two companies it is contemplated that no further common dividends would be

paid until June 15, 1948 in the case of Virginia, and December 15, 1947 in the case of Gulf States so that in the proposed distribution these stocks would be ex-dividend for such respective periods.

The Plan proposes the deposit in trust for the benefit of the preferred stockholders, after five days' prior notice, of an amount equivalent to $105 a share plus accrued dividends to the date of such deposit for each share of $5 preferred and $110 per share plus accrued dividends to the date of such deposit for each share of $5.50 and $6 preferred not surrendered in exchange for Gulf States common stock. Engineers will thereupon file a Certificate of Dissolution. Promptly after the dissolution shall have become effective Engineers will distribute all of the common stock (reclassified) of El Paso pro rata to Engineers common stockholders on the basis of 1/5 of a share of El Paso common stock for each share of Engineers common stock and (2) approximately 94.4% of the common stock of Virginia pro rata to Engineers common stockholders on the basis of 1.45 shares of Virginia common stock for each share of Engineers common stock. Scrip certificates will be issued for fractional shares but such scrip will not be entitled to dividends or voting rights but may be combined in lots aggregating one or more full shares of stock and exchanged for such shares. Engineers will retain 162,612 shares of common stock of Virginia and the balance of cash not required for redemption of the preferred stock and the Directors will thereafter marshal the assets and pay the liabilities of the Company and after such liabilities have been determined and satisfied, including fees and expenses incurred in connection with the Plan to the extent approved by the Commission, will cause the distribution to Engineers common stockholders of the remaining assets of the Company, either in kind or in cash.

Effectuation of the Plan is subject to the following conditions among others, namely, (1) that the necessary Commission and Court approvals be had; (2) that the Board of

Engineers' Exhibit No. 79 (Cont'd)

Directors may withhold mailing of warrants in the event conditions make it inadvisable to proceed with the Plan; (3) that unless waived by Engineers there shall have been obtained from the United States Treasury Department satisfactory assurance as to the tax consequences of the transactions necessary to carry out the Plan.

It is anticipated that the receipt and exercise of the warrants and the receipt of the common stocks of Virginia and El Paso will constitute a non-taxable transaction and that preferred stockholders who exchange their preferred stock for Gulf States common stock in the exercise of warrants will realize no taxable gain thereby. It is planned to list the rights to subscribe to Gulf States common stock for trading on the New York Stock Exchange during the period that the warrants are outstanding and preferred stockholders who desire to acquire rights for this purpose may purchase the same through their bank or broker.

In this connection attention of stockholders is directed to Amendment No. 7 of Federal Reserve Bank Regulation U, which permits a stockholder of a public utility holding company who receives rights to subscribe to securities of an operating utility company owned by such holding company, in connection with simplifying the corporate structure of such holding company, to obtain credit for the purposes of exercising his rights and he may do so by pledging securities, which for this purpose shall have a loan value of 50%.

It is anticipated that if the Plan is approved by the Commission and the Court without undue delay, warrants can be mailed to Engineers common stockholders by approximately March 1, 1947 with a period of sixteen (16) days allowed for exercise of warrants. At the time these warrants are mailed out detailed instructions will be sent in reference to procedure to be followed by the stockholders and it is hoped that a ruling of the Treasury Department may be available at that time in reference to the tax consequences of the Plan.

Engineers' Exhibit No. 79 (Cont'd)

You will note that the Company does not propose to contest the findings of the Securities and Exchange Commission that fairness requires the payment of the voluntary redemption price to the preferred stockholders. We are advised by counsel that the Courts are reluctant to override findings of this character by administrative commissions and that, in their opinion, it is not worth while to contest further this issue.

A copy of the notice issued by the Securities and Exchange Commission on December ....., 1946 relating to the filing of this amendment is enclosed.

Copies of the amended plan summarized above are available for distribution on request.

Yours very truly,

D. C. BARNES,
President.

† Red figure.

(a) During December 1944 and March 1945, all of Virginia Electric and Power Company's investments in transportation properties were sold. Net income from such transportation properties included in the consolidated income statement was not material.

The Company sold its interests in The Western Public Service Company on February 28, 1946. Consequently, the comparative consolidated income statement excludes the operations of such company subsequent to December 31, 1945.

The consolidated income statements are after restatement to reflect the pro rata portion of certain reductions in Federal income taxes occasioned by (1) the losses for tax purposes arising from the sales of transportation properties of a subsidiary in December 1944 and March 1945, and (2) the election of subsidiary companies to terminate the

Engineers' Exhibit No. 79 (Cont'd)

amortizaion period with respect to all emergency facilities, effective September 30, 1945, pursuant to the proclamation issued on September 29, 1945 by the President of the United States.

(b) The provision for Federal income taxes for the 12 months ending October 31, 1946 includes provision for estimated excess profits taxes of $121,874 (prior period—$1,640,859) after giving effect to reductions stated below.

The provision for Federal income taxes for the year 1946 will be reduced $396,918 by reason of deductions for tax purposes of redemption premium and expenses incurred in refunding of bonds. Pro rata portions of this reduction are reflected in the above income statements.

The provision for Federal income taxes for the year 1945 was reduced $9,785,725 (including $1,282,926 representing reduction in tax due to carry-back of unused excess profits credit from 1945 to 1943) of which (1) approximately $2,370,000 was by reason of deductions for tax purposes of redemption premiums and expenses incurred in refunding of bonds; (2) approximately $2,090,000 was by reason of deductions for tax purposes of a loss sustained on the sale of transportation property; and (3) approximately $5,320,000 was by reason of deductions for tax purposes of amounts, in excess of depreciation provided for at usual rates, allowable as amortization of emergency facilities under Section 124 of the Internal Revenue Code. Pro rata portions of these reductions are reflected in the above income statements.

The provision for Federal income taxes for the year 1944 was reduced $11,421,362 (including $956,479 representing reduction in tax due to carry-back of net operating loss deduction and unusued excess profits credit from 1944 to 1942 and 1943), of which approximately $2,090,000 was by reason of deductions for tax purposes of redemption premiums and expenses incurred in refunding of bonds; (2) approximately $6,240,000 was by reason of deductions for tax purposes of a loss sustained on the sale of transportation property; and (3) approximately $3,090,000 was by reason of deductions for tax purposes of amounts, in excess of depreciation provided for at usual rates, allowable as amortization of emergency facilities under Section 124 of the Internal Revenue Code. Pro rata portions of these reductions are reflected in the above income statements.

The subsidiary operating companies elected to terminate the amortization period with respect to all emergency facilities effective September 30, 1945, pursuant to a proclamation issued on September 29, 1945 by the President of the United States. Federal income taxes shown above have been restated to include the reduction resulting from the shortened amortization period. As a result of the deduction for loss on sale of transportation property in 1944, claims for refund of taxes of prior years of approximately $2,600,000 have been filed. Pending review by the Treasury Department of the return for 1944, no effect has been given in the consolidated statements to such refund claims.

(c) See note (b) to consolidated balance sheet.

Engineers' Exhibit No. 79 (Cont'd)

ENGINEERS PUBLIC SERVICE COMPANY (INCORPORATED) AND SUBSIDIARY COMPANIES

Consolidated Balance Sheet Notes

(a) On September 16, 1942 and October 6, 1942 the Securities and Exchange Commission issued further Orders under Section 11(b)(1) of the Public Utility Holding Company Act of 1935, which, with prior Orders, in effect directed the Company to divest itself, within one year, of all of its remaining investments excepting that in Virginia Electric and Power Company, which, if retained, must dispose of its gas and transportation operations. The Company filed a petition with the United States Court of Appeals for the District of Columbia for a review of the September 16, 1942 and October 6, 1942 Orders and on November 22, 1943 the Court set these Orders aside and remanded the case to the Commission for further proceedings in accordance with its opinion. The grounds for the reversal were, in substance, that the Company was entitled to more time to determine whether it desired to retain Virginia Electric and Power Company or Gulf States Utilities Company as its single system and that the interpretation of the Act upon which the Commission directed the divestment of the transportation (since sold) and other incidental businesses was incorrect. Both the Securities and Exchange Commission and the Company applied to the Supreme Court of the United States for writs of certiorari which were granted and the case is still pending. On April 1, 1946, the Court upheld the constitutionality of Section 11(b)(1), one of the issues in the Engineers' case, in a decision relating to The North American Company.

In February 1946 the Company sold its interest in The Western Public Service Company (Delaware).

On September 10, 1945, the Company filed with the Commission a plan, pursuant to Section 11(e) of the Act for divestment of assets and related matters, which plan has subsequently been amended. As amended, Part I of the plan provides that Gulf States Utilities Company will have reclassified its common stock into 1,909,968 shares and El Paso Electric Company will have reclassified its common stock into 381,994 shares; that rights will be issued to the common stockholders of the Company to acquire from the Company for cash or in exchange for whole shares of the Company's preferred stock, shares of Gulf States common stock at $11.50 per share, on the basis of one share of Gulf States common stock for each share of the Company's common stock held; that the proceeds of this sale, together with treasury cash and approximately $3,000,000 of bank borrowings will be used to pay $100 per share, plus accrued dividends, to the holders of the Company's preferred stock not surrendered in exchange as aforesaid; and that the Company will distribute El Paso common stock to the holders of the Company's common stock on the basis of one share for each five shares held as a dividend in partial liquidation; and that the Company will be dissolved within 60 days after Part I of the plan becomes effective but liquidation will be deferred until final settlement of the unfinished business of the Company, including the payment of bank borrowings, at which time the Company's common stockholders would receive a direct interest in the common stock of Virginia Electric and Power Company. Part II of the plan requests the Commission to find that it is fair and equitable to the Company's preferred stockholders to pay them $100 per share, plus accrued dividends, in complete liquidation of their stock but provides, in the event the Commission finds that some additional amount shall be payable, for the automatic amendment of this Part so as to provide for such additional payment to all holders of preferred stock, (including those who surrendered their preferred stock in exchange as aforesaid), reserving to the Company the right to apply for a review of any order providing for or requiring any additional payment. Oral arguments before the Securities and Exchange Commission were held on September 5, 1946.

(b) Provision is being made, pursuant to orders of regulatory commissions, for the amortization of substantially all of plant acquisition adjustments by charges to income over 15-year periods commencing in 1943 and 1944. In accordance with orders of regulatory com-

missions having jurisdiction, the operating companies record the amortization charges as deductions from net operating income but for purposes of these statements such charges have been classified as operating expenses.

(c) See Parent Company note (e).

(d) Represented by 1,909,968 shares of $1 par value. Authorized 1,909,968 shares.

(e) At October 31, 1946, due to covenants made by certain subsidiaries, approximately $13,308,000 of earned surplus is not available for dividends on common stocks of such subsidiaries.

(f) Consolidated earned surplus at October 31, 1945 was increased over that previously reported by $3,247,552, of which $2,027,803 represented the effect of the reduction in Federal income taxes arising from the shortened amortization period for emergency facilities and $1,219,749 arose from the sale of transportation properties in 1944. Reference is made to note (b) to the consolidated income statement.

Engineers' Exhibit No. 79 (Cont'd)

ENGINEERS PUBLIC SERVICE COMPANY
(INCORPORATED)
(Parent Company Only)

Notes to Financial Statements

(a) On February 28, 1946, the Company sold its investment in The Western Public Service Company. Dividends and interest received on this investment have been included in revenue from miscellaneous investments.

(b) The parent company and certain of its subsidiaries join in consolidated Federal income and excess profits tax returns. The provisions shown represent the parent company's pro rata share of the estimated consolidated taxes. Taxes for 1944 were reduced approximately $221,000 and taxes for 1945 were reduced approximately $210,000, due principally to non-recurring deductions of another member of the consolidated group, and have been restated to the Company's aliquot portion of the consolidated taxes due. See note (b) to consolidated income statement.

The parent company does not consider it has any liability for excess profits taxes.

(c) See note (a) to consolidated balance sheet regarding Orders of the Securities and Exchange Commission under Section 11(b)(1) of the Public Utility Holding Company Act of 1935.

(d) Investments in subsidiary companies are carried on the basis of the stated value of securities of the Parent Company issued, and cash paid, therefor, plus contributions to the capital of certain of the subsidiary companies.

(e) Represented by 143,951 shares $5 cumulative dividend preferred of no par value (entitled to $105 per share upon redemption or voluntary liquidation or $100 per share upon involuntary liquidation, plus accrued dividends) and 183,406 shares $5.50 cumulative dividend preferred and 65,098 shares $6 cumulative dividend preferred of no par value (entitled to $110 per share upon redemption or voluntary liquidation or $100 per share upon involuntary liquidation, plus accrued dividends). Total preferred stock authorized 431,000 shares.

(f) Represented by 1,909,968 shares of $1 par value. Authorized 1,909,968 shares.

Engineers' Exhibit No. 79 (Cont'd)

Notes to Financial Statements

(a) The comparative income statement includes for the period through March 31, 1945, operations of Citizens Rapid Transit Corporation, a wholly owned subsidiary. During December 1944 and March 1945, all of the investments in transportation properties, including the capital stock of Citizens Rapid Transit Corporation, were sold. Net income from such transportation properties included in the comparative income statement was not material.

The financial statements are after restatement to reflect the pro rata portion of certain reductions in Federal income taxes occasioned by (1) the losses for tax purposes arising from the sales of transportation properties in December 1944 and March 1945, and (2) the election of the Company to terminate the amortization period with respect to all emergency facilities, effective September 30, 1945, pursuant to the proclamation issued on September 29, 1945 by the President of the United States.

(b) Provision is being made, pursuant to orders of regulatory commissions, for the amortization of substantially all of plant acquisition adjustments by charges to income over 15-year periods commencing in 1943 and 1944. In accordance with orders of regulatory commissions having jurisdiction, the Company records the amortization charges as a deduction from net operating income but for purposes of these statements has classified such charges as operating expenses.

(c) The provision for Federal income taxes for the year 1945 was reduced $7,820,988 (including $1,282,926 representing reduction in tax due to carry-back of unused excess profits credit from 1945 to 1943), of which (1) approximately $2,330,000 was by reason of deductions for tax purposes of redemption premiums and expenses incurred in refunding of bonds; (2) approximately $1,700,000 was by reason of deductions for tax purposes of a loss sustained on the sale of transportation property; and (3) approximately $3,790,000 was by reason of deductions for tax purposes of amounts, in excess of depreciation provided for at usual rates, allowable as amortization of emergency facilities under Section 124 of the Internal Revenue Code. Pro rata portions of these reductions are reflected in the above income statement.

The provision for Federal income taxes for the year 1944 was reduced $9,576,265 (including $956,479 representing reduction in tax due to carry-back of net operating loss deduction and unused excess profits credit from 1944 to 1942 and 1943), of which (1) approximately $2,090,000 was by reason of deductions for tax purposes of redemption premiums and expenses incurred in refunding of bonds; (2) approximately $6,000,000 was by reason of deductions for tax purposes of a loss sustained on the sale of transportation property; and (3) approximately $1,490,000 was by reason of deductions for tax purposes of amounts, in excess of depreciation provided for at usual rates, allowable as amortization of emergency facilities under Section 124 of the Internal Revenue Code. Pro rata portions of these reductions are reflected in the above income statement.

Because of the extraordinary deductions enumerated, the Company does not consider that it has any liability for excess profits taxes for 1945 or 1944.

The Company elected to terminate the amortization period with respect to all emergency facilities effective September 30, 1945 pursuant to a proclamation issued on September 29, 1945 by the President of the United States. Federal income taxes shown above have been restated to include the reduction resulting from the shortened amortization period. As a result of the deduction for loss on sale of transportation property in 1944, claims for refund of taxes of prior years of approximately $2,600,00 have been filed. Pending review by the Treasury Department of the return for 1944, no effect has been given in the statements to such refund claims.

(d) Includes credits resulting from capitalization of interest on funds used for construction purposes:

	1946	1945
October	$1,544.70	$ —0—
12 Months	5,433.96	—0—

Engineers' Exhibit No. 79 (Cont'd)

(e) Represented by 289,471 shares of $100 par value $5 Dividend Preferred Stock, cumulative, entitled to $117.50 per share prior to March 20, 1947 (1950—$115.50; 1953—$113.50; thereafter—$112.50 per share) upon redemption or voluntary liquidation, and to $100 per share upon involuntary liquidation, together with dividends accrued or in arrears in all cases. Total preferred stock authorized 500,000 shares.

(f) Represented by 2,938,445 shares of no par value, including 20 shares reserved for exchange of outstanding scrip. Authorized 4,000,000 shares.

(g) The Company has covenanted that so long as any of the Series E Bonds remain outstanding it will not declare or pay any dividend or make any other distribution to any holder of its common stock (other than a dividend payable in shares of its common stock) except out of net income (as defined in the indenture securing the bonds) accumulated subsequent to September 30, 1944, after deducting the sum of (1) $55,000 per month in respect of such of the first 25 full calendar months after September, 1944 as shall have elapsed, and (2) $75,000 a month in respect of such of the first 116 full calendar months after September, 1944, as shall have elapsed. Similar restriction is imposed by reason of the Company's covenant with respect to outstanding preferred shares. Earned surplus unrestricted as to common dividends amounted to $6,782,792.25 at October 31, 1946.

(h) On September 16, 1942 and October 6, 1942 the Securities and Exchange Commission issued Orders against the Company, Engineers Public Service Company, its parent, and the other subsidiaries of that Company under Section 11(b)(1) of the Public Utility Holding Company Act of 1935. The Orders, among other things, in effect directed Engineers to divest itself, within one year, of all of its investments except that in the Company unless it should elect within a brief period of time to choose Gulf States Utilities Company as its single system. If the Company should be retained as the single system, the Orders required it to dispose of its gas and transportation operations. During December 1944 and March 1945, all the Company's investments in transportation properties were sold.

The Company filed a petition with the United States Court of Appeals for the District of Columbia for a review of the September 16, 1942 and October 6, 1942 Orders and on November 22, 1943 The Court set the Commission's Orders aside and remanded the case to the Commission for further proceedings in accordance with its opinion. The grounds for the reversal were, in substance, that Engineers was entitled to more time to make its choice of its single system and that the interpretation of the Act upon which the Commission directed the divestment of the transportation business (since sold) was incorrect. Both the Securities and Exchange Commission and the Company applied to the Supreme Court of the United States for writs of certiorari which were granted and the case is still pending. On April 1, 1946, the Court upheld the constitutionality of Section 11(b)(1), one of the issues in the Engineers' case, in a decision relating to the North American Company. On September 10, 1945, Engineers filed with the Commission a plan pursuant to Section 11(e) of the Act for divestment of assets and related matters, which plan has subsequently been amended. The first part of the plan provides for the divestment by Engineers of its investments in all subsidiaries except its investment in the Company and the prompt dissolution of Engineers, liquidation of which would be deferred until final settlement of its unfinished business, when the common stockholders of Engineers would obtain a direct interest in the common stock of the Company. Oral arguments before the Securities and Exchange Commission were held on September 5, 1946.

* Decrease.

† Red figure.

(a) See note (b) to balance sheet.

(b) The provision for Federal income taxes for the year 1946 will be reduced $396,918 by reason of deductions for tax purposes of redemption premium and expenses incurred in refunding of bonds. Pro rata portions of this reduction are reflected in the above income statement.

The provision for Federal income taxes for the year 1945 was reduced $1,254,290 (1944—$1,896,542) by reason of deductions for tax purposes of amounts, in excess of depreciation provided for at usual rates, allowable as amortization of emergency facilities under Section 124 of the Internal Revenue Code. Pro rata portions of these reductions are reflected in the above income statement.

The provision for Federal income taxes shown above for 12 months ending October 31, 1946 includes provisions for estimated excess profits taxes of $121,874 (prior period—$1,416,686).

The Company elected to terminate the amortization period with respect to all emergency facilities effective September 30, 1945, pursuant to a proclamation issued on September 29, 1945 by the President of the United States. Federal income taxes shown above have been restated to give effect to the reduction resulting from the shortening amortization period.

Engineers' Exhibit No. 79 (Cont'd)

Comparative Balance Sheet Notes

October 31, 1946

(a) On September 16, 1942 and October 6, 1942 the Securities and Exchange Commission issued Orders against the Company, Engineers Public Service Company, its parent, and the other subsidiaries of that company under Section 11(b)(1) of the Public Utility Holding Company Act of 1935. The Orders, among other things, in effect directed Engineers to divest itself, within one year, of its investment in the Company unless it should elect within a brief period of time to choose the Company as its single system. The Company filed a petition with the United States Court of Appeals for the District of Columbia for a review of the September 16, 1942 and October 6, 1942 Orders and on November 22, 1943 the Court set the Commission's Orders aside and remanded the case to the Commission for further proceedings in accordance with its opinion. The grounds for the reversal were, in substance, that Engineers was entitled to more time to make its choice of its single system and that the interpretation of the Act upon which the Commission directed the divestment of businesses other than electric or gas business was incorrect. Both the Securities and Exchange Commission and the Company applied to the Supreme Court of the United States for writs of certiorari which were granted and the case is still pending. On April 1, 1946, the Court upheld the constitutionality of Section 11(b)(1), one of the issues in the Engineers' case, in a decision relating to the North American Company. On September 10, 1945, Engineers filed with the Commission a plan pursuant to Section 11(e) of the Act for divestment of assets and related matters which, if consummated, would result in the issuance of warrants to the common stockholders of Engineers entitling them to acquire all of the common stock of the Company (reclassified into 1,909,968 shares) at $11.50 per share on the basis of one share of the Company's common stock for each share of common stock of Engineers held. Oral arguments before the Securities and Exchange Commission were held on September 5, 1946.

(b) Provision is being made, pursuant to an order of the Federal Power Commission, for the amortization of substantially all of plant acquisition adjustments by charges to income over a 15-year period commencing in 1943. In accordance with an order of the Federal Power Commission, the Company records the amortization charges as deductions from net operating income but for purposes of these statements such charges have been classified as operating expenses.

(c) Represented by 120,00 shares of $4.40 dividend preferred stock, $100 par value, cumulative, authorized and outstanding, entitled to $111.00 per share prior to October 1, 1949 (1954—$109.50; thereafter—$108.00 per share) upon redemption or voluntary liquidation, and to $100 per share upon involuntary liquidation, together with dividends accrued or in arrears in all cases.

(d) Represented by 280,000 shares of no par value. Authorized 300,000 shares.

(e) The Company has covenanted that, so long as any Bonds of the 1976 Series remain outstanding, it will not declare or pay any dividend or make any other distribution on any shares of its common stock except out of net income (as defined in the indenture securing the bonds) accumulated subsequent to December 31, 1945. Earned surplus unrestricted as to common stock dividends amounted to $2,218,110.05 at October 31, 1946.

H. V. FABER,

Treasurer.

(a) In 1945, the Company became eligible to join with its parent company, Engineers Public Service Company (Incorporated) and others in a consolidated Federal income and excess profits tax return. The provisions shown for the periods subsequent to December 31, 1944 represent the Company's pro rata share of the estimated consolidated income taxes. Taxes for 1945 were reduced approximately $579,000 due principally to nonrecurring deductions of another member of the consolidated group, and have been restated to the Company's aliquot portion of the consolidated tax due.

(b) Includes credits resulting from capitalization of interest on funds for construction purposes:

	1946	1945
October	$ —0—	$247.85
12 months	17,660.36	698.73

(c) On September 16, 1942 and October 6, 1942 the Securities and Exchange Commission issued Orders against the Company, Engineers Public Service Company, its parent, and the other subsidiaries of that company under Section 11(b)(1) of the Public Utility Holding Company Act of 1935. The Orders directed, among other things, Engineers to divest itself, within one year, of its investment in the Company.

The Company filed a petition with the United States Court of Appeals for the District of Columbia for a review of the September 16, 1942 and October 6, 1942 Orders and on November 22, 1943 the Court set these Orders aside and remanded the case to the Commission for further proceedings in accordance with its opinion. The grounds for the reversal were, in substance, that Engineers was entitled to more time to determine whether it desired to retain Virginia Electric and Power Company or Gulf States Utilities Company as its single system and that the interpretation of the Act upon which the Commission directed the divestment of the transportation (since sold) and other incidental businesses was incorrect. Both the Securities and Exchange Commission and the Company applied to the Supreme Court of the United States for writs of certiorari which were granted and the case is still pending. On April 1, 1946, the Court upheld the constitutionality of Section 11(b)(1), one of the issues in the Engineer's case, in a decision relating to the North American Company. (a) Represents deposit with Trustee under First Mortgage of the Company.

(b) Authorized and outstanding 15,000 shares of no par value $4.50 Dividend Preferred Stock, cumulative, entitled to $109 per share upon redemption or voluntary liquidation, and to $100 per share ($1,500,000) upon involuntary liquidation, together with dividends accrued or in arrears in all cases.

(c) Authorized and outstanding 150,000 shares of no par value.

(d) In November 1946, the Company sold $6,000,000 principal amount of First Mortgage Bonds, 2¾% Series due 1976. The proceeds from the above, together with an additional amount from general funds of the Company, are being applied to the redemption of all of the Company's First Mortgage Bonds, Series A 3¼%, due November 1, 1970, at 108.

(e) The Company has covenanted that it will not declare or pay any dividends or make any other distributions to the holders of its common stock (other than a dividend payable in common stock of the Company) except out of net income (as defined in the charter of the Company) accumulated subsequent to December 31, 1939, reduced by the amount of $140,000 per year from 1941 through 1946 and $160,000 in 1947, an aggregate reduction of $1,000,000 ($770,000 to October 31, 1946). Earned surplus unrestricted as to common stock dividends amounted to $1,452,854.80 at October 31, 1946.

SECURITIES AND EXCHANGE COMMISSION

Eighteenth and Locust Streets

Philadelphia 3, Pennsylvania

ENGINEERS PUBLIC SERVICE COMPANY

(Incorporated)

File No. 54-132

Amendment No. 6 to Application Dated September 10, 1945

Engineers Public Service Company (Incorporated) hereby further amends the Plan pursuant to Section 11(e) of the Public Utility Holding Company Act of 1935 for Divestment of Assets and Related Matters of Engineers Public Service Company (Incorporated) by deleting from Section 1 of Division D of the Plan reference to the granting of cumulative voting to the Preferred and Common Stock of Gulf States, so that as amended said Plan shall read as set forth in Exhibit A-3 attached hereto.

If the Commission shall find such Plan, as amended as aforesaid, necessary to effectuate the provisions of Subsection (b) of Section 11 of the Public Utility Holding Company Act and fair and equitable to persons affected thereby and shall make an order approving such Plan, Engineers hereby requests the Commission to apply to an appropriate district court of the United States in accordance with the provisions of Section 11 (e) and Subsection (f) of Section 18 of the Act to enforce and carry out the terms and provisions of said Plan as amended as aforesaid.

Pursuant to the requirements of the Public Utility Holding Company Act of 1935, the Company set forth below

Engineer's Exhibit No. 81 (Cont'd)

caused this instrument to be duly executed on its behalf by its authorized officers on this 30th day of December, 1946.

Engineer's Exhibit No. 81 (Cont'd)

ENGINEERS PUBLIC SERVICE COMPANY

(Incorporated)

Plan Pursuant to Section 11(e) of the

PUBLIC UTILITY HOLDING COMPANY ACT OF 1935 FOR DIVESTMENT OF ASSETS AND RELATED MATTERS

DIVISION A

Purposes of Plan

1. Compliance with orders of the Securities and Exchange Commission ("the Commission") directing the divestment by Engineers Public Service Company (Incorporated) ("Engineers") of its interest in El Paso Electric Company ("El Paso") and Gulf States Utilities Company ("Gulf States").

2. The divestment by Engineers of its interest in Virginia Electric and Power Company ("Virginia").

3. The retirement of the Preferred Stock of Engineers at $110 per share and accrued dividends in the case of the $6 Cumulative Dividend Preferred Stock and the $5.50 Cumulative Dividend Preferred Stock and at $105 per share and accrued dividends in the case of the $5 Dividend Convertible Preferred Stock.

4. The dissolution and liquidation of Engineers.

DIVISION B

Introductory Statement

Engineers, organized and existing under the laws of the State of Delaware, is a registered holding company under the Public Utility Holding Company Act of 1935 ("the Act").

Engineer's Exhibit No. 81 (Cont'd)

Engineers holds the following securities:

150,000 shares of Common Stock without par value of El Paso, being all of the authorized and issued Common Stock of said Company. These shares are to be reclassified into 381,994 shares of Common Stock, without par value, prior to the divestment of El Paso by Engineers.

280,000 shares of Common Stock without par value of Gulf States, being all of the issued Common Stock of said Company, there being 20,000 shares of such Common Stock authorized but unissued. The 280,000 outstanding shares of Common Stock are to be reclassified into 1,909,968 shares of Common Stock, without par value, prior to the divestment of Gulf States by Engineers.

2,932,065 shares of Common Stock without par value of Virginia Electric and Power Company ("Virginia"), there being, in addition, 6,360 shares of such Common Stock in the hands of the public and 20 shares of such Common Stock reserved for scrip and 1,061,555 shares of such Common Stock authorized but unissued.

Engineers has outstanding the following securities:

143,951 shares of $5 Dividend Convertible Preferred Stock ("$5 Preferred") without par value, entitled to receive $100 per share, plus accrued dividends, in involuntary liquidation and $105 per share, plus accrued dividends, on redemption or voluntary liquidation.

183,406 shares of $5.50 Cumulative Dividend Preferred Stock ("$5.50 Preferred") without par value, entitled to receive $100 per share, plus accrued dividends, in involuntary liquidation and $110

Engineer's Exhibit No. 81 (Cont'd)

per share, plus accrued dividends, on redemption or voluntary liquidation.

65,098 shares of $6 Cumulative Dividend Preferred Stock ("$6 Preferred") without par value, entitled to receive $100 per share, plus accrued dividends, in involuntary liquidation and $110 per share, plus accrued dividends, on redemption or voluntary liquidation.

1,909,968 shares of Common Stock of the par value of $1 per share.

Early in 1940 the Commission brought a proceeding against Engineers and its subsidiaries under Section 11(b)(1) of the Act. This Section provides for the restriction of integrated systems and incidental businesses which a holding company may control. On July 23, 1941, the Commission issued an order in that proceeding directing Engineers to dispose of its interest in The Key West Electric Company and Puget Sound Power & Light Company. This order has been fully complied with. On December 29, 1941, the Commission issued a further order under Section 11(b)(1) directing Engineers to dispose of its interest in Missouri Service Company, The Northern Kansas Power Company and The Western Public Service Company. This order also has been fully complied with. On September 16, 1942 and October 6, 1942, the Commission issued further orders under the same Section directing Engineers to dispose of all of its remaining investments except that in Virginia, which, if retained, must dispose of its gas and transportation operations. Engineers has complied with these 1942 orders by disposing of all of the investments ordered divested by those orders except its investments in Gulf States, El Paso and Virginia and with respect to the latter two companies, has partially complied with said orders by the disposal of their transportation properties. Engineers filed a petition with the United States Court of Appeals for the District of Co-

Engineer's Exhibit No. 81 (Cont'd)

lumbia, for a review of the 1942 orders and on November 22, 1943, the Court set these orders aside and remanded the case to the Commission for further proceedings in accordance with its opinion.

The Supreme Court of the United States granted writs of certiorari to both the Commission and Engineers but the case has not yet been decided.

DIVISION C

The Plan

1. Engineers, except as below provided, will mail warrants to its Common Stockholders of record on a date to be fixed by the Board of Directors of Engineers, each of which warrants will evidence the right to acquire from Engineers shares of Gulf States Common Stock (reclassified) on the basis of one share of Gulf States Common Stock for each share of Engineers Common Stock held by such Stockholders on such date either

   (a) by purchasing from Engineers whole shares of such Gulf States Common Stock at the rate of $11.50 per share, or in the alternative,

   (b) by exchanging with Engineers whole shares of Engineers Preferred Stock for shares of Gulf States Common Stock on the basis of equivalent values, assigning $11.50 per share for each share of Gulf States Common Stock and $105 plus accrued dividends to the expiration date of the warrant for each share of $5 Preferred and $110 plus accrued dividends to the expiration date of the warrant for each share of $5.50 Preferred and $6 Preferred; provided that, on the basis of the relative values above stated, the value of the whole shares of Engineers Preferred Stock surrendered in exchange shall not exceed the value of the shares of Gulf States Common Stock which

Engineer's Exhibit No. 81 (Cont'd)

the warrant holder is entitled to and intends to acquire, but, to the extent that the value of such shares of Engineers Preferred Stock surrendered in exchange is less than the value of such shares of Gulf States Common Stock to which the warrant holder is entitled and intends to acquire, the difference shall be paid by the warrant holder to Engineers.

The Board of Directors of Engineers may, however, withhold the mailing of such warrants in the event that, in its opinion, market conditions are such as to render it inadvisable to proceed with the issuance of the warrants. Upon the mailing of such warrants, the Plan shall be deemed effective. In cases where the addresses of such Stockholders are unknown or are outside continental United States and Canada, warrants will not be mailed to Common Stockholders of this Company of record on such date but will be held in the name of Transfer Agent against instructions of the record owners, or their duly authorized agents, until the opening of business on the second business day before the expiration date of the warrant period, at which time all warrants so held with respect to which no such instructions have been received shall, subject to the provisions of paragraph 9 hereof, be sold by the Company and the pro rata share of the aggregate net proceeds, if any, remitted to each Stockholder on whose behalf warrants are so sold, or, in cases where such remittance is not lawful or the address is unknown, held for the account of each such Stockholder subject to payment upon receipt of lawful instructions. In cases where the Engineers' Common Stockholder cannot be located and where no valid claim is made for such net proceeds within a period of ten years from the effective date of the Plan, such net proceeds shall be paid to Gulf States. The warrants must be exercised on or before a specified date

Engineer's Exhibit No. 81 (Cont'd)

(to be approximately sixteen days after the date of mailing warrants). All warrants will be registered in the names of the Common Stockholders, except as above provided, and will be transferable on the books of Engineers. Such warrants will be issued and distributed without the surrender by the Common Stockholders of Engineers of their Common Stock certificates.

2. The Transfer Agent will mail or deliver certificates for Gulf States Common Stock to those persons who exercise the warrants. To the extent warrants are not exercised, Engineers shall sell shares of Gulf States Common Stock represented thereby as promptly thereafter and in such manner as the Board of Directors of Engineers deems to be in the best interests of Engineers, subject to the provisions of paragraph 9 hereof.

3. Engineers will deposit in trust for the benefit of its Preferred Stockholders with a solvent bank or trust company an amount equal to $105 per share plus accrued dividends to the date of such deposit for each share of $5 Preferred and $110 per share plus accrued dividends to the date of such deposit for each share of $5.50 Preferred and $6 Preferred not surrendered in exchange pursuant to (b) of paragraph 1 and will give to all holders of such Preferred Stock five days' prior notice of such deposit at their respective registered addresses, and such notice shall state that upon surrender by the Preferred Stockholders of their certificates for Preferred Stock to the Transfer Agent, they will be paid $105 per share plus such accrued dividends for each share of $5 Preferred and $110 per share plus such accrued dividends for each share of $5.50 Preferred and $6 Preferred; and from and after the date of such deposit, dividends on the Preferred Stock will cease and determine. Such deposit

Engineer's Exhibit No. 81 (Cont'd)

will be in cancellation of the whole of the outstanding Preferred Stock of Engineers. The President or a Vice President and the Secretary or an Assistant Secretary of Engineers shall, without further action by Directors and Stockholders of Engineers, file a certificate or certificates of Engineers reflecting the elimination of the capital represented by the Preferred Stock and the elimination of the authorized Preferred Stock in the Office of the Secretary of State of the State of Delaware and shall record in the office of the Recorder of Deeds of New Castle County, Delaware, a copy or copies thereof certified by the Secretary of State.

4. Immediately after filing the certificate provided for in paragraph 3, the President or a Vice President, and the Secretary or an Assistant Secretary, of Engineers, shall without further action by the directors or stockholders of Engineers:

(1) deposit for filing in the office of the Secretary of State of the State of Delaware, a certificate signed by them and verified by the oath of one of said officers, which shall state that Engineers is dissolved, in which certificate there shall be included a list of names and residences of the directors and officers of Engineers as of the date of such filing;

(2) deposit for recordation in the office of the Recorder of Kent County, Delaware, being the county in which the principal office of Engineers is maintained, a duplicate original of the certificate referred to in (1) above;

(3) cause to be published a copy of such certificate in one issue of a newspaper published in Kent County, Delaware, being the county in which the principal office of Engineers in the State of Delaware is situated; and

Engineer's Exhibit No. 81 (Cont'd)

(4) deposit for filing in the office of the Secretary of State of the State of Delaware an affidavit of the Manager or Publisher of the newspaper referred to in (3) above, that said certificate has been published one time in said newspaper;

and thereupon, when the steps specified in (1), (2), (3) and (4) above shall have been taken, the dissolution of Engineers shall thereby become effective.

5. Promptly after the dissolution of Engineers shall have so become effective Engineers will distribute (1) all of the Common Stock (reclassified) of El Paso pro rata to the Engineers Common Stockholders, on the basis of one-fifth of a share of El Paso Common Stock for each share of Engineers Common Stock and (2) approximately 94.4% of the Common Stock of Virginia pro rata to the Engineers Common Stockholders on the basis of 1.45 shares of Virginia Common Stock for each share of Engineers Common Stock. Such distribution will be without the surrender by the Common Stockholders of Engineers of their Common Stock certificates. No fractional shares of Common Stock of either El Paso or Virginia will be issued or delivered, but in lieu thereof scrip will be issued and delivered. Such scrip will not be entitled to dividends, voting rights or any other stockholders' rights. When combined in lots aggregating one or more full shares of stock, scrip may, up to the date of sale (hereinafter in this paragraph described) of such shares of stock, be exchanged for such shares, together with any dividends which shall have been paid to Stockholders of record on any date subsequent to the effective date of the Plan and prior to the date of such exchange. Engineers will undertake to provide facilities whereby, prior to the date on which the distribution referred to in this paragraph is made, any holder of scrip certificates may dispose of such scrip, or acquire additional

Engineer's Exhibit No. 81 (Cont'd)

scrip so as to enable the holder to exchange such scrip for full shares of stock. All shares of stock reserved for delivery upon the exchange of scrip which shall not have been delivered in connection with such exchange within two years after the effective date of the Plan, shall, promptly after the expiration of such period and subject to the conditions of paragraph 9 hereof, be sold by the Transfer Agent and the Transfer Agent shall, as soon as possible thereafter, distribute to the holders of scrip certificates not theretofore surrendered their proportionate part of the net proceeds of sale, plus their proportionate part of any dividends which shall have been declared to holders of record as of a date after the effective date of the Plan and prior to the date of sale. In cases where the Engineers' Common Stockholders cannot be located and where no valid claim is made for the net proceeds from the sale of stock and the proportionate part of dividends referred to above and within a period of ten years from the effective date of the Plan, such net proceeds and proportionate part of dividends shall be paid, with respect to net proceeds of El Paso stock and dividends, to El Paso, and with respect to net proceeds of Virginia stock and dividends, to Virginia.

In cases where the Engineers' Common Stockholder cannot be located and where no valid claim is made for the whole shares of El Paso and Virginia Common Stocks distributable to such stockholder within a period of ten years from the effective date of the Plan, such shares of stock shall be returned to the issuing Company for cancellation and the claims to dividends payable to holders of record of said shares after the effective date of the Plan shall be cancelled.

6. After the dissolution of Engineers shall have been effective as aforesaid, Engineers shall, nevertheless, be

Engineer's Exhibit No. 81 (Cont'd)

continued as a body corporate for the purposes and for the term specified in Section 42 of the General Corporation Law of the State of Delaware, and Engineers, acting under the direction of its Board of Directors, shall collect its assets and settle its debts and liabilities, with full power, subject to the provisions of paragraph 9 hereof, to sell and dispose of any or all of the assets of Engineers not distributed as aforesaid. Any vacancy occurring in the Board during the continuance of Engineers as a body corporate as aforesaid may be filled by the Board, as provided in its By-laws. After the final settlement of the affairs of Engineers and payment of or provision for its debts and liabilities, the Directors shall cause the distribution to the Engineers Common Stockholders of the remaining assets of the Company either in kind or in cash in exchange for their certificates of Engineers Common Stock. The Directors shall have power to authorize an agent to vote all shares of Virginia Common Stock held by the Company at any time after the making of the distribution referred to in paragraph 5 above at all meetings of stockholders at which such stock is entitled to vote except as to any matter which is being contested by any stockholder.

7. Within 60 days after the dissolution of Engineers shall become effective in accordance with paragraph 4 above, Epsco, Inc., the mutual service corporation, will cancel its service contracts with Engineers, Virginia, Gulf States and El Paso, and Epsco, Inc. will then be dissolved and liquidated.

8. Engineers will pay all fees and expenses by whomsoever incurred in connection with the Plan or the proceedings in respect thereto, to the extent approved by the Commission.

9. Sales by Engineers of warrants in cases where the addresses of stockholders are unknown or are outside

Engineer's Exhibit No. 81 (Cont'd)

the Continental United States or Canada provided to be made under the provisions of paragraph 1 above, by Engineers of shares of Gulf States Common Stock represented by warrants not exercised provided to be made under the provisions of paragraph 2 above, by Engineers of any assets not distributed provided to be made under the provisions of paragraph 6 above, and by the Transfer Agent of shares of stock of Virginia and El Paso, represented by scrip, which shall not have been delivered in connection with the rights of combination of such scrip provided to be made under the provisions of paragraph 5 above, shall all be made subject to the following provisions: Engineers or the Transfer Agent, as the case may be, may sell such warrants or shares of stock on the New York Stock Exchange without further action by the Commission, but neither the Company nor the Transfer Agent shall sell any such warrants or shares in any other manner unless the Company or the Transfer Agent, as the case may be, shall by telephone or telegraph have given to the Commission at least 24 hours prior notice of its intention so to do and of the details in respect thereof. Upon the expiration of such 24 hour period the Company or the Transfer Agent, as the case may be, may proceed with such sale in the manner specified in such notice unless during such period the Company or the Transfer Agent, as the case may be, shall have been informed by the Commission that the Commission intends to issue an order to show cause why the sale should be consummated, in which event such sale shall not be consummated without the approval of the Commission.

Engineers believes and alleges that the approval of this Plan is necessary for compliance with the orders issued by the Commission on September 16, 1942 and October 6, 1942 under Section 11 of the Act and to effectuate the provisions of subsection (b) of Section

Engineer's Exhibit No. 81 (Cont'd)

11 of the Act, and if the Commission shall find the Plan necessary to effectuate the provisions of subsection (b) of Section 11 of the Act and fair and equitable to the persons affected thereby, Engineers prays that the Commission shall enter an order approving the Plan containing a recitation that the relevant transactions of the Plan are necessary or appropriate to the integration or simplification of the holding company system of which Engineers is a member and necessary or appropriate to effectuate the provisions of subsection (b) of Section 11 of the Act, all in accordance with the meaning and requirements of the Internal Revenue Code, as amended, including Sections 371 and 1808(f) and Supplement R thereof.

DIVISION D

Conditions to Effectuation of the Plan

The effectuation of the Plan is dependent upon the satisfaction of the following conditions:

1. Gulf States shall have reclassified its Common Stock into 1,909,968 shares of Common Stock, without par value; Gulf States shall have given to its Preferred Stock seven votes per share instead of the one vote per share it now carries; El Paso shall have reclassified its Common Stock into 381,994 shares of Common Stock, without par value; the charters of Virginia and El Paso shall have been amended to provide for cumulative voting in respect of the Common Stock for the election of Directors; and the charters of Virginia, Gulf States and El Paso shall have been amended to provide for pre-emptive rights to Common Stockholders to subscribe for additional Common Stock issued for cash except in the case of public offerings.

2. The Commission shall have issued the order prayed for.

Engineer's Exhibit No. 8 (Cont'd)

3. The Commission shall have instituted a proceeding in a court of competent jurisdiction pursuant to Section 11(e) of the Act and such court shall have entered a decree or order for the purpose of enforcing the Plan.

4. There shall have been obtained from the United States Treasury Department (unless Engineers, in its discretion, shall waive this condition) a closing agreement or ruling or closing agreements or rulings as to the tax consequences of the transactions necessary to carry out the Plan and such agreements or rulings shall be satisfactory to counsel for Engineers.

5. Any corporate action in connection with the Plan, which may be deemed necessary by counsel for Engineers shall have been carried out in a manner satisfactory to such counsel.

6. Authorization satisfactory to counsel for Engineers shall have been given for the carrying out of the Plan and for the issuance for all securities provided to be issued pursuant to the Plan, by all regulatory commissions, the consent of which is legally necessary.

7. The warrants referred to in paragraph 1 of the Plan shall have been mailed to Engineers Common Stockholders within the exceptions therein provided.

DIVISION E

Amendments to the Plan and Other Provisions

Until approved by the Commission, the Plan may be modified or amended in any respect or particular by Engineers. After being approved by the Commission and before being approved by a court, the Plan or any part thereof may be modified or amended in any respect or particular by Engineers with the approval of the Commission. After the approval by the Court and before the Plan has been consummated, pursuant to the order or decree of a court of

Engineer's Exhibit No. 81 (Cont'd)

competent jurisdiction, the Plan may be modified or amended in any respect or particular by Engineers with the approval of both the Commission and the Court. No amendments to the Plan shall be made without the consent or agreement of Engineers.

Engineers may employ such agents, attorneys or others as it may deem desirable for the purpose of carrying out the Plan. Engineers may from time to time delegate to others any power or discretion conferred upon it by the Plan.

The statements, opinions and conclusions contained in the Plan are intended solely for the purpose of assisting the Commission, any court and the Stockholders in any steps or proceedings with respect to the Plan and are not intended for use or information by prospective purchasers of any securities whether now existing or proposed to be issued or for any purposes other than the purposes set forth in this paragraph; and no one is authorized to make any statements regarding the Plan, whether with reference to any securities referred to herein or otherwise which are not set forth herein.

By Order of the Board of Directors

Engineers Public Service Company
(Incorporated)

By D. C. Barnes,
D. C. Barnes,
President.

Engineers' Exhibit No. 82.

Affidavit of Richard N. Benjamin as to mailing of Letter and Notice.

STATE OF NEW YORK }
COUNTY OF NEW YORK } ss.:

I, Richard N. Benjamin, being first duly sworn, do affirm and say that I am Secretary of Engineers Public Service Company (Incorporated), a company created and existing under the laws of the State of Delaware; that I caused to be mailed on December 20 and December 21, 1946 to each holder of Preferred Stock and Common Stock of Engineers Public Service Company (Incorporated) of record at his or her registered address then appearing on the stock books of the Company

(1) A copy of the attached letter of D. C. Barnes, President of the Company, dated December 20, 1946, and

(2) A copy of the attached notice of filing of amendment and Order for argument and hearing on Plan, as amended, pursuant to Section 11(e) of the Public Utility Holding Company Act of 1935 and Order for reopening record of the securities and Exchange Commission, dated December 19, 1946

I do further certify and affirm that I caused to be mailed copies of the documents listed in (1) and (2) of the preceding sentence to all persons becoming stockholders of Engineers Public Service Company (Incorporated) through the close of business December 27, 1946.

WITNESS my hand and the seal of said Company this 2nd day of January, 1947.

RICHARD N. BENJAMIN

Engineers' Exhibit No. 82 (Cont'd)

ENGINEERS PUBLIC SERVICE COMPANY
(Incorporated)
90 Broad Street
New York 4

December 20, 1946

To the Stockholders:

On September 10, 1945 we sent you copy of a Plan filed that date with the Securities and Exchange Commission under Section 11(e) of the Public Utility Holding Company Act of 1935 for the divestment of assets by Engineers and related matters. Hearings on the Plan were completed on February 13, 1946 and oral argument was held on September 5, 1946. On December 4, 1946 the Commission issued its Findings and Opinion in which it found that the provisions of the Plan providing for the disposition of Gulf States and El Paso and for the dissolution of Engineers are necessary under the requirements of the Act. The Commission disapproved certain mechanics of the Plan including the proposed bank loan and the proposal to retain all of Engineers holdings of the common stock of Virginia during the period of time required to pay off such bank loan and to determine and discharge any other liabilities but stated that it would be appropriate to reserve a part of the Company's assets for liabilities which may later be found against the Company. The Commission further found that fairness requires that the preferred stockholders be paid an amount equal to their respective call prices on retirement and that it would be appropriate to create an escrow fund in the event of controversy over whether any amount in excess of $100 per share and accrued dividends should be paid to the preferred stockholders, which escrow would include the amount of the premium and provision to compensate the preferred stockholders for the time full payment is withheld from them. The Commission also found that provision should be included in the Plan for supervision by the Commission over

payment of fees and expenses incurred in connection with the Plan.

Accordingly the Directors approved on December 13, 1946 the filing of an amended plan which they believe conforms fully with the findings of the Commission. It provides that Engineers will mail warrants to its common stockholders of record on a date to be fixed by the Board of Directors after the court shall have entered a decree or order for the purpose of enforcing the Plan, each of which warrants will evidence the right to acquire from Engineers shares of Gulf States common stock (reclassified) on a basis of one share of Gulf States common stock for each share of Engineers common stock held by such stockholders on such date, either (a) by purchasing from Engineers whole shares of such Gulf States common stock at the rate of $11.50 per share or in the alternative (b) by exchanging with Engineers whole shares of Engineers preferred stock for shares of Gulf States common stock on the basis of equivalent values, assigning $11.50 per share for each share of Gulf States common stock and $105 plus accrued dividends to the expiration date of the warrant for each share of $5 preferred and $110 plus accrued dividends to the expiration date of the warrant for each share of $5.50 preferred and $6 preferred. In order to provide the balance of funds in excess of the proceeds of the warrants and cash in the Treasury of Engineers required to redeem the preferred stock at its respective call prices, payment of special dividends on their common stocks by Virginia, Gulf States and El Paso are contemplated. Such special dividends in the case of Virginia are estimated to be equivalent to one year's dividend paid in advance and in the case of Gulf States to two quarterly dividends paid in advance, and in the case of these two companies it is contemplated that no further common dividends would be paid until June 15, 1948 in the case of Virginia, and December 15, 1947 in the case of Gulf States so that in the proposed distribution these stocks would be ex-dividend for such respective periods.

Engineers' Exhibit No. 82 (Cont'd)

The Plan proposes the deposit in trust for the benefit of the preferred stockholders, after five days' prior notice, of an amount equivalent to $105 a share plus accrued dividends to the date of such deposit for each share of $5 preferred and $110 per share plus accrued dividends to the date of such deposit for each share of $5.50 and $6 preferred not surrendered in exchange for Gulf States common stock. Engineers will thereupon file a Certificate of Dissolution. Promptly after the dissolution shall have become effective Engineers will distribute all of the common stock (reclassified) of El Paso pro rata to Engineers common stockholders on the basis of ⅕ of a share of El Paso common stock for each share of Engineers common stock and (2) approximately 94.4% of the common stock of Virginia pro rata to Engineers common stockholders on the basis of 1.45 shares of Virginia common stock for each share of Engineers common stock. Scrip certificates will be issued for fractional shares but such scrip will not be entitled to dividends or voting rights but may be combined in lots aggregating one or more full shares of stock and exchanged for such shares. Engineers will retain 162,612 shares of common stock of Virginia and the balance of cash not required for redemption of the preferred stock and the Directors will thereafter marshal the assets and pay the liabilities of the Company and after such liabilities have been determined and satisfied, including fees and expenses incurred in connection with the Plan to the extent approved by the Commission, will cause the distribution to Engineers common stockholders of the remaining assets of the Company, either in kind or in cash.

Effectuation of the Plan is subject to the following conditions among others, namely, (1) that the necessary Commissions and Court approvals be had; (2) that the Board of Directors may withhold mailing of warrants in the event market conditions make it inadvisable to proceed with the Plan; (3) that unless waived by Engineers there shall have

Engineers' Exhibit No. 82 (Cont'd)

been obtained from the United States Treasury Department satisfactory assurance as to the tax consequences of the transactions necessary to carry out the Plan.

It is anticipated that the receipt and exercise of the warrants and the receipt of the common stocks of Virginia and El Paso will constitute a non-taxable transaction and that preferred stockholders who exchange their preferred stock for Gulf States common stock in the exercise of warrants will realize no taxable gain thereby. It is planned to list the rights to subscribe to Gulf States common stock for trading on the New York Stock Exchange during the period that the warrants are outstanding and preferred stockholders who desire to acquire rights for this purpose may purchase the same through their bank or broker.

In this connection attention of stockholders is directed to Amendment No. 7 of Federal Reserve Bank Regulation U, which permits a stockholder of a public utility holding company who receives rights to subscribe to securities of an operating utility company owned by such holding company, in connection with simplifying the corporate structure of such holding company, to obtain credit for the purposes of exercising his rights and he may do so by pledging securities, which for this purpose shall have a loan value of 50%.

It is anticipated that if the Plan is approved by the Commission and the Court without undue delay, warrants can be mailed to Engineers common stockholders by approximately March 1, 1947 with a period of sixteen (16) days allowed for exercise of warrants. At the time these warrants are mailed out financial data regarding Gulf States and detailed instructions in reference to procedure to be followed by the stockholders will be sent. It is hoped that a ruling of the Treasury Department may be available at that time in reference to the tax consequences of the Plan.

You will note that the Company does not propose to contest the findings of the Securities and Exchange Commission that fairness requires the payment of the voluntary redemption price to the preferred stockholders. We are

Engineers' Exhibit No. 82 (Cont'd)

advised by counsel that the Courts are reluctant to override findings of this character by administrative commissions and that, in their opinion, it is not worth while to contest further this issue.

A copy of the notice issued by the Securities and Exchange Commission on December 19, 1946 relating to the filing of this amendment is enclosed.

Copies of the amended plan summarized above are available for distribution on request.

Yours very truly,

D. C. BARNES,
President.

Engineers' Exhibit No. 82 (Cont'd)

UNITED STATES OF AMERICA

BEFORE THE

SECURITIES AND EXCHANGE COMMISSION

At a regular session of the Securities and Exchange Commission, held at its office in the City of Philadelphia, Pa., on the 19th day of December, A. D., 1946.

IN THE MATTER *of* ENGINEERS PUBLIC SERVICE COMPANY File No. 54-132 EL PASO ELECTRIC COMPANY File No. 70-1149 GULF STATES UTILITIES COMPANY File No. 70-1150 VIRGINIA ELECTRIC AND POWER COMPANY File No. 70-1419 (Public Utility Holding Company Act of 1935)	Notice of Filing of Amendment and Order For Argument and Hearing on Plan, as Amended, Pursuant To Section 11(e) of The Public Utility Holding Company Act of 1935, and Order Reopening Record.

Engineers having filed on September 10, 1945 an application for approval of a plan pursuant to Section 11(e) of the Act for the divestment of its interests in El Paso and Gulf States; and El Paso and Gulf States, for the purpose of facilitating the effectuation of such plan, having filed declarations pursuant to Section 7 of said Act regarding the reclassification of their respective shares of common stock; and

Engineers' Exhibit No. 82 (Cont'd)

The Commission, in its Notice of Filing and Order for Hearing issued October 15, ~~1945~~ (Holding Company Act Release No. 6131) having summarized therein the terms of such plan and declarations (which matters were consolidated) and ordered a hearing thereon; and having required Engineers to give notice of such hearing to all its stockholders of record by mailing a communication giving the date, hour and place of hearing to each of its stockholders at their last known address and also advising its stockholders that Engineers would, if requested, furnish copies of said Notice of Filing and Order for Hearing; and hearings having been held, extensive testimony having been taken and numerous exhibits having been introduced, the record having been closed, and briefs having been submitted and the Commission having heard oral argument; and

The Commission having on December 4, 1946 issued its Findings and Opinion (Holding Company Act Release No. 7041) stating that if within a period of thirty days from the date of said Opinion the plan were amended in accordance with the views expressed therein, an appropriate order approving said plan, as so amended, would be entered and the Commission would apply to an appropriate District Court for approval and enforcement of the plan; and

Engineers having filed an amendment to the plan on December 17, 1946, in which it is stated that the plan has been amended in accordance with the Commission's views expressed in its Findings and Opinion issued December 4, 1946; and El Paso and Gulf States, for the purpose of facilitating the effectuation of such plan, as amended, having filed amendments to their declarations pursuant to Section 7 of the Act; and Virginia, for the purpose of facilitating the effectuation of such plan, as amended, having filed a declaration pursuant to Section 7 of the Act, all as more particularly described hereafter;

All interested persons are referred to said documents which are on file in the offices of the Commission for a full

Engineers' Exhibit No. 82 (Cont'd)

statement of the transactions therein proposed, which are summarized as follows:

1. Engineers will mail warrants to its common stockholders, which warrants will be transferable on the books of the company and will evidence the right to acquire shares of Gulf States common stock from Engineers, on the basis of one share of Gulf States common stock (reclassified into 1,909,968 shares of common stock, which is the same number of shares as the outstanding Engineers common stock) for each share of Engineers common stock, either by purchasing from Engineers whole shares of Gulf States common stock at the rate of $11.50 per share, or in the alternative, by exchanging whole shares of Engineers preferred stock for shares of Gulf States common stock on the basis of equivalent amounts, assigning $11.50 per share for each share of Gulf States common stock and $105 plus accrued dividends to the expiration date of the warrants for each share of $5 preferred stock and $110 plus accrued dividends to the expiration date of the warrants for each share of $5.50 and $6 preferred stock. However, it is provided in the amended plan, that the Board of Directors of Engineers may withhold the mailing of such warrants in the event that, in its opinion, market conditions are such as to render it inadvisable to proceed with the issuance of the warrants. The warrants are to be exercised on or before a specified date to be approximately sixteen days after the date of mailing the warrants. Such warrants will be issued and distributed without the surrender by the common stockholders of Engineers of their common stock. In cases where the addresses of Engineers' common stockholders are unknown or outside continental United States and Canada, warrants will not be mailed to such stockholders but will be held by a transfer agent against instructions of the record owners until the opening of business on the second business day before the expiration date of the warrant period, at which time all warrants so held with respect to which no instruc-

Engineers' Exhibit No. 82 (Cont'd)

tions are received, shall, subject to the provisions of paragraph 8 below, be sold by the company and the pro rata share, if any, remitted to each stockholder, or in cases where such remittance is unlawful or the address unknown, held for the account of each such stockholder. In cases where the Engineers' common stockholder cannot be located within a period of 10 years from the effective date of the amended plan, such net proceeds shall be paid to Gulf States. It is stated in the amended plan that upon the mailing of such warrants the amended plan shall be deemed effective.

2. To the extenf that the warrants are not exercised, Engineers proposes to sell shares of Gulf States common stock represented thereby as promptly thereafter and in such manner as the Board of Directors of Engineers deems to be in the best interests of the company, subject to the provisions of paragraph 8 below.

3. Engineers will deposit in trust for the benefit of its preferred stockholders an amount equal to $105 per share plus accrued dividends to the date of deposit for each share of $5 preferred stock and $110 per share plus accrued dividends to the date of deposit for each share of $5.50 preferred and $6 preferred not surrendered in exchange pursuant to paragraph 1 above, and will give to all holders of such preferred stock five days prior notice of such deposit. From and after the date of such deposit, dividends on all three series of preferred stock will cease. It is stated that such deposit will be in cancellation of the whole of the outstanding preferred stock of Engineers.

4. Immediately after the filing of a certificate reflecting the elimination of the capital represented by the perferred stock of Engineers in the Office of the Secretary of State of the State of Delaware, Engineers is to be legally dissolved as a corporate entity.

5. Promptly after the dissolution of Engineers becomes effective, Engineers will distribute the common stock of El

Engineers' Exhibit No. 82 (Cont'd)

Paso pro rata to the Engineers common stockholders on the basis of ⅕ of a share of El Paso common stock (reclassified into 381,994 shares of common stock) for each share of Engineers common stock and also distribute approximately 94.4% of the Virginia common stock to the Engineers common stockholders on the basis of 1.45 shares of Virginia common stock for each share of Engineers common stock. Such distribution will be without the surrender by the common stockholders of Engineers of their common stock certificates. No fractional shares of common stock of either El Paso or Virginia will be issued or delivered, but in lieu thereof scrip will be issued and delivered. Such scrip will not be entitled to dividends, voting rights or any other stockholders' rights. When combined in lots aggregating one or more full shares of stock, scrip may, up to the date of sale of such shares of stock, be exchanged for such shares, together with any dividends which shall have been paid to stockholders of record on any date subsequent to the effective date of the amended plan and prior to the date of exchange. Engineers proposes to undertake to provide facilities whereby any holder of scrip certificates may dispose of such scrip, or acquire additional scrip so as to enable the holder to exchange such scrip for full shares of stock. All shares of stock reserved for issuance and delivery upon the exchange of scrip which shall not have been issued or delivered in connection with such exchange within two years after the effective date of the amended plan, shall, promptly after the expiration of such period and subject to the conditions of paragraph 8 below, be sold by the transfer agent and the transfer agent shall, as soon as possible thereafter, distribute to the holders of scrip certificates not theretofore surrendered their proportionate part of the proceeds of sale, plus their proportionate part of any dividends which shall have been declared to holders of record after the effective date of the amended plan and prior to the date of sale. If within a period of 10 years from the effective

Engineers' Exhibit No. 82 (Cont'd)

date of the amended plan, common stockholders of Engineers cannot be located, the proportionate part of the net proceeds and dividends attributable thereto shall be paid with respect to net proceeds of El Paso stock and dividends, to El Paso, and with respect to net proceeds of Virginia stock and dividends, to Virginia. Furthermore, it is also provided that if within a period of 10 years from the effective date of the amended plan certain Engineers common stockholders cannot be located, the whole shares of El Paso and Virginia common stocks not so claimed shall be returned to the respective issuing company for cancellation and the claims of dividends payable to holders of record of said shares after the effective date of the plan shall be cancelled.

6. It is further provided that after Engineers shall have become dissolved, Engineers is to be continued as a body corporate for the purposes and for the term specified in Section 42 of the General Corporation Law of the State of Delaware, and Engineers, acting under the direction of its Board of Directors, is to collect its assets and settle its debts and liabilities, with full power to sell and dispose of any or all of the assets of Engineers not distributed as aforesaid. After the final settlement of the affairs of Engineers and payment of or provision for its debts and liabilities, the Directors shall cause the distribution to the Engineers common stockholders of the remaining assets of the company either in kind or in cash in exchange for their certificates of Engineers common stock. It is further provided that the directors shall have power to authorize an agent to vote all shares of Virginia common stock held by the company at all meetings of stockholders at which such stock is entitled to vote except as to any matter which is being contested by any stockholder.

7. Within 60 days after the dissolution of Engineers shall have become effective, Epsco, Inc., the mutual service company, will cancel its service contracts with Engineers,

Engineers' Exhibit No. 82 (Cont'd)

Virginia, Gulf States and El Paso and thereupon be dissolved and liquidated.

8. Sales by Engineers of warrants in cases where the addresses of stockholders are unknown or are outside the continental United States or Canada provided to be made under the provisions of paragraph 1 above; by Engineers of shares of Gulf States' common stock represented by warrants not exercised provided to be made under the provisions of paragraph 2 above; by the transfer agent of shares of stock of El Paso and Virginia represented by scrip which shall not have been delivered in connection with the rights of combination of such scrip provided to be made under the provisions of paragraph 5; and by Engineers of any assets not distributed provided to be made under the provisions of paragraph 6 above, shall all be made subject to the following provisions: Engineers or the transfer agent may sell such warrants or shares of stock on the New York Stock Exchange without further action by the Commission, but neither Engineers nor the transfer agent shall sell any such warrants or shares of stock in any other manner unless the company, or the transfer agent, as the case may be, shall by telephone or telegram have given to the Commission at least 24 hours prior notice of its intentions so to do and of all the details in respect thereof, and upon the expiration of such 24-hour period, Engineers or the transfer agent may proceed with such sale in the manner specified in said notice unless during said period Engineers or the transfer agent shall have been informed by the Commission that the Commission intends to issue an order to show cause why the sale should be consummated, in which event such sale shall not be consummated without the approval of the Commission.

The following conditions, among others, are expressly established for the effectuation of the amended plan:

a. Reclassification of the common stocks of Gulf States and El Paso.

Engineers' Exhibit No. 82 (Cont'd)

b. Approval by the Commission of the amended plan.

c. Obtaining from the United States Treasury Department, unless Engineers waives this condition, a closing agreement or ruling as to tax consequences of the transactions necessary to carry out the amended plan, which agreement or ruling shall be satisfactory to counsel for Engineers.

d. The issuance of the Gulf States warrants.

It is also proposed that, in order to provide additional funds in excess of the proceeds from the sale of the Gulf States warrants and cash in Engineers' treasury to retire the Engineers preferred stock at their respective call prices, payment of special dividends on the common stocks of Virginia, Gulf States and El Paso are to be made as follows: in the case of Virginia, $2,932,000, with no further common stock dividends to be paid until June 15, 1948; in the case of Gulf States, $756,000, with no further common stock dividends to be paid until December 15, 1947; and in the case of El Paso, $105,000.

Engineers states that the approval of the amended plan is necessary for compliance with the orders issued by the Commission on September 16, 1942, and October 6, 1942, under Section 11 of the Act and to effectuate the provisions of Section 11(b) of the Act, and if the Commission shall find the plan necessary to effectuate the provisions of Section 11(b) of the Act and fair and equitable to the persons affected thereby, the Commission should issue an order approving such amended plan. Engineers also requests that the Commission's order approving the amended plan contain the recitation that the relevant transactions contained therein are necessary or appropriate to the integration or simplification of the holding company system of which Engineers is a member and necessary or appropriate to effectu-

Engineers' Exhibit No. 82 (Cont'd)

ate the provisions of subsection (b) of Section 11 of the Act, or in accordance with the meaning and requirements of the Internal Revenue Code, as amended, including Sections 371 and 1808(f) and Supplement R thereof. The amended plan provides for the payment by Engineers of all fees and expenses by whomsoever incurred in connection with said amended plan or the proceedings with respect thereto to the extent approved by the Commission.

In connection with the amended plan, Virginia has filed a declaration and El Paso and Gulf States have filed amended declarations pursuant to Section 7 of the Act proposing, among other things, that the respective charters of Virginia, El Paso and Gulf States will be amended to provide for cumulative voting for the election of the respective boards of directors for each company and for preemptive rights to the holders of common stock in respect to common stock of each company issued for cash, except in respect to any such stock issued in connection with a public offering.

The Commission being required by the provisions of Section 11(e) of said Act, before approving the plan, as amended, to find that such plan is necessary to effectuate the provisions of Section 11(b) and is fair and equitable to the persons affected thereby; and

It appearing to the Commission that the proceedings heretofore instituted with respect to the plan filed by Engineers (File No. 54-132) and the declarations filed by El Paso (File No. 70-1149) and Gulf States (File No. 70-1150) are related to and involve common questions of law and fact with the declaration filed by Virginia (File No. 70-1419) and therefore should be consolidated; and

The Commission deeming it appropriate to afford interested persons an opportunity for hearing and argument on the plan and declarations, as amended, and deeming it appropriate that any such hearing and argument should be held before the Commission and should be directed to

Engineers' Exhibit No. 82 (Cont'd)

whether the plan, as amended, conforms to the standards of Section 11(e) and whether the declarations, as amended, satisfy the requirements of Section 7;

IT IS HEREBY ORDERED that the declaration filed by Virginia be, and hereby is consolidated with these proceedings.

IT IS FURTHER ORDERED that any person desiring to present argument or to be heard on such plan, as amended, shall appear before the Commission at 10:30 A. M., E. S. T., on the 3rd day of January, 1947, at the offices of the Securities and Exchange Commission, 18th and Locust Streets, Philadelphia, Pennsylvania, in such room as may be designated at that time by the Hearing Room Clerk in Room 318; at which time the record herein will be reopened and the hearing herein will be reconvened. Any person desiring to present argument or to be heard shall, on or before the 2nd day of January, 1947, file a written request or application with the Secretary of the Commission in accordance with the provisions of Rule XVII of the Commission's Rules of Practice. Such request shall set forth the nature of such person's interest in the proceedings and the reasons for requesting to present argument or to be heard.

IT IS FURTHER ORDERED that notice of this argument and hearing be given to Engineers, El Paso, Gulf States and Virginia, and all other participants in the proceeding, by mailing to them copies of this order by registered mail, and to all other persons by general release of this Commission which shall be distributed to the press and mailed to the mailing list for releases issued under the Holding Company Act of 1935, and by publication in the Federal Register.

IT IS FURTHER ORDERED that Engineers give notice of this argument and hearing to all its stockholders of record by mailing a copy of this Notice and Order at least 10 days prior to the date of this argument and hearing.

Engineers' Exhibit No. 89.

IT IS FURTHER ORDERED that jurisdiction be and is hereby reserved to separate, in whole or in part, any of the issues, questions or matters in these proceedings or which may arise in these proceedings, or to consolidate with these proceedings other filings or matters pertaining to said consolidated proceedings or to take such other action as may appear conducive to an orderly, prompt and economical disposition of the matters involved.

By the Commission.

ORVAL L. DUBOIS,
Secretary.

Engineers' Exhibit No. 89.

Opinion of William E. Tucker and T. Justin Moore addressed to the Board of Directors of Engineers Public Service Company dated December 12, 1946.

MUDGE, STERN, WILLIAMS & TUCKER
20 Pine Street
New York 5, N. Y.

TO THE BOARD OF DIRECTORS OF

ENGINEERS PUBLIC SERVICE COMPANY
(Incorporated):

Dear Sirs:

On December 4, 1946, the SEC filed its opinion in the Engineers Section 11(e) Plan case. Mr. Barnes has requested us to review that opinion and to advise you whether or not in view thereof it is worth while further to contest the payment to the preferred stockholders under the Plan of more than $100 per share, plus accrued dividends, which is the involuntary liquidation payment provided for in the certificate of incorporation of the Company.

Engineers' Exhibit No. 89 (Cont'd)

The section of the Act under which the Plan was filed, as you know, requires that the Plan in order to be approved shall be found by the Commission to be fair and equitable to the persons affected thereby. The Plan requested the Commission to find it fair and equitable to pay to the preferred stockholders only $100 per share, plus accrued dividends. That provision, among other, is found by the Commission to be unfair and as a condition to Commission approval of the Plan, the opinion requires, among other amendments, an amendment which will provide for the payment to the preferred stockholders, in addition to $100 per share and accrued dividends, of amounts equivalent to premiums payable in respect of each of the three series outstanding in the case of redemption thereof, namely, $5 in respect of the $5 dividend stock and $10 in respect of the $5.50 dividend and $6 dividend stocks.

At the outset we think we should briefly review the reasoning by which the Commission reached that conclusion. The opinion considers under separate headings "Fairness to the Preferred Stockholders" and "Fairness to the Common Stockholders".

Fairness to the Preferred Stockholders

Under this heading the Commission recognizes in substance the claim which Engineers made that the liquidation of Engineers proposed under the Plan is involuntary and in effect forced by the Act.

Notwithstanding, the Commission refused to conclude that that means that the involuntary liquidation preference should be applied, because, they say, the Supreme Court in the Otis case (323 U. S. 624) pointed out that "Congress did not intend that its exercise of power to simplify should mature rights created without regard to the possibility of simplification of system structures which otherwise would

Engineers' Exhibit No. 89 (Cont'd)

arise only by voluntary action of the stockholders, or involuntarily, through action of the creditors".

Then on the basis of earnings and assets, comparable yields and expert testimony in the record, the Commission finds that the preferred stock has an investment value "at least equal to the respective call prices" of the three series; and concludes "on full consideration of the record" that the payment of only $100 per share plus accrued dividends would not be fair and equitable to the preferred stockholders and that the fair and equitable standard requires that each of the series be paid its redemption price plus accrued dividends.

Fairness to the Common Stockholders

Under this heading, the opinion points out that the Plan, if amended so as to require the payment to the preferred stockholders of the respective call prices plus accrued dividends (and otherwise amended as required by the opinion) will also be fair to the common stockholders.

Engineers claimed that in view of the losses which the Company had incurred in the disposition heretofore, under compulsion of the Act, of various properties (Puget Sound, El Paso Natural Gas &c.) and the fact that the Act had prevented the refunding of the preferred stock under the lower dividend rates prevailing for comparable preferred stocks, these losses and burdens should not equitably be borne entirely by the common stockholders, but shared as well by the preferred stock; that if the preferred stockholders were to be paid their respective redemption prices, they would be receiving the most they could have received and be left "unscathed and scot-free, while the common stockholders alone are left to bear all the losses and dislocations caused by the impact of Section 11"; and that, accordingly, payment of more than $100 per share plus accrued

Engineers' Exhibit No. 89 (Cont'd)

dividends to the preferred stock would be unfair to the common stockholders and would give the preferred stockholders a "windfall", which the Supreme Court in the Otis case said should not be done.

This claim of Engineers the Commission rejects, saying that although novel "it is without substance"; that the alleged "windfall" claimed to result to the preferred stockholders if they are paid their respective redemption prices is not the kind of windfall which the Supreme Court said must not result; that what the Supreme Court meant in this connection was "that the Holding Company Act should not be permitted to mature claims and thereby transform the existing value of a security in a going concern into a matured claim which might be greater or less than such existing value"; that they have found that under the Plan "full compensation to the preferred requires they be paid an amount equal to their redemption prices in order to satisfy their prior claim to the assets and earnings of the Company"; and that the common stockholders cannot contend that is unfair to them. In addition to showing that the Plan with the suggested amendments would be fair to the common, the Commission pointed out it would give the Company the opportunity of using its $17,000,000 of accumulated cash toward retirement of the preferred, thus cutting off the prior preferred dividends and hasten the day when dividends would be paid to the common.

In connection with the losses which it was claimed would fall on the common if the preferred received its respective redemption prices, we should, because of the difference in effect under the Act of findings of fact and conclusions of law, call attention to the fact that the Commission says (see footnote 52):

> "In passing, we should point out that we do not accept counsel's hypothesis that the *Act* caused the asserted losses. In all of its divestments, Engineers

Engineers' Exhibit No. 89 (Cont'd)

has been free in its choice of methods, and, within limits, to choose the time for divestment. All sales have been negotiated by Engineers at arms-length. If, as in the case of Puget Sound, the sale brought less than the carrying value on the books of Engineers, the indication is that the carrying value was excessive and not that the sale's price was low. It is significant that the market price of Engineers' Common when the Plan was filed was the highest since 1932, and that the price has been rising steadily since 1942 when the program of simplification got under way. As shown in Footnote 42, *supra*, Engineers' common reached a low of 1⅛ in 1935. By 1945 when the Plan was filed it had reached a high of 37".

The findings or rulings which the Commission has made in the opinion that the payment to the preferred stockholders of their respective redemption prices would be "fair and equitable" to both the preferred and common should not, we think, be treated as a conclusive finding of fact. Those findings or rulings seem rather to be in the nature of a statement of mixed law and fact which on review should be broken down into findings of fact and rulings of law.

The principal findings of fact involved therein we think have to do with (1) the investment value of the preferred stock and (2) the losses which Engineers claimed were suffered from the impact of Section 11 of the Act.

As to (1) above, the above-mentioned finding that the investment value of the preferred stock apart from the Act is equivalent to the respective redemption prices is clear cut and finds substantial evidence in the record. Furthermore it is a fact which Engineers admitted at the hearing, in its brief and on the argument. It appears clear, therefore, that that fact finding must be accepted without question.

Engineers' Exhibit No. 89 (Cont'd)

As to (2) above, it will be recalled that Engineers claimed certain losses which should equitably be borne by the preferred as well as the common. These included, among others, losses resulting from the forced sale of Puget Sound and El Paso Natural Gas, and that resulting from the fact that the impact of the Act had prevented the Company from refunding the preferred stock with its present relatively high dividend rates on the basis of the lower dividend rates for comparable securities now prevailing (For details as to these claimed losses see pp. 12-15 of Engineers' brief): In order to sustain Engineers' claim respecting these losses, it is important that these losses be recognized and found to have been caused by the Act. Not only does the Commission not find that these losses were caused by the Act, but in footnote 52, above quoted, they say they do not "accept counsel's hypothesis that the *Act* that caused the asserted losses". It is not improbable that a reviewing court might say this was tantamount to a finding that the losses were not caused by the Act so directly, at least, as to be used as an offset to the payment of the premiums to the preferred stock.

We come now to a consideration of the law involved in the findings of the Commission that the payment of the respective redemption prices to the preferred stock would be fair alike to the preferred stock and the common stock.

First, the Commission holds, despite the fact that it agrees with us that the proposed liquidation of Engineers is involuntary, that the provisions of the certificate of Incorporation of Engineers to the effect that on involuntary liquidation the preferred stock shall be paid $100 and accrued dividends and no more, are not brought into operation by a liquidation under Section 11. This holding they base on the majority opinion of the Supreme Court in the Otis case, which expressly so found by holding that a

Engineers' Exhibit No. 89 (Cont'd)

Section 11 liquidation was not within the contemplation of the parties in adopting such a charter provision prior to the passage of the Act, and would, therefore, not be allowed to mature the liquidation rights. It held on the contrary, that securities should for Section 11 simplification purposes be valued on the basis of a going concern apart from the Act. Chief Justice Stone and Justices Roberts and Frankfurter dissented, the dissenting opinion being written by the Chief Justice. The gist of the dissent was that there was no more reason not to apply the contract provisions than there would be to hold that a life insurance policy would not cover a death from a cause unknown at the time the policy was issued.

Whatever may be the merits as between these two conflicting opinions, it seems to us that it is not much use attempting to attack frontally or distinguish the Otis case. While it has been contended that the Otis opinion should be limited to its facts and does not mean the claim of the preferred stockholder can be enlarged above his involuntary liquidation preference, it seems to us that the logic of the majority opinion permits the application of the "fair investment value" theory even in such a case. Illustrative of this are the following excerpts from the majority opinion where the Court says:

> "The exercise of legislative power by Congress through §11(b)(2) to accomplish simplification as a matter of public policy and the Commission's administration of the Act by dissolution of this particular company results in a type of liquidation which is entirely distinct from the 'liquidation of the corporation, whether voluntary or involuntary' envisaged by the charter provisions of Power for preferences to the senior stock.
>
> This conclusion permitted the Commission to examine the *investment* values of the common and

Engineers' Exhibit No. 89 (Cont'd)

preferred stocks of Power." (p. 631) (emphasis supplied)

* * * * * *

"We reach the conclusion that the Securities and Exchange Commission applied the correct rule of law as to the rights of the stockholders *inter sese*. That is to say, when the Commission proceeds in the simplification of a holding company system, the rights of stockholders of a solvent company which is ordered by the Commission to distribute its assets among its stockholders may be evaluated on the basis of a going business and not as though a liquidation were taking place." (p. 633)

Five of the justices who joined in the majority opinion are still on the bench, namely, Justices Black, Reed, Murphy, Jackson and Rutledge (Douglas did not participate), while two of the dissenters, Chief Justice Stone and Justice Roberts, have been succeeded on the bench by Chief Justice Vinson and Justice Burton. Thus we think that the present membership of the Court affords little hope for obtaining a different holding as to the governing principle on the different facts of our case. This was indicated as our belief by the fact that, in the Engineers brief, we did not argue for a strict construction of the contract although we asserted, for equitable consideration, that the liquidation was involuntary.

Second, on our analysis of the opinion we think it fair to say that the Commission found in substance (a) that the investment value of the preferred stock (apart from the Act) was equivalent to its respective redemption prices and (b) this being so, it was fair and equitable alike to the preferred and common stocks to pay the preferred the respective redemption prices.

Engineers' Exhibit No. 89 (Cont'd)

Assuming that we have satisfactorily proved that the losses arising from dispositions of properties above-mentioned and the loss resulting from the Company's inability under the Act to refund the preferred stock on the prevailing lower dividend basis were "caused" by the impact of Section 11 of the Act, it might be urged with considerable force that the Commission has made an error of law in saying that it follows from the fact alone that the investment value of the preferred stock is equivalent to the respective redemption prices, that the payment of such an amount to the preferred stock is fair and equitable to both classes.

In other words, on the assumption that those other losses were caused by the Act, it would seem to us that the better view would have been for the Commission to have looked at the investment value of the common stock apart from the Act, as well as that of the preferred stock, and then determined what effect the Act had on both and shared the burdens of its impact between the two classes; and that a fair division of all the burdens and dislocations of the Act would result in paying the preferred stocks something less than their respective redemption prices.

From this, however, we do not mean to say that under all the circumstances we think it advisable to contest further the payment of amounts in excess of $100 and accrued dividends to the preferred stock.

One of the writers (Mr. Tucker) has frequently told the Company management that he thought that if the Company were going to win the premium point it would probably have to do so before the Commission. That thought was based on the fact, apparent to one who follows the court decisions dealing with Commission cases, that the courts are reluctant to override the commissions; that the courts are required by the Act to accept the fact findings of the Commission if they are based on any substantial evidence, leaving only the legal approach open for review. Further-

Engineers' Exhibit No. 89 (Cont'd)

more, the courts, even if they find the Commission has applied the law erroneously, seldom, if ever, reverse the Commission but rather reverse and remand for further consideration in the light of the correct law as shown by the opinions of the courts. Accordingly, the mere existence of this adverse Commission opinion on the premium point, viewed practically, makes the problem of sustaining the Company's claim respecting the payment to the preferred stock much more difficult.

In addition, the sustaining of such claim made by Engineers depends upon the fact, which ultimately will, in our opinion, have to be found by the Commission, that the losses &c. involved in the claim were "caused" by the impact of the Act. At the outset we are likely to be met with the claim that the Commission has already found that fact against us in footnote 52, above quoted. Even, however, if the Courts should not agree with the contention that that is in substance a finding against us, they would, in our opinion, do no more than remand the case to the Commission for further findings in that regard. Personally, we are not hopeful that in such circumstances we could expect a finding of fact from the Commission to the effect that the losses were "caused" by the Act. Footnote 52 at least indicates that the Commission is now entertaining a contrary view. Again even if the Commission should find that the losses were caused by the Act, the effect of such a finding in dollars on the payment of premiums on the preferred stock, *i. e.* whether all of the premium would be absorbed or if not, what part thereof would be absorbed, would certainly be held to be a fact to be found, on consideration of all the circumstances, by the Commission and not by the Court. Thus, the law, if found by the Court in our favor on the point, would do no more than require further factual findings by the Commission as to the effect to be given on the premium payment. So even if we were successful in the Courts on the

Engineers' Exhibit No. 89 (Cont'd)

law and got a remand, the application of the law would involve a fact to be found by the Commission. Thus the successful overcoming of the present predilection of the Commission that payment of the respective redemption prices would be fair and equitable though possible does not seem to us to be probably. Furthermore, it must be borne in mind in this connection that the burden of further contest of the amount to be paid to the preferred stockholders does not involve solely the ordinary litigation expenses but would include, if the preferred stock sustained its contention that it is entitled to the respective redemption prices, payments in addition to the premiums equal to an amount "to be determined by ascertaining the yield for each series of preferred on the basis of its dividend rate and the price ultimately deemed payable." It is obvious that this in itself would be a substantial burden.

It is, therefore, our conclusion that it is not worth while to contest further the payment to the preferred stockholders of the respective redemption prices and we recommend the filing of an amendment which will provide for such payment.

One of the writers (Mr. Tucker) is not unmindful of the fact that the present Plan providing for payment to the preferred stockholders of only $100 and accrued dividends per share was filed by the directors on his recommendation made in his opinion of July 26, 1945. Even in that opinion that writer stated that he could not, in view of the uncertainties introduced by the Otis case, say with assurance that such a Plan would be approved. Now it seems to that writer, that the holding of the Commission after consideration of all the points made in favor of such a payment in that opinion, (and of other points not made in that opinion) throws such an additional burden on the Company to sustain that position as to make it not worth while further to contest the point.

We point out that other holding companies than Engineers are raising similar points and that it is at least possi-

Engineers' Exhibit No. 89 (Cont'd)

ble that some of those cases may be taken to the courts and the premium not found to be payable under the facts of such cases. We do not believe that such an eventuality should prove to be embarrassing to you. The chance of the *Otis* case being distinguished from a case similar in facts to the Engineers case is, in our opinion, slight. Aside from that contingency, these cases are peculiarly ones which turn on the facts involved therein. As we have above stated, in view of the facts involved in our case and the adverse findings contained in the opinion, the likelihood of success in our case seems too remote to justify any further contest.

Very truly yours,

WM. E. TUCKER
T. JUSTIN MOORE

PREFERRED STOCKHOLDERS EXHIBITS FILED WITH SECURITIES AND EXCHANGE COMMISSION.

Preferred Stockholders' Exhibit No. 12.

Letter of C. W. Kellogg to Donald C. Barnes, dated July 27, 1945.

EDISON ELECTRIC INSTITUTE
420 Lexington Avenue, New York 17.

July 27 1945

Mr Donald C Barnes, President
Engineers Public Service Company, Inc
90 Broad Street
New York 4, N.Y

Dear Don

On account of absence on vacation I did not receive before the last Board meeting Bill Tucker's opinion on the redemption basis for the preferred stock under the 11(e) plan, so was not prepared to discuss it at the meeting yesterday. I have since read it through carefully many times and have the following comments to offer.

I—To my mind the preferred stock matter is very simple:

1. The 11(e) plan outlined at the meeting seems to me clearly a dissolution of the Company, even though it may take some time to consummate.

2. Being contrary to the interests of the Company and therefore undertaken solely due to requirements of law, it seems to me clearly involuntary.

3. Hence, as the charter provides in such cases, the preferred stockholders in such a dissolution are entitled only to $100 and accrued dividends. (Courts and commissions may disregard or override charter provisions, but I don't see how the Company on its own initiative is authorized to do so.)

Preferred Stockholders' Exhibit No. 12 (Cont'd)

II—With some of the arguments Bill sets up to support the above simple proposition, I am in complete disagreement.

(a) The veiled threat of personal loss to Directors if they awarded more than $100 a share to the preferred stock seems to me entirely improper. The Board should honestly apply their best judgment to the case without fear that their good faith would be questioned.

(b) The threat that it may not be possible to pay preferred dividends after Gulf and El Paso are disposed of, and no other utility investment available, seems to me not only entirely beside the point but not supported by the facts. Using the price in the proposed 11(e) plan and net earnings as a yardstick, Gulf and El Paso should bring $27,000,000. This, plus available cash, would make about $40,000,000 which, even with Government 2% bonds, would yield $800,000 annually, leaving only $1,300,000 to be obtained from Virginia (with over $5,000,000 net for common) to pay all preferred dividend requirements.

(c) The detailed discussion of "windfalls" impresses me as a purely ad hominem argument, which has no place in any consideration by the Board of the equities between preferred and common, assuming that the charter provisions are to be disregarded. In my opinion the possible trading profits of individual stockholders in their dealings in either class of the Company's stock are not matters of which the Board can take any cognizance for they are acting for *all* the stockholders.

III—What does disturb me in Bill's letter to the Board is his suggestion that our appeal to the Supreme Court is a lost cause and that therefore the Board should proceed with all speed to go ahead with the 11(e) plan, which would make the appeal valueless even if we did win it.

Preferred Stockholders' Exhibit No. 12 (Cont'd)

You will recall that both when we appealed to the Circuit Court from the dissolution order of the SEC and subsequently when we asked the Supreme Court for certiorari on the Circuit Court's ruling, careful consideration was given to the question whether it was justifiable to spend the stockholders' money on this litigation, in view of the apparently slim hope of success. You will recall that the decision to go ahead was based on the belief that our cause was just, that it was a matter of life and death to the Company and that therefore the Board would be recreant to its duty not to pursue the litigation to a final determination.

The Board has heretofore, by not acting contrarywise, perhaps assented to the conversations you all have had with the SEC on an 11(e) plan; but I believe now, as a matter of consistency and duty to the stockholders, it should definitely instruct the officers to cease and desist from any further discussions with the SEC about dissolution, until the issues raised by our Supreme Court case are disposed of by that body.

It is certainly not our fault that the court cannot hear our case, but that is no reason why we should let the case go by default.

There is not only the judicial angle but also the legislative one. You are aware of the investigation recently started by a special subcommittee of the House Interstate and Foreign Commerce Committee on the Holding Company Act. You will recall that last Summer I brought before another subcommittee of that committee (on the Boren Resolution) the substance of Dr. Waterman's report indicating that the alleged bases for enactment of the Holding Company Act (as set forth in the Act itself) were not based on the facts about such companies as they now exist. You will remember that Chairman Lea and other members of the subcommittee expressed themselves at the time and later as very much impressed by this disclosure. The present investigation by Representative Boren is obviously the out come of the foregoing. With the change in Administration leader-

Preferred Stockholders' Exhibit No. 12 (Cont'd)

ship and the admitted partial eclipse of the New Deal, it is certainly within the realm of possibility that Section 11 of the Holding Company Act might be amended to eliminate its most glaring defects.

This is another reason for proceeding as slowly as possible with 11(e) or any other dissolution plans, since, once consummated, no legislative or court action could ever "put Humpty Dumpty together again."

It is ten years this Summer since the Holding Company Bill was signed by President Roosevelt. Surely no harm can come from one or two years more delay before going ahead with dissolution.

Is it not true that we have everything to gain and nothing to lose by putting off dissolution to the latest possible moment to which legal or any other kind of delay can possibly put it?

In case this letter may seem critical, I want to add in closing that all the Directors with whom I have discussed the Company's status from time to time agree with me that you have handled its affairs in a masterly manner. From the viewpoint of the stockholder, Engineers has made greater improvement in the last decade than any other holding company, all of which has been due to your skillful guidance, sound judgment, initiative and firmness. In fact, it is because I feel so deeply the irreparable damage that would result to the Company you have so successfully built up that I feel no stone should be left unturned to conserve it.

As this is written to set forth various ideas for Board consideration, I am sending a copy of it to each member of the Board.

Sincerely yours,

C. W. KELLOGG

C. W. Kellogg

Note: The foregoing was transcribed from longhand draft sent by Mr. Kellogg to his secretary.

Preferred Stockholders' Exhibit No. 12-A.

Letter of D. C. Barnes to C. W. Kellogg, dated July 31, 1945.

ENGINEERS PUBLIC SERVICE COMPANY
(INCORPORATED)
90 Broad Street
New York 4

July 31, 1945

Mr. C. W. Kellogg,
Edison Electric Institute,
420 Lexington Avenue,
New York 17, N. Y.

Dear Bill:

I have your letter of July 27, 1945. Since kind words in these times are as rare as "a good deed in a wicked world" I want to acknowledge first the next to the last paragraph of your letter which I can turn to for comfort and happiness during the rest of my life. I don't feel that I deserve all of the credit which you have been kind enough to give me, as the performance of Engineers is an organization accomplished and not that of any individual.

I give below my reaction to the rest of the points in your very good letter, in the order in which they appear.

I. I am in complete accord with your three conclusions under this heading, which justify a decision not to provide for payment of any premium on the preferred stock under our 11 (e) plan.

II. In reference to your comment II (a) in regard to Bill Tucker's memorandum to the Directors of July 26 it seems to me that if, as you point out, in I (3) there is any doubt as to whether the preferred stockholders are entitled to a premium, the Directors would be guilty of wasting the assets if they voluntarily paid the premium, since once the preferred stockholders have been paid there would be no way in which the cash could be recovered for the common stockholders if it were later determined that the preferred

Preferred Stockholders' Exhibit No. 12-A (Cont'd)

stockholders were not legally entitled to such a payment. Under such circumstances I should think that a common stockholder might have proper grounds for suit against the Directors, particularly if the Company's counsel had advised the Directors before their action that he had grave doubts as to whether the premium was legally payable.

In reference to your point under II (b) I did not interpret Bill's statement at the bottom of Page 2, which is what I presume you are referring to, as a threat that Engineers would not be able to pay preferred dividends if it sold Gulf and El Paso and continued to own Virginia and say $40,000,000 or more of government 2% bonds, but that would create a situation which the Company could not afford "to let continue very long" because good business judgment would dictate that it retire the preferred stock, even if it had to pay a premium, rather than continue to pay approximately 5½% dividends for money invested in 2% securities, so that the forced sale of Gulf and El Paso and the inability to invest the proceeds in any business other than government bonds or similar low yield securities which might be permitted under the Act, forces an involuntary retirement of the preferred stock as a practical matter.

As to your comments under II (c), I am thoroughly in accord with your statement that the Board cannot take cognizance of profits of individual stockholders in their dealings in either class of the Company's stock, but it is not my understanding that Bill's reference to "windfalls" contemplated that. As I understand his point, he is comparing the situation of the preferred stockholders and the common stockholders each as a class and not as individuals. It is perfectly clear that as a class the common stockholders have suffered materially as a result of the impact of the Public Utility Holding Company Act and to take away from them $3,200,000 (the aggregate premium for voluntary redemption) in order to pay the preferred stockholders the maximum that they could ever hope to realize under any conditions on their preferred stock, would give to the pre-

Preferred Stockholders' Exhibit No. 12-A (Cont'd)

ferred stockholders a "windfall" which certainly violates my sense of equity and my lay interpretation of the following quotation from the Otis Case cited on Page 7 of Bill Tucker's letter:

> "Enforcement of an over-riding public policy should not have its effect visited on one class with a corresponding windfall to another class of security holders."

III. I am sorry I have not made clear to you, and I hope that the other Directors understood, that it was not my intention to consummate our proposed 11 (e) plan until we have had the decision of the Supreme Court on our appeal and had determined in the light of that, that the consummation of such a plan was in the interests of the stockholders. I have always felt and Bill Tucker and Justin Moore have both advised from the beginning that the chances of our securing relief from the Supreme Court were relatively small, but it has been my feeling that if there was any chance we owed it to our stockholders to secure a final determination of this issue.

I think it would be a great mistake for the Board to instruct the Officers to defer any further action on the 11 (e) plan until the decision of the Supreme Court is had for these reasons:

1. It would result in several months delay in putting $14,000,000 of idle cash to work. The saving in dividends on stock to be retired by the use of this money is approximately $2,100 per day.

2. We now have a good market for operating utility company common stocks and the success of our plan is dependent on a continuance of such a market for the reason that if stockholders have to sell some of their securities in order to secure the cash required of them under the Plan or in the event they are forced to sell their rights, they will be materially injured if at the time of such sale the market

Preferred Stockholders' Exhibit No. 12-A (Cont'd)

has receded materially. I am disturbed at the inescapable delay involved even if the Plan is filed in September.

3. I do not believe it will have an adverse effect on our Supreme Court case if we file now an 11 (e) plan which includes a reservation such as that in The North American Company Plan, namely, "In order to protect the constitutional and legal rights of all parties pending consideration of the Plan, the Company reserves the right to proceed with argument of its case before the Supreme Court of the United States at any time hereafter when a quorum of such Court may be available to participate in the decision of such case. The Plan is submitted, and all statements herein are made, with full reservation of all constitutional and other legal rights of the Company and its respective subsidiary companies and its and their respective security holders". If it is brought to the Court's attention at all that such a plan has been filed, it is readily explainable on the ground that the Company must put itself in a position where it can act promptly in the event of an adverse decision.

As to your reference to possible legislative relief, it is my personal opinion that we have no reasonable expectation of any favorable action by Congress before the Supreme Court will have acted and the Commission has had an opportunity to enforce its order. If the information which I have had through two independent sources is correct, we can expect no help from the present investigation by Representative Boren.

Since you sent copies of your letter to the other members of the Board, I am doing likewise in order that they may have an opportunity to consider these matters from both your viewpoint and mine before they come up for consideration at the next meeting of the Directors, now proposed to be held on September 5.

Yours very truly,

D. C. Barnes

DCB:MS

Preferred Stockholders' Exhibit No. 13.

Letter of W. E. Tucker to Board of Directors of Engineers, relative to Amendment No. 4 to the Plan.

December 11, 1945

To the Board of Directors of

ENGINEERS PUBLIC SERVICE COMPANY
(Incorporated)

Dear Sirs:

Amendment No. 4 to the Plan pursuant to Section 11(e) of the Public Utility Holding Company Act of 1935 for Divestment of Assets and Related Matters, filed by your Company with the Securities and Exchange Commission on September 10, 1945, is to be presented to you for approval on December 14th.

This Amendment has been prepared and is presented for action by you principally on my recommendation and I write to advise you with respect to its purposes and my reasons for recommending its approval and filing.

The Plan as filed and as heretofore amended is divided into three parts. Briefly stated, these three parts cover the following subject matters:

> Part I—The disposition and sale through the issuance of warrants, to common stockholders of Engineers, of the reclassified common stock of Gulf States Utilities Company for the purpose of raising a major portion of the money necessary to pay to preferred stockholders of Engineers $100 per share plus accrued dividends, the borrowing of the balance of the money necessary to make such payment to the preferred stockholders on a bank loan, the distribution of the reclassified common stock of El Paso Electric Company to the common stockholders of Engineers as a dividend in partial liquidation, and the cancellation of the service contracts with Epsco, Inc.;

Preferred Stockholders' Exhibit No. 13 (Cont'd)

Part II—The determination by the Commission as to whether any amount in addition to $100 per share of preferred stock should be paid to the preferred stockholders of Engineers; and

Part III—Provides broadly and without specific details for the liquidation of the liabilities of Engineers, and, within one year thereafter, for the distribution of the common stock of Virginia Electric and Power Company to the common stockholders of Engineers, or for the merger of Engineers with Virginia.

The substantial changes which Amendment No. 4 is designed to accomplish are as follows:

(1) The elimination entirely of Part III of the Plan; and

(2) The insertion at the end and as a part of Part I of the Plan, of a new provision which will provide for the dissolution of Engineers within 60 days after Part I of the Plan shall have become effective and for its final liquidation within the period specified for dissolved corporations under the General Corporation Law of the State of Delaware, under arrangements whereby the directors of Engineers in office at the time of dissolution, with power to provide for their succession and borrow money, shall administer the liquidation in such a way as to pay off the liabilities to the extent possible from assets of Engineers other than the common stock of Virginia Electric and Power Company, and to accomplish the ultimate liquidation of Engineers by a distribution of as many as possible of the shares of Common Stock of Virginia Electric and Power Company, pro rata, among the Common Stockholders of Engineers.

Preferred Stockholders' Exhibit No. 13 (Cont'd)

I come now to a statement of the reasons which have led me to recommend to your Board the approval and filing of this Amendment.

As the Plan was originally set up, Part III dealt with the elimination of Engineers as a corporate entity in an alternative manner. It provided for either the liquidation of Engineers as a corporation or its merger into Virginia. It is obvious that if the ultimate disposition of Engineers as a corporation was thus left in the alternative, it was not possible at this time to give that ultimate disposition any definite direction. The terms of the merger, for example, obviously cannot be worked out until the liabilities of Engineers have been determined and liquidated and the assets to be involved in the merger definitely determined. The idea of a merger was originally included in Part III because, without having the opportunity at the time the Plan was filed fully to canvass the situation, it was believed that it was possible that following the merger procedure instead of the liquidation procedure might possibly lead to a substantial tax advantage. It is my understanding that this problem has been further analyzed since the date of the filing and that it now develops that only comparatively slight tax advantages will result from the merger *vis-a-vis* the liquidation. The staff of the Commission apparently had some fears that the proposed Plan might not result in the actual dissolution of Engineers within a satisfactory length of time, particularly in view of the fact that Part III of the Plan was separate and distinct from Part I of the Plan and could be and would have to be amended after Part I of the Plan had been fully carried out. The staff suggested that if Part III was to be left in its present form we should include therein a submission to the jurisdiction of the Commission whereby if Engineers were not eliminated within a specified time the Commission could itself step in and enforce liquidation. The staff also have expressed themselves in the past to the effect that the continuation of Engineers over Virginia alone would be illogical and unnecessary.

Preferred Stockholders' Exhibit No. 13 (Cont'd)

Furthermore, it would seem to me that the presentation of the considerations from which it will be determined whether the preferred stockholders of Engineers should be granted, in connection with the retirement of their preferred stock, any amount in addition to $100 per share, plus accrued dividends, will be more clearly brought into focus if the merger suggested should be abandoned entirely and the dissolution of Engineers as a corporate entity incorporated into Part I of the Plan.

The Certificate of Incorporation of Engineers contains a provision:

> "In the event of any liquidation, dissolution or winding up of this Corporation, or any reduction of its capital stock, resulting in any distribution of its assets to its stockholders, the holders of the preferred stock of each series shall be entitled to receive, for each share thereof, an amount equal to $100, together with all dividends accrued or in arrears thereon, plus, in case such liquidation, dissolution or winding up or reduction shall have been voluntary, the fixed redemption premium for such series, if any, before any distribution of the assets shall be made to the holders of the common stock; * * *".

The fixed redemption premiums mentioned are for the $5 Dividend Preferred Stock $5 per share, and for the $5.50 and $6 Dividend Preferred Stock $10 per share.

While it may be true that the question before the Commission and the courts respecting the amount which, under the Plan, shall be paid to the preferred stockholders in connection with the retirement of their stock, is a broader question than the mere technical application of this clause, I have always felt that the clause was a factor to be considered in this connection and that substantively, the "liquidation, dissolution or winding up of this Corporation, or any reduction of its capital stock resulting in any distribution of its assets to its stockholders" involved in the Plan

Preferred Stockholders' Exhibit No. 13 (Cont'd)

were forced on the Company by the impact of the Act and could not fairly be considered voluntary in any proper sense.

Accordingly, I have been desirous of obtaining in as clean-cut and direct a manner as possible, whatever benefit there may be legally from presenting directly and as a part of the issue as to the amount to be payable to the preferred stockholders, this Charter provision and a liquidation which, if the Charter provision is to have any effect, would clearly fall within its terms.

The way to accomplish this result it seems to me is to follow the course which is included in Amendment No. 4 by abandoning entirely the alternative provision contained in Part III and incorporate the dissolution provision expressly in Part I where it will be related directly to the payment of $100, plus accrued dividends, proposed to be made to the preferred stockholders in Part I.

The question whether any amount in excess of $100 per share should be paid to the preferred stockholders is an involved one and I think it will, as I believe you will understand from what I wrote in my opinion of July 26, 1945 in connection with the approval of the original Plan, be determined on the basis of what is fair and equitable to the preferred stockholders as well as to the common stockholders. Under these circumstances, you will understand the reason why I cannot, with any assurance, tell you that if Amendment No. 4 is adopted, it will necessarily have a deciding effect on this issue. I do think, however, that the adoption and filing of the Amendment will bring the dissolution of Engineers into its proper relation with the question respecting the amount to be paid to the preferred stockholders for whatever effect a definite program of dissolution and liquidation of Engineers may have on that problem.

Accordingly, I am, as above stated, recommending its adoption and filing.

Very truly yours,

W. E. TUCKER

Preferred Stockholders' Exhibit No. 14.

Thomas W. Streeter
Morristown
New Jersey

July 26, 1945

Revised July 30, 1945

Re Engineers Public Service Co. directors' meeting
of July 26, 1945

Statement of Thomas W. Stfeeter.

I wish my vote recorded against any plan which proposes retiring the preferred stock at par instead of its call price as, in my opinion, an attempt to retire the preferred stock at par, while the equity in the properties remains with the common stock, would not, if carried out, be the "involuntary liquidation" referred to in the charter of the company. Such a partial retirement of the outstanding capital stock would, in my opinion, create a windfall for the common stockholders at the expense of the preferred stockholders.

I might also say that even if such partial retirement of the capital stock were the "involuntary liquidation" of the charter, it is highly inconsistent to rely on the Public Utility Holding Co. act as authority for the action, while we continue to assert in the Supreme Court of the United States that that act is unconstitutional.

Preferred Stockholders' Exhibit No. 16.

Excerpt from Fifth Supplemental Indenture of Virginia Electric and Power Company to The Chase National Bank of the City of New York, Trustee, dated May 1, 1945.

Pages 67-69:

ARTICLE 4.

Additional Covenants of the Company

§4.01. The Company covenants that, so long as any Bonds of Series E remain outstanding, the Company will not (a) declare or pay any dividend or make any other distribution to any holder of Common Stock (other than a dividend payable in shares of Common Stock) or (b) purchase or acquire or otherwise retire for a consideration (otherwise than from the proceeds of sale of shares of Common Stock) any share of Common Stock if the sum of (i) the aggregate amount so paid, distributed and or applied after September 30, 1944 (exclusive, however, of dividends paid on any class of stock before January 1, 1945), (ii) $55,000 a month in respect of such of the first 25 full calendar months after September, 1944 as shall have elapsed (but not in respect of any succeeding calendar month), and (iii) $75,000 a month in respect of such of the first 116 full calendar months after September, 1944, as shall have elapsed (but not in respect of any succeeding calendar month) would exceed the net income of the Company available for dividends on shares of Common Stock accumulated after September, 1944. Net income of the Company available for dividends on shares of Common Stock, for the purposes of this §4.01, shall mean the sum of operating revenues and non-operating income net of the Company, less (i) all proper deductions for operating expenses, depreciation [which, for the purposes of this §4.01, shall be not less than 15% of the total operating revenues (after deducting therefrom the sum of (a) the

Preferred Stockholders' Exhibit No. 16 (Cont'd)

cost of electricity and gas purchased for sale or resale (and of any other products so purchased if the revenues therefrom are included in such total operating revenues), or purchased for exchange for other products to be sold if the revenues therefrom are included in such total operating revenues and (b) all rentals paid by the Company for property used by it in the generation, transmission, distribution or sale of electric energy or gas and included or reflected in its operating expense accounts after September 30, 1944) of the Company from September 30, 1944 less the aggregate of all expenditures made by the Company from September 30, 1944 for maintenance and repairs], taxes, interest charges, and other income deductions (including amounts charged against income for amortization of utility plant acquisition adjustments), as shall be determined in accordance with such system of accounts as may be prescribed by governmental authorities having jurisdiction in the premises or in the absence thereof in accordance with recognized accounting practice applicable to companies engaged in a business similar to that of the Company and (ii) dividend accruals on all stock of the Company other than Common Stock; *provided*, that in computing the amount of such net income no deduction or adjustment shall be made for or on account of (a) any profits realized or losses sustained on the sale of any investment securities or capital assets or any change in the book value of, or any appreciation or depreciation in the value of, any assets owned by the Company for any reason whatsoever; (b) any earned surplus adjustment properly applicable to any period or periods prior to September 30, 1944; (c) premiums that shall be paid on the redemption or retirement of any shares of preferred stock of the Company; or (d) any costs, expenses, taxes or charges arising out of or incurred in connection with the consummation of the merger of Virginia Public Service Company into the Company, including in such costs, expenses, taxes and charges, but without limiting the generality of the fore-

Preferred Stockholders' Exhibit No. 16 (Cont'd)

going, all charges for redemption premiums, double interest, discount, and other costs and expenses incurred in connection with the redemption of the $26,000,000 principal amount of First Mortgage Bonds, 3¾% Series due 1972, and $10,500,000 principal amount of Sinking Fund Debentures of Virginia Public Service Company, the issuance and sale of $23,000,000 principal amount of Bonds of Series D of the Company, the issuance of $5 Dividend Preferred Stock of the Company in connection with said merger and the solicitation of proxies for stockholders' meetings held in connection with said merger; and *further provided* that the words in the foregoing enumeration are not intended to require or increase any deduction for or on account of any transactions or entries not so enumerated.

ENGINEERS PUBLIC SERVICE COMPANY

Postwar Potentialities

Based upon our estimate of earning power of Virginia Electric & Power Company, we believe the common stock of Engineers Public Service Company should work out to a value of between $24 and $38 a share.

In compliance with Securities and Exchange divestment orders (although still contested by the company) it is expected that Engineers Public Service Company will eventually wind up with Virginia Electric & Power Company as its sole underlying subsidiary.

For all practical purposes, the value of Engineers Public Service Company depends entirely upon the value of Virginia Electric & Power Company.

We estimate that the postwar earnings of Virginia Electric & Power Company will be in the neighborhood of $1.65 per share. In our opinion, these earnings justify a market value of between $16 and $24 a share. This results in a potential value of Engineers Public Service Company common of between 24-38.

Preferred Stockholders' Exhibit No. 26-A (Cont'd)

Elimination of Preferred

The chief subsidiaries of Engineers Public Service Company are the Gulf States Utilities Company, Virginia Electric & Power Company, El Paso Electric Company and Western Public Service Company. The Parent Company has been ordered by the Securities and Exchange Commission to divest itself of everything except Gulf States Utilities or Virginia Electric & Power Company. This order has been contested by the Company and carried to the Supreme Court where it is now awaiting a decision. In its preliminary annual report for 1944, Engineers Public Service stated as follows:

"If the outcome of the present litigation involving Section 11(b)(1) shall make it necessary or desirable to do so, it is hoped that it will be possible to develop a plan under Section 11(e) which will meet with the approval of the SEC under which Engineers' interest in Gulf States Utilities Company and El Paso Electric Company (Texas) would be distributed to its security holders through liquidating holding companies, the preferred stocks of which would be distributed to the preferred stockholders of Engineers and the common stocks of which would be distributed to the common stockholders of Engineers. The net income of such liquidating holding companies would be used exclusively for payment of preferred dividends and retirement of their preferred stock at $100 per share and accrued dividends. The two remaining smaller properties would be disposed of by sales when such sales could be made on an advantageous basis and the proceeds from such sales would be devoted to the retirement of the preferred stock of the liquidating holding companies. When the preferred stocks of such holding companies had been entirely retired, the common stock of their subsidiaries would be distributed pro rata in liquidation to their common stockholders. Upon establishment of such liquidating holding companies the mutual service

Preferred Stockholders' Exhibit No. 26-A (Cont'd)

company, located in New York, would be dissolved. Engineers, as the parent of Virginia Electric & Power Company alone, would also proceed to liquidate in the same manner as proposed for the liquidating holding companies over Gulf States Utilities Company and El Paso Electric Company when the tax advantages of retaining such relationship were deemed no longer of present or prospective value''.

There is no way of telling whether this plan will be allowed. However, since the SEC wants Engineers to dispose of all its assets except one subsidiary, let us assume that Engineers is forced to liquidate everything but Virginia Electric & Power Company and see what valuation emerges. An estimate of values to be expected in liquidation follows:

ESTIMATE OF PROBABLE PRICE

	Low	Medium	High
El Paso Electric	$ 5,000,000	$ 6,000,000	$ 7,000,000
Western Public Service	1,000,000	1,500,000	2,000,000
Net Current Assets	7,000,000	7,500,000	8,000,000
Gulf States Utilities Common	20,000,000	25,000,000	30,000,000
	$33,000,000	$40,000,000	$47,000,000

As of December 31, 1944, Engineers Public Service Company had $39,245,500 Par Value of Preferred stock outstanding. About $3,500,000 more would be required if the Company were compelled to pay the call prices for the preferreds. However, it seems unlikely that the company will have to pay the call prices, but even if it is required to do so, our estimate of a medium valuation of $40,000,000 for assets other than Virginia Electric & Power Company, plus the $3,387,000 received from sale of Savannah Electric & Power Company in February 1945, should cover the preferred stock.

On this basis, it is clear that the value of the common stock of Engineers Public Service Company assuming retirement of the preferreds through sale of other assets, depends entirely on the value of Virginia Electric & Power

common. Presented, therefore, is an analysis of the factors upon which we base our estimate of the probable value of Virginia Electric & Power Company.

VIRGINIA ELECTRIC & POWER COMPANY

This company, a merger of Virginia Electric & Power Company and Virginia Public Service Company, forms a well diversified integrated operating company. It services 990 communities and adjacent rural areas, primarily in Virginia, and also sections of North Carolina and West Virginia. Population served is estimated at 1,694,000. The metropolitan area outside of Washington, D. C. is served by the Company, also Richmond, Virginia, Newport News, Norfolk, Portsmouth and Petersburg, and numerous other cities and towns. Its lines connect with those of Appalachian Electric Power Company, Carolina Power & Light Company and Potomac Electric Power Company.

Traction Property Sales

In December 1944 and March 1945, Virginia Electric & Power Company disposed of all of its transportation properties for approximately $4,520,200. The balance sheets of Virginia Electric & Power Company and Virginia Public Service Company for 1943 indicated that the transportation properties sold had a book value of about $17,200,000, less substantial reserves. It is apparent, therefore, that a very considerable tax loss will be available to the Company, as a result of these sales.

Capitalization and Surplus

Capitalization of the merged Company consisted, on December 31, 1944, of $63,500,000 of bonds and $13,850,000 of notes payable 1945-54, a total debt of $77,350,000. However, the company expects to offer $59,000,000 1st and Refunding bonds due 3/1/75 to refund all of its bonds, now consisting

Preferred Stockholders' Exhibit No. 26-A (Cont'd)

of $37,500,000 1st and Refunding 3½s of 1968, $3,000,000 3⅛s due 1971, and $23,000,000 3s due 4/1/74. Debt will then consist of $59,000,000 of 1st and Refunding bonds and $12,715,000 Serial Notes or a total of $71,715,000 and debt reduction will total $5,635,000. Five Percent Preferred stock was outstanding at the close of 1944 at $28,949,100 and common stock $13,546,777. On a pro forma basis, earned surplus was $6,819,861, but dividends from this account are restricted to earnings subsequent to September 30, 1943, after deducting the sum of $55,000 per month for the first thirty-seven months after September 30, 1943, and $75,000 per month for ten years after the merger shall have been completed. Thus, until October 30, 1946, earnings of $1,560,000 per year are restricted and after October 30, 1946, this restriction is $900,000 per year until June 1954. However, these restrictions are not too serious, being $0.53 per share of Virginia Electric common until October 30, 1946, and then only $0.30 per share until May 1954.

The deductions from income to eliminate writeups to be charged off over a fifteen year period amount to $693,168 per year, and are being shown as a deduction on the income statement.

Plant and Property

The company carries its properties at $136,196,209, of which $11,237,468 are Utility Plant acquisition adjustments. Reserves for depreciation were $17,424,960, leaving a net plant figure of $118,771,249.

Rate Base and Rate of Return

Before the war, most electric utilities were permitted in most states to earn 6% on the rate base after all operating expenses, taxes and depreciation. The sudden sharp increase in income taxes and excess profits taxes has confused this whole formula and some utilities are earning less than 5% after taxes.

Preferred Stockholders' Exhibit No. 26-A (Cont'd)

To arrive at an estimated rate base net working capital equal to about $7,000,000 would seem a fair estimate for inclusion in the rate base, making the estimated net property value for rate making purposes approximately $125,000,000.

If the Commission uses the net property basis as a rate base, our estimate of postwar earnings of $8,600,000 after Income Taxes estimated at 40% would be 7.2%.

The difficulty in arriving at an appraisal of the earning power of the gas and electric properties only of Virginia Electric & Power Company and Virginia Public Service Company is due not only to the fact that both were operated separately until last May (1944) but also because each had transportation properties which have all been sold recently. Separate figures are still not available in detail for past years, but fortunately the company published a breakdown of revenues by classes of business and a segregation of operating expenses in the prospectus covering the preferred stock issued in May 1944; (pages 24 and 25). Taxes and depreciation were not segregated by departments. However, we have used the company's figures to arrive at an estimate of earning power.

We feel that a company has little reason to complain about taxes unless the Company is earning less than 6% on its property value after *all* taxes. The problem today is to try to arrive at some estimate of postwar earning power that seems reasonably realistic and then to appraise the effect of a 40% tax on net income as estimated.

Earnings After Traction Sales.

Income figures pertaining to 1944 earnings show gross revenues of $39,372,508, and operating expenses, maintenance and depreciation totaling $19,800,916, leaving a balance of $19,571,592 for taxes. After $11,108,938 for taxes, gross income was $8,417,293. After allowing $2,400,000 for fixed charges and $693,168 for amortization of plant acquisition adjustments, net income was $5,324,125. Deducting

Preferred Stockholders' Exhibit No. 26-A (Cont'd)

$1,447,455 for Preferred dividends, there remained $3,876,670 for the 2,938,455 shares of Common, equal to $1.30 per share. However, in its 1944 report, the company added back into net income $609,949 as a reduction in Excess Profits Taxes resulting from the amortization of emergency facilities. This increased net income to $4,486,619, equal to $1.52 per share.

In our estimate of electric and gas earnings for past years as shown in the tabulation, we have estimated depreciation at 10% of gross and local taxes at 8% of gross. Checks we have made have led us to believe that these percentages are not far out of line, although they are presented only as estimates. We have followed this table with a breakdown of electric sales by divisions so as to indicate where the greatest growth has occurred. We look for domestic sales in this area to hold up extremely well after the war—even better than commercial sales, which may decline 10 to 20% because in this particular company this classification has included many war industries. Wholesale power sales will show a substantial drop because of the presence in this area of a few large plants which are particularly active in wartime only, such as shipyards, etc. Accordingly, we expect this company's business to drop from the 1944 gross revenue level reported of $39,372,508 to around $32,500,000. However, this loss should be offset by reduced taxes. In 1944 Gross Income after all taxes was only $8,417,293, and we estimate that when income taxes are 40% and excess profits taxes are eliminated, this company should earn $9,350,000 after all taxes, but before $693,168 amortization of plant acquisition adjustments and $8,600,000 if such amortization is deducted as an operating expense.

If we assume that operating expenses and maintenance are about 41% of gross, as they were in recent years, they would be $13,325,000. Depreciation is estimated at $3,000,000 and taxes other than Income Taxes at $2,750,000. Income taxes at 40% would be $4,172,000 and amortization of Plant acquisition adjustments would be $693,168.

Pro Forma Statement of Income Eliminating Traction & Bus Earnings

Preferred Stockholders' Exhibit No. 26-A (Cont'd)

Earnings for Common

Gross income on this basis would be $8,600,000 or 7.15% on the $120,000,000 estimated rate base, even after 40% Income Taxes, while fixed charges of $2,300,000 would leave net income at $6,300,000. Preferred dividends of $1,447,455 are deducted, leaving $4,853,545 for the common, or $1.65 per share.

There are 1.533 shares of Virginia Electric & Power common for each common share of Engineers Public Service. Thus earnings of $1.65 would be equivalent to $2.53 per share on Engineers Public Service common. However, the above earnings make no allowances for expenses and taxes of Engineers Public Service Company. These are estimated at $500,000 per year which would reduce our estimate to $4,352,545 of earning power, or $1.48 per share of Virginia Electric and $2.27 per share for Engineers Public Service common.

Because of the huge amount of excess profits taxes being paid by this Company, some people emphasize the cushion this provides against a decline in earnings. This is true only as long as there are excess profits taxes. We expect these taxes to be repealed, at least for utilities, when the war with Japan ends. The "cushion" will then no longer exist.

Conclusion:

The equity of the common stock will be gradually improved through the elimination of $10,396,966 of intangibles being written off at the rate of $693,168 per year for fifteen years and the maturity of $11,684,979 of notes due 1945-54. The company does not face any maturity problems for many years, since its notes can be retired by use of depreciation cash from income. Therefore, the situation is one that should get stronger year by year.

Virginia Electric & Power Co. is a high grade operating company and its common stock is worth 15 times earnings. We estimate postwar earning power of $1.65 per share,

Preferred Stockholders' Exhibit No. 26-A (Cont'd)

which at 15 times earnings would give a value of $24.75 per share of common equivalent to $38.00 per share of Engineers Public Service common. Debt is being reduced almost six million dollars through sale of traction and bus properties and the consequent tax loss of about $15,000,000 on these properties will further add to cash through reduced tax payments.

Our estimate of $24.75 per share of common of Virginia Electric may seem high, but even if ten times earnings is used, the resulting $16.50 of Virginia Electric & Power earnings share, makes Engineers Public Service Company common worth $24.00 per share.

Until Engineers Public Service is able to eliminate its preferred stock, the position of its common stock will be somewhat uncertain. Nevertheless, the whole system is getting better year by year and the intrinsic value of its subsidiaries should be maintained and gradually improved. Therefore, even though dissolution of the system should be delayed until after the war, the true value of Engineers Common should hold and gradually improve.

All of this report is based on the assumption that Engineers Public Service Co. disposes of all properties except Virginia Electric & Power and is able to retire its preferred stock with the proceeds of the sale or exchange of the other subsidiaries. If the liquidating holding company plan described on the fourth page of this study should be adopted, an entirely different set of values for Engineers Public Service common would emerge.

April, 1945.

May 14, 1945

An Appraisal of
ENGINEERS PUBLIC SERVICE

We have recommended Engineers Public Service repeatedly since early 1944. In connection with its sharp advance during the last few weeks we have received many inquiries as to the ultimate breakup value of the company's assets. The following memorandum has been prepared in response to these requests.

At the present price of 23, Engineer's common has lost much of its immediate speculative appeal but we still consider it an attractive long-term investment for gradual appreciation.

Engineers Public Service common, reporting consolidated net income of $2.50 per share, is currently selling at 23. While no dividends are being distributed, retention of

Preferred Stockholders' Exhibit No. 26-B (Cont'd)

earnings is building up the equity of the common stockholder. During the past few years many steps have been taken to clean up the structure of the holding company and at the present time all subsidiaries appear to be in excellent financial position.

In the table below we assume sale or disposal of all holdings of the company except Virginia Electric & Power and retirement of all outstanding preferred shares of Engineers. According to our estimates, Engineers Public Service common stock is valued at $32.80 per share, of which $30 represents the investment in Virginia and $2.80 represents the excess value of the other holdings over and above the amount needed to retire the preferred issues.

	Estimated Breakup Value	Per Share Common
Parent Company working capital, Dec. 31, 1944	$ 3,748,000	
Proposed sale of Savannah Electric Power	3,387,000	
Proposed sale of Missouri Service & North Kansas Power	850,000	
Special dividend of El Paso Electric	900,000	
Adjusted Working Capital	$10,885,000	
Gulf States Utilities	$26,000,000	
El Paso Electric	7,100,000	
Western Public Service	650,000	
Total Properties except Virginia Elec. & Power	$44,635,000	
Less Preferred Stock at par	39,245,000	
	$ 5,390,000	$ 2.80
Virginia Electric Power	57,300,000	30.00
Total Value Engineers Public Service Common	$62,690,000	$32.80

General

Engineers Public Service Co. is one of the few utility holding companies with a relatively simple capitalization. No parent company debt, no intermediate holding companies and no system writeups complicate the structure.

Preferred Stockholders' Exhibit No. 26-B (Cont'd)

Properties consist of three major utility operating companies and four minor utility enterprises. All of these subsidiaries are in good financial position and could be readily sold or distributed to the public without recourse to time-consuming intermediate steps.

Although dissolution proceedings should be a relatively simple process, Engineers Public Service has been fighting the order of divestment originally issued by the SEC on October 6, 1942. The SEC at that time ordered Engineers to divest itself within one year of all its properties except Virginia Electric & Power and to cause that company to dispose of its gas and transportation facilities. Engineers in reply filed an appeal with the U. S. Court of Appeals for the District of Columbia for a review of this order. On November 22, 1943, the court set aside the order and remanded the case to the SEC for further consideration. The court did not find that the divestment order of the SEC was unconstitutional, but it held that Engineers should have more time to determine whether it desires to retain Virginia Electric & Power or Gulf States Utilities as its single integrated property, and that there was no basis in the Public Utility Holding Company Act of 1935 for the order demanding divestment of the transportation properties of Virginia Electric & Power. The court at the same time upheld the constitutional validity of Section 11 (b)(1) of the Public Utility Holding Company Act (providing for a single integrated system). Both the SEC and Engineers appealed the decision of the court to the Supreme Court and writs of certiorari were granted on June 5, 1944. No date has yet been set for a hearing and it is understood that the self-disqualification of four Justices will make it impossible to decide this case because of the lack of a quorum.

It had been previously officially announced that the Supreme Court, for the same reason, would be unable to pass on the North American Co. case involving a test of the so-called "Death Sentence". The Justice Department has

Preferred Stockholders' Exhibit No. 26-B (Cont'd)

urged Congress to reduce the quorum of the Supreme Court from 6 to 5 Justices in order to permit disposal of these cases, but Congress has shown favor towards a bill to make Circuit Court decisions final when the Supreme Court is unable to act for lack of a qualified quorum. In what manner the controversial matter of disintegration will finally be resolved cannot be foretold, but it is significant that Engineers, in its annual report for 1944, outlined a plan for future disintegration if the present litigation should make such action necessary or desirable.

The Management's Plan of Liquidation

According to this tentative proposal three liquidating holding companies would be formed around El Paso Electric Company, Gulf States Utilities Co. and Engineers Public Service Company proper, which at that time would own only the equity of Virginia Electric & Power Company. The preferred stock of Engineers would be exchanged for preferred stocks of the three liquidating companies, while the common stock of Engineers would receive the common stocks of the new companies. All net income of the liquidating companies would be used exclusively for payment of preferred dividends and for retirement of their preferred stock at $100 per share. The remaining smaller properties would be sold and proceeds used to retire preferred stock.

While the company has described its intention to comply, if necessary, with Section 11(b)(1) of the Utility Holding Company Act through the vehicle of these liquidating holding companies, the SEC has not yet passed on this very slow and protracted method of dissolution, and we believe that objections might well be raised against it by the SEC as well as by stockholders.

As shown in our detailed discussion below, the purchaser of Engineers Public Service common at its present price of 23 is in effect acquiring well-run public utility operating companies at a 30% discount from prices paid for similar

Preferred Stockholders' Exhibit No. 26-B (Cont'd)

stocks owned directly by the public. We do not know how or when the litigation over disintegration will be settled, nor is it possible to estimate the time which will be required to formulate and carry through a reasonable plan of liquidation if and when the courts finally uphold the SEC. However, we feel that public utility stocks are basically attractive and are likely to advance over a period of time. A higher general valuation for the securities of the industry should be reflected in the price of Engineers common stock and should be magnified by the leverage factor introduced by the preferred issues of the system. In addition, as time passes and breakup prospects become more immediate, the 30% discount should be gradually reduced and ultimately eliminated.

The Operating Subsidiaries

In the appendix we have prepared a detailed comparison of Virginia Electric & Power and Gulf States Utilities with 6 operating utilities having a ready market. In this table we show most of the figures and ratios which are of importance in evaluating utility issues.

The comparison in the appendix was prepared with the intention of making the income reports of the various companies as uniform as possible in order to make valuation of Virginia Electric & Power and Gulf States Utilities more precise. Thus adjustments were made for all recent refinancing operations which substantially reduced fixed charges after making allowances for tax offsets. Earnings were stated before and after current charges for amortization of intangibles without regard to the fact that some companies reported them as a deduction from profit and loss while others made direct charges to surplus. Similarly we made adjustments for all non-recurring tax savings and other non-recurring items as explained in the footnotes to the appendix.

Preferred Stockholders' Exhibit No. 26-B (Cont'd)

We believe that this comparison lends support to our appraisals, which are used in figuring breakup values.

Virginia Electric & Power Co. This company is engaged in the business of generating and distributing electricity in an area in Virginia, northeastern North Carolina and central West Virginia, comprising about 29,200 square miles. The population serviced is estimated at 1,694,000. The largest cities are Richmond, Norfolk, Portsmouth, Newport News and Alexandria, Virginia. Gas is sold in a smaller territory with a population of 356,000.

On May 26, 1944, the company acquired by merger the business and properties of Virginia Public Service, a subsidiary of General Gas & Electric in the Associated Gas & Electric system. Total consideration paid for this acquisition in bonds, preferred stock and cash was $59,554,000. In connection with this merger a general refunding operation of outstanding bonds and preferred stock of Virginia Electric & Power was undertaken. On December 29, 1944, the company sold all of its transportation properties in Richmond, Norfolk and South Norfolk, Virginia, for $3,228,000 in cash. The remaining transportation properties of the company were sold on March 31, 1945, for $1,292,000. The total effect of the sale of transportation properties is to reduce the pro-forma earnings of Virginia Electric & Power for the year 1944 by $319,000. A new refunding plan involving all of the outstanding mortgage bonds of Virginia Electric & Power has just been completed and a $59,000,000 2¾% 1st Mortgage issue has been placed on the market.

Classification of Revenues—The growth of the company's business over the past five years and the classification of revenues is shown in the table below:

Preferred Stockholders' Exhibit No. 26-B (Cont'd)

	Residential and Rural.	Commercial	Industrial (—000 omitted)	Other	Total
1944					
Virginia Elec. & Pr.	$13,418	$11,738	$ 7,561	$ 3,256	$35,973
In % of Total:					
Virginia Elec. & Pr.	37.3%	32.6%	21.0%	9.1%	100%
All elec. util.	35.8%	24.9%	31.9%	7.4%	100%
1939					
Virginia Elec. & Pr.	$ 9,016	$ 6,516	$ 4,527	$ 1,498	$21,557
In % of Total:					
Virginia Elec. & Pr.	41.9%	30.2%	20.9%	7.0%	100%
All elec. util.	38.7%	28.7%	25.3%	7.3%	100%
1944 Increase over 1939:					
Virginia Elec. & Pr.	49%	80%	67%		66%
All elec. util.	31%	23%	80%		40%

Although the company is serving the shipbuilding centers of Norfolk and Newport News, industrial revenues have not increased disproportionately since 1939 if compared with the sharp rise in industrial revenues of all utilities. Overall revenues have increased more than those of the industry as a whole but the increase has been concentrated in domestic and commercial revenues, where the danger of declining sales after the war is usually regarded as minor.

Earnings—On the following page are shown the proforma earnings of Virginia Electric & Power for the year 1944, giving effect to the earnings of Virginia Public Service from January 1, 1944 to May 25, 1944, prior to the merger, sale of transportation properties and both refunding operations.

Operating Revenues		$39,372,508
Operating Expenses	$14,806,805	
Maintenance	2,284,599	
Depreciation	2,709,512	
Federal income and excess profits taxes, excluding reductions from refunding operations and other non-recurring charges	7,816,745	
Taxes—Other	3,292,193	
Net Operating Revenues		$ 8,462,654
Other income		45,361 (loss)
Balance		$ 8,417,293

Preferred Stockholders' Exhibit No. 26-B (Cont'd)

Interest and amortization of debt discount	2,409,075
Amortization of plant adjustment	693,168
Net income	$ 5,315,050
Reduction in federal excess profits taxes resulting from the amortization of facilities allowable as emergency facilities under the Internal Revenue Code, which facilities are expected to be employed throughout their normal life and not to replace existing facilities	609,949
Balance	$ 5,924,999
Preferred dividend requirements	1,447,355
Balance for common stock and surplus	$ 4,477,644

We believe that reduction in federal excess profits taxes, amounting to $610,000, which results from the amortization of emergency facilities over five years is an item which should not be added back to earnings as was done above in line with the procedure followed by the company. While it is true that these facilities will be used over a period far longer than five years, it does not seem conservative to show the rate of depreciation at 2½% in the report to stockholders, while claiming a depreciation rate of 20% for tax purposes and showing the resulting tax savings of approximately 85% of the sum involved as accruing directly to earnings. Under these circumstances we feel that the pro-forma common stock earnings of the company are more properly stated at $3,868,000. At the same time, however, it must be realized that in addition to these earnings and depreciation the company derives the following cash inflow deducted directly from the profit and loss account:

Amortization of plant acquisition adjustments (Account 100.5)	$ 693,000
Reduction of federal taxes due to amortization of emergency facilities	610,000
Amortization of debt discount	400,000 (approx.)
Total	$1,703,000

It is also important to state that the company has to restrict $900,000 of earnings per year for five years begin-

Preferred Stockholders' Exhibit No. 26-B (Cont'd)

ning May 1944 in surplus as not available for payment of dividends. This item, however, is in large part counterbalanced by the $610,000 of current tax savings which for this purpose are regarded as a part of net income.

Discussion of past earnings is made rather difficult by corporate developments such as the merger, sale of transportation properties, refinancing and the effect of these developments on taxes. The following table attempts to eliminate the distorting influence of these factors:

Combined Figures

VIRGINIA ELECTRIC & POWER AND VIRGINIA PUBLIC SERVICE

	1944 Pro-forma	1943	1942	1941	1940
		(—000 omitted)			
Net Income as reported		$5,764	$4,647	$5,231	$5,402
Less pfd. dividends at present rate		1,447	1,447	1,447	1,447
Net for Common		4,317	3,200	3,784	3,955
Less difference between present charge of $693,000 for amortization of Account 100.5 and actual charge under this heading in former years		352	693	693	693
		$3,965	$2,507	$3,091	$3,262
Add 20% to 75% of interest savings*		180	239	1,100	1,115
		$4,145	$2,746	$4,191	$4,377
Less $300,000 Transportation Profit		300	300	300	300
Net for Common after all adjustments	$3,868	$3,845	$2,446	$3,891	$4,077

* Interest savings resulting from refunding operations are assumed to have been absorbed by higher taxes to the extent of 80% in 1942 and 1943 and to the extent of 25% in 1940 and 1941.

Reading the adjusted earnings figures in conjunction with the previous table showing the sharp increase of gross revenues, it becomes immediately apparent that the rise in revenues has not directly benefited the earnings applicable

Preferred Stockholders' Exhibit No. 26-B (Cont'd)

to the common stock but has been largely offset by higher taxes.

Capitalization and Plant Account—The pro-forma capital structure and the Plant Accounts of Virginia Electric & Power giving effect to the recent refunding operation are shown below:

Mortgage Bonds—2¾%		$59,000,000	50.4%
Serial Notes 1945-54		11,580,000	9.9%
4.4% Preferred Stock ($100 par)		28,491,000	24.4%
Common Stock		13,546,000	11.6%
Surplus	$7,851,000		
Less Debt Discount	3,620,000	4,231,000	3.7%

	Plant	Reserve (—000 omitted)	Net Plant	Depreciation and Reserve % of Gross Plant
Electric Utility Plant*	$113,832			
Other Utility Plant	9,397			
	$123,229	$17,425	$105,804	14.2%
Plant Acquisition Account	11,237	1,875	9,362	16.7%
	$134,466	$19,300	$115,166	

* Original cost.

The company is amortizing plant acquisition (Account 100.5) over 15 years at the rate of $693,168 per annum out of income. This deduction is regarded as an expense for rate making purposes but not for computing federal income taxes.

While the capitalization ratios are not favorable at present, payment of the serial bonds over a period of nine years is provided for. Moreover, it is interesting to note that by utilizing income at the 1944 pro-forma level, after paying dividends on the common stock (at the 1944 rate of $2,589,000) and by using cash inflow derived from amortization of intangibles, tax savings from depreciation of emergency facilities, and amortization of debt discount for the reduction of debt, the equity could be lifted from 15% to nearly 20% of total capitalization within two years.

Preferred Stockholders' Exhibit No. 26-B (Cont'd)

No trouble has been encountered with state regulatory bodies in over 20 years and thus no capital base for rate making purposes has been established. However, the company has been voluntarily reducing rates over a long period of time and current average residential rates of 3.59¢ per kwh. and a return of 6.6% on capitalization have to be regarded as reasonable.

All factors considered and paying particular attention to the comparison in the appendix, we believe that we are conservative in capitalizing the revised earnings figure of $3,868,000 at 15 times to arrive at a valuation of $57,300,000 for Virginia Electric & Power. In this connection it is important to repeat that these earnings of $3,868,000 do not include deductions of $1,700,000 which are debits to the income account but are not cash expenditure.

Gulf States Utilities. This company is an electric utility and to a much smaller extent a gas, water and ice company, operating in an area of southeastern Texas and south central Louisiana. The area serviced has a population of 550,000 and extends over 27,500 square miles. The largest cities in this territory are Beaumont, Port Arthur and Orange, Texas, and Baton Rouge and Lake Charles, Louisiana. Production and refining of oil is the major industry in this section and approximately 19% of the company's operating revenues are derived from the sale of electricity to the oil industry.

In September 1944, Gulf States refunded $10,000,000 of 5½% and 6% preferred stock with a $12,000,000 4.4% preferred issue.

Earnings—The table below shows the reported earnings of the company for the last six years before and after certain adjustments:

Preferred Stockholders' Exhibit No. 26-B (Cont'd)

	1944	1943	1942	1941	1940	1939
			(—000 omitted)			
Gross Revenues	$17,464	$15,398	$12,572	$11,836	$10,733	$10,369
Depreciation	1,520	1,460	1,602	1,552	1,457	1,411
Maintenance	900	753	n.a.	n.a.	n.a.	n.a.
Federal Income & E. P. Taxes	4,162	3,274	2,005	1,508	681	178
Amortization of Plant Acquisition Account	194	194	.....	.....	.....	.....
Net Operating Revenues	$ 3,403	$ 3,455	$ 3,065	$ 3,245	$ 3,689	$ 4,067
Interest	989	1,021	1,026	1,041	1,076	1,274
Amortiz. of Debt Discount	163	204	204	204	204	159
Net Income as reported	2,235*	2,124*	1,772	2,021	2,426	2,638
Current Preferred Dividend Requirements	528	528	528	528	528	528
Net for Common	1,707	1,596	1,244	1,493	1,898	2,110
Add Adjustments for Debt Discount	163	204	204	204	204	159
	$ 1,870	$ 1,800	$ 1,448	$ 1,697	$ 2,102	$ 2,269
Less Adjust. for Amortiz. of Plant Acquisition Acct. not charged prior to 1943	.....	.....	194	194	194	194
Net for Common, adjusted	$ 1,870	$ 1,800	$ 1,254	$ 1,503	$ 1,908	$ 2,075

* Excluding tax savings of $523,000 in 1944 and $85,000 in 1943 as discussed below.

In connection with the refinancing operation of last September, the debt discount was eliminated and for comparative purposes we thought it advisable to restate earnings for past years eliminating this change. At the same time we adjusted earnings prior to 1943 for the annual deduction of $194,000 for amortization of plant acquisition account, which will continue through 1957. The reported income statements for 1944 and 1943 show a reduction of federal excess profits tax resulting from amortization of defense facilities amounting to $523,000 and $85,000 respectively as a direct credit to income. For the same

Preferred Stockholders' Exhibit No. 26-B (Cont'd)

reasons as outlined under Virginia Electric & Power we do not believe that this is a justifiable accounting treatment and have therefore not considered this item as income.

Distribution of Revenues—Distribution of electric revenues and their growth since 1939 is shown in the table below:

	1944		1939		1944 Increase over 1939
Residential	$ 4,156,000	25.9%	$2,929,000	31.2%	42%
Commercial	3,033,000	18.9%	2,314,000	24.6%	31%
Industrial & Other	8,846,000	55.2%	4,149,000	44.2%	112%
	$16,035,000		$9,392,000		71%

While the growth of electric revenues has been far greater than for the industry as a whole, we see that operating and net income have remained quite stationary, and taxes have risen very sharply preventing higher earnings. The extremely high taxes should be an important consideration in appraising the sharp rise in gross sales, and the heavy concentration on the industrial revenues.

Capitalization and Plant Account—The capitalization ratios of Gulf States correspond almost exactly to 50% for bonds, 25% for preferred stock, and 25% for common stock, which the SEC considers as standard for utility operating companies.

Bonds	$27,300,000	52.4%
Preferred stock	12,000,000	23.0%
Common stock	11,101,000	21.3%
Surplus	1,738,000	3.3%

Plant account and reserves at December 31, 1944:

	Plant	Dep. Reserve	Net Plant	Dep. Reserve % of Gross Plant
Electric Plant*	$56,037,000			
Other Utility Plant	4,357,000			
	$60,394,000	$11,126,000	$49,268,000	18.4%
Plant Acquisition Acct.	3,230,000	711,000	2,519,000	22.0%
	$63,624,000	$11,837,000	$51,787,000	18.6%

* Original cost.

Preferred Stockholders' Exhibit No. 26-B (Cont'd)

Plant acquisition adjustments (Account 100.5) are being amortized over a period of 15 years at the annual rate of $193,810 out of current income. Under these conditions all capitalization ratios and book figures are in line with current demands of the regulatory bodies. No disagreements with the state commission in Louisiana or municipal authorities in Texas have been encounted and the average residential rate of 3.7¢ per kwh. and 6.6% return on capitalization are moderate.

In evaluating Gulf States Utilities we have to weigh the sharp wartime gain in revenues partly offset by the heavy tax burden against the sound capital structure. In capitalizing earnings of $1,870,000, it must be borne in mind that this figure is after sharp downward adjustments and a deduction of over $700,000 in debits to the income account which do not represent cash expenditures. Applying a price-earnings ratio of 14, which results in a valuation of Gulf States Utilities of $26,000,000, is therefore, in our opinion, a conservative appraisal.

El Paso Electric Company of Texas. El Paso Electric is engaged in generating and distributing electric power in El Paso and in an area of Texas extending 100 miles northwest of El Paso to New Mexico. The population of the area served is estimated at 168,000.

In December 1943 the transportation and bridge properties owned by the company were sold. In December 1944 El Paso Electric of Delaware, an intermediate holding company controlling El Paso Electric of Texas, was dissolved since it served no useful purpose. El Paso Electric therefore is now directly owned by Engineers.

At the end of 1944 the company's current assets of $3,902,000 compared with current liabilities of $1,360,000, leaving working capital of $2,542,000. This excessive working capital arose largely from sale of property, and early in 1945 permission was obtained to pay a special dividend of $900,000 to Engineers. It is contemplated to use

Preferred Stockholders' Exhibit No. 26-K (Cont'd)

$600,000 for the installation of new plant capacity thus reducing working capital to $1,000,000.

Capitalization of the company as of December 31, 1944, giving effect to the $900,000 dividend recently paid to Engineers, is shown in the table below:

Debt and Bank Loans	$6,710,000	54.4%
Preferred stock	1,500,000	12.1%
Common and Surplus	4,130,000	33.5%

Earnings during the war period have been quite stable although it should be stated that net profits before 1941 were substantially lower than they are currently. This is indicated in the following table:

	Operating Revenues	Income Taxes	Balance for Fixed Charges	Net for Common
1944	$3,849,000	$829,000	$931,000	$606,000
1943	3,708,000	752,000	814,000	486,000
1942	4,533,000	901,000	769,000	439,000
1941	4,012,000	460,000	965,000	599,000
1940	3,362,000	107,000	966,000	409,000
1939	3,140,000	59,000	900,000	323,000

It should be further noted that the years prior to 1943 include the profit of the railway and bridge subsidiaries which were sold in 1943. The 1943 and 1944 figures are adjusted to reflect this sale. It is not believed that these operations were very profitable prior to the outbreak of the war.

The distribution of the company's sales is well balanced. Rates are very low, averaging only 3.1¢ per kwh. for residential revenues. On the other hand, depreciation and maintenance at 12.5% of gross revenues seem low in relation to provisions of other utility companies and the return of nearly 7% on capital might cause rate troubles in spite of a rate structure which is well below the national average of 3.5¢ per kwh. for residential customers.

Preferred Stockholders' Exhibit No. 26-B (Cont'd)

All factors considered, we are capitalizing last year's earnings of El Paso Electric at 11 times, arriving at a value of $6,600,000 for the property, and add $500,000 for excess working capital which should be utilized at some time in the future to benefit stockholders. We thus value El Paso at $7,100,000, after allowing for the $900,000 distributed to Engineers early this year.

Other Properties

The remaining properties of Engineers Public Service are quite small and scheduled for sale. A conditional sales contract to dispose of the holding of Savannah Electric & Power preferred and common stocks for $3,387,000 has already been signed by Engineers. Similarly, a contract to sell the investment in Missouri Service Co. and North Kansas Power Co. for a consideration of $850,000 after certain adjustments has been submitted to the SEC. The value of Western Public Service is rather arbitrarily assumed to be 10 times the estimated 1945 income of $65,000, or a total of $650,000.

A. S.

This memorandum is based on sources which we believe are reliable but is not guaranteed by us and is not to be considered all inclusive. It is not to be construed as an offer or the solicitation of an offer to sell or buy the securities herein mentioned.

Preferred Stockholders' Exhibit No. 26-B (Cont'd)

Prices as of April 18, 1945

Preferred Stockholders' Exhibit No. 26-B (Cont'd)

† Number of common shares assumed to be 1,910,000 equal to number of shares of Engineers outstanding. Dividends are equal to those distributed by Virginia to Engineers.

(a) 1944 taken from pro-forma figures. Earlier years taken to adjust for pro-forma fixed charges after deducting 80% of interest savings for taxes in 1943 and 1942, and deducting 25% for taxes in 1941 and 1940. Also, deducting $300,000 in all years for loss of traction earnings, and $693,000 for amortization of Account 100.5.

(b) Deducting $693,000 amortization of Acc. 100.5 from operating revenues.

(c) Reduced by $513,000—a tax reduction due to certain non-recurring items charged to surplus.

(d) Increased by $513,000, item (c) above, and $1,267,000 of tax savings on accelerated depreciation of defense facilities.

(e) Excluding contingency reserves.

(f) Reduced by $516,000, a tax reduction due to certain non-recurring items charged to surplus.

(h) 1943 figures.

(i) $15,894,000 of Account 100.5 not being amortized.

(j) Deducting only $100,000 annual minimum amortization of intangibles. Minimum amortization taken out of surplus is $100,000. 90% of net after div. to be used for amortization of account 100.5. Intangibles are $5,965,000. If intangibles were amortized over 15 years instead of a minimum of $100,000 per year, earnings would be cut in half.

(k) Replacing charge for write-down of intangibles actually taken by $800,000,000 to be charged in future.

(l) The charge of $4,504,000 for intangibles regarded as a tax item since it replaced taxes.

(m) Pro-forma figures on income for all years.

(n) Applying 1944 fixed charges to prior year after deducting 80% of savings in 1942 and 1943, and 25% in 1940 and 1941 as tax increases.

(o) The company now writes off $563,232 amortization of intangibles to surplus. The figures here deduct this figure from income.

(p) Number of common assumed at 1,000,000 shares. Dividends equal to those distributed by Gulf States to Engineers.

(r) Deducting $610,000 tax savings from amortization of defense facilities from income and adding it to taxes.

(s) Adding $204,000 of debt discount for all years and $163,000 for 1944 since debt discount is now written off. Deducting $193,000 for amortization of account 100.5 for 1942 and prior years, and deducting tax savings from amortization of defense facilities 1943 and 1944.

(t) Deducting $216,000 amortization of intangibles charged to depreciation by company since 1943.

(u) After deducting tax savings due to 1940 refunding, and also deducting $216,000 amortization of account 100.5 commenced in 1943.

DUFF AND PHELPS

Date July 5, 1945.

Bulletin ENGINEERS PUBLIC SERVICE COMPANY

Refer to
Cross Reference

In view of the excellent progress made by Engineers Public Service Company in the sale or liquidation of a number of its subsidiary companies and the improvement in markets for utility operating company common stocks, a brief reappraisal of this holding company situation appears advisable at this time.

With respect to divestment orders and the disposition of properties, more recent transactions have been as follows:

1—Liquidation of El Paso Electric Company (Delaware) on December 16, 1944, thus bringing El Paso Electric Company's (Texas) common stock directly up to Engineers. A cash contribution of $1,000,000 by Engineers to the Delaware Company enabled that company to pay off its preferred stock.

2—Sales by Virginia Electric and Power Company of all its transportation properties, including the capital stock of Citizens Rapid Transit Corporation. These properties were sold in various pieces and transfer to the purchaser of the final property was completed on March 31, 1945.

3—Sale by Engineers of all securities which it owned of Savannah Electric and Power Company for a cash consideration of $3,387,500, transfer of the securities having been made on April 25, 1945.

4—On March 5, 1945, Engineers entered into a contract for the sale of its entire interest in Mis-

Preferred Stockholders' Exhibit No. 26-C (Cont'd)

souri Service Company and Northern Kansas Power Company for a base price of $750,000, subject to adjustment, with the total consideration not to exceed $850,000. S. E. C. approval of this transaction was obtained on June 4.

As the situation now stands, Engineers has liquidated its investments to the point where it owns only four companies, namely, Virginia Electric and Power Company, Gulf States Utilities Company, El Paso Electric Company (Texas) and The Western Public Service Company. In the case of Virginia, there is a very small minority interest, and in addition to Western's common stock, Engineers also owns practically all of its outstanding debt.

On numerous occasions in the past we have reviewed the status of Engineers with respect to the Holding Company Act, and a detailed discussion here would prove of no useful purpose. In brief, the S. E. C. in 1942 ordered Engineers to divest itself of all its investments, with the exception of that in Virginia Electric and Power Company, which, if retained, was to dispose of its gas and transportation operations. On appeal to the Court of Appeals, Engineers obtained a reversal of this order, and the Court opinion remanding the case to the S. E. C. for further proceedings was covered in detail in our bulletin of December 3, 1943. Grounds for reversal, in our opinion, were largely technical in nature and did not warrant the conclusion that Engineers could ultimately retain more than one single integrated system. In substance, the Court found that the Company was entitled to more time to determine whether Virginia or Gulf States should be retained and that the Commission's interpretation of the act relating to the divestment of the transportation and other incidental businesses was incorrect. Both Engineers and the S. E. C. have applied to the Supreme Court for a review of the lower Court's opinion and the case will be heard on October 8, 1945.

Preferred Stockholders' Exhibit No. 26-C (Cont'd)

Despite the existence of the litigation, Engineers, as noted, has moved along in the liquidation of its investments, including sale of the transportation properties of Virginia, and the most recent announcement of the Company relating to possible further disposition is contained in its 1944 Annual Report. Because the possible plan does indicate the present thought of the management, we are reproducing it here in full.

> "If the outcome of the present litigation involving Section 11(b)(1) shall make it necessary or desirable to do so, it is hoped that it will be possible to develop a plan under Section 11(2) which will meet with the approval of the SEC under which Engineers' interest in Gulf States Utilities Company and El Paso Electric Company (Texas) would be distributed to its security holders through liquidating holding companies, the preferred stocks of which would be distributed to the preferred stockholders of Engineers and the common stocks of which would be distributed to the common stockholders of Engineers. The net income of such liquidating holding companies would be used exclusively for payment of preferred dividends and retirement of their preferred stock at $100 per share and accrued dividends. Any remaining smaller properties not sold, if the plan is allowed to become effective, would be disposed of when sales could be made on an advantageous basis and the proceeds therefrom would be devoted to the retirement of the preferred stock of the liquidating holding companies. When the preferred stocks of such holding companies had been entirely retired, the common stock of their subsidiaries would be distributed pro rata in liquidation to their common stockholders. Upon establishment of such liquidating holding companies the mutual service company, located in New York, would be dissolved. Engineers, as the parent of Virginia Electric and Power Com-

Preferred Stockholders' Exhibit No. 26-C (Cont'd)

pany alone, would also proceed to liquidate in the same manner as proposed for the liquidating holding companies over Gulf States Utilities Company and El Paso Electric Company when the tax advantages of retaining such relationship were deemed no longer of present or prospective value."

It seems to us that if the above plan is proposed, it stands but little chance of meeting approval of the S. E. C. without modification. Common stockholders, of course, would be required to forego all hope of dividends until full liquidation of the preferred stocks was accomplished, a condition which we do not believe to be entirely warranted. A more realistic approach to the problem of liquidation, in our opinion, would be along the lines that both Gulf States and El Paso either be sold or distributed on an exchange offer to the preferred stocks of Engineers, and that Virginia Electric be retained or merged into the parent company so that the tax advantage of consolidated tax returns would be preserved, if such is possible. In any event, it seems to us that Engineers ultimately is heading for complete liquidation, although the steps looking in that direction are likely to be rather slow in developing.

Turning next to the question of possible values for the remaining assets of Engineers, each of these will be commented upon separately.

Virginia Electric and Power Company: The merger of Virginia Public Service into Virginia Electric now makes this subsidiary the most important investment still retained by Engineers. However, reported earnings of Virginia are of little value in an attempt to arrive at a possible market value for the common stock, as current statements do not as yet include a full year's operation of the merged Virginia Public Service properties and as the transportation properties were only recently sold. In connection with the recent sale of Virginia's First Mortgage 2¾'s, a pro forma statement for 1944 was included in the registration

Preferred Stockholders' Exhibit No. 26-C (Cont'd)

statement, and such earnings appear to us to be the most appropriate for an appraisal of the Company's common stock. The pro forma statement gives effect to the Virginia Public Service merger as of January 1, 1944, and to the sale of the transportation properties and complete refinancing of the outstanding mortgage debt. On this basis, common stock earnings were reported at $5,171,000 before amortization of acquisition adjustments and $4,478,000 after the amortization charge. However, such earnings include tax savings of about $610,000 resulting from amortization of emergency facilities constructed under necessity certificates and tax savings resulting from consolidation with Engineers for tax purposes.

Had charges in lieu of taxes included the accelerated amortization tax savings, common stock earnings would have amounted to $4,561,000 before the 100.5 amortization charge and $3,868,000 after such charge.

It seems to us that while the pro forma statement does include as earnings available for the support of capitalization the tax savings resulting from accelerated amortization, the additional earning power cannot be considered in the same light as normal earning power. We readily appreciate that a number of companies do carry such tax savings directly into net income, but, on the other hand, many other companies prefer to treat the item more or less as a charge in lieu of taxes or a reservation of net income. All subsidiaries remaining in the Engineers' system segregate the tax saving item in current statements by including the full tax liability in operating expenses and adding back an amount equal to the tax savings to net income available for preferred and common dividends. We have covered this question in several of our recent bulletins and it is perhaps sufficient to note here that we doubt very much if Virginia Electric would be pursuing a conservative policy by paying as common stock dividends the amount of the tax savings.

Preferred Stockholders' Exhibit No. 26-C (Cont'd)

With respect to tax benefits from consolidation with Engineers and other system companies, no information is published which would indicate the amount involved. However, we do believe that the consolidation benefit represented a fairly substantial item in 1944, and as an estimate we would place the amount at $300,000 to $400,000, with the lower figure possibly nearer the exact amount. Engineers, of course, intends to preserve this benefit as long as possible, but in this connection, certain important factors enter into the picture. Liquidation of El Paso of Delaware at the end of 1944 now necessitates consolidation of El Paso Electric of Texas, as that company's preferred stocks have no regular voting power, whereas the Delaware Company's preferred stock did vote. As a result, Engineers' tax umbrella must cover El Paso of Texas as well as Virginia Electric and Western Public Service. The new $4.40 stock of Gulf States has regular voting power and cannot be consolidated.

As Engineers sells off its properties, its tax base likewise declines, and we do not believe that future tax savings from consolidation will be anywhere near as important as they have been in the past. Our general impression is that the tax benefits to Virginia in 1945 will probably not be much, if any, above $100,000.

It may be well to raise the further question at this point relative to the consolidation benefits which Virginia Electric might derive in the event El Paso and Gulf States are cut loose from the system. As the situation now stands, we do not believe that Engineers will be in a position to provide much benefit to Virginia Electric, and we would not be surprised if the dollar amount were below $100,000 annually. If our views are at all correct, holding company expenses and taxes would probably be greater than the consolidation benefits, thus providing a strong incentive for the liquidation of Engineers. However, this is an involved question and other factors may be more important than the tax angle alone.

Preferred Stockholders' Exhibit No. 26-C (Cont'd)

It is obvious that even assuming no tax benefits from consolidation, and also that Virginia Electric's management would prefer to pursue a conservative dividend policy, the company would still be in a position to pay common stock dividends of $3,000,000 and possibly $3,500,000 annually. On this basis, and considering the excellent name of the Company, we believe that the market would appraise the common stock at an aggregate value of around $70,000,000. Such an amount would be substantially in excess of the stated value of Virginia's common stock and surplus, but in today's market dividend-paying ability and earnings are of far greater importance than what might be considered sound asset support or book values.

Based on the reported pro forma earnings, Virginia appears to be earning a comparatively high rate of return and this, together with the fact that mortgage debt is now down to a 2¾% basis and the preferred stock to 5%, provides an extreme leverage position for the common stock. It might be argued that Virginia's rates are higher than warranted, and further, that termination of the war will result in a sharp contraction of activity in the Newport News and Norfolk areas, thus having an effect on earnings. In this connection, however, there is a comparatively large excess profits tax cushion and the postwar outlook for a large part of the service area appears to be excellent.

For the purpose of this report, we believe that a figure of $70,000,000 would be entirely conservative as representing a market appraisal of Virginia's common stock on the assumption that the stock was outstanding in the hands of the public, and this is the figure we shall use.

Gulf States Utilities Company: For the twelve months ended April 30, 1945, Gulf States reported net income available for common stock at $2,624,000 before a charge of $194,000 for amortization of plant acquisition adjustments and $2,430,000 after such charge. However, such earnings include tax benefits to the extent of $530,000 re-

Preferred Stockholders' Exhibit No. 26-C (Cont'd)

sulting from accelerated amortization of war plant facilities. Based on the assumption that this amount would not be paid out in dividends, the balance available for common stock would amount to $2,094,000 before the 100.5 amortization charge and $1,900,000 after such charge. Common stock dividends in 1944 amounted to $1,190,000, which compares with $1,120,000 in each of 1943 and 1941 and $840,000 in 1942. However, the Company has been paying off bank notes at a comparatively rapid rate and as of April 30, 1945, all such debt had been liquidated, with the result that common dividends could probably be increased to a point more in line with reported earnings.

The effect of the war effort on business activity in a large part of the area served by the Company has been very substantial, as evidenced by the fact that revenues currently are more than 50% greater than the 1941 level. It would only be logical to expect a reduction in the Company's load following the end of the war, but, on the other hand, many new industries have moved to the Gulf Coast area, and it is entirely likely the Company's load will not recede to prewar levels. Excess profits taxes are comparatively large and provide an excellent cushion for any decline in earnings in the postwar period.

If it is assumed that the Company will pay a common dividend of $1,500,000 annually, we have no hesitation in believing that the present market would appraise the common stock at an aggregate value of about $30,000,000. We appreciate that this is substantially in excess of Gulf States' stated value of common stock and surplus. However, in view of the type of regulation in Texas and Louisiana, the Company probably will continue to report satisfactory earnings. For the purpose of this report, therefore, we believe that the $30,000,000 valuation is entirely appropriate.

El Paso Electric Company (Texas): For the twelve months ended April 30, 1945, El Paso Electric Company reported a balance available for common stock equal to

Preferred Stockholders' Exhibit No. 26-C (Cont'd)

$625,000. Apparently the Company obtains no tax benefit from accelerated amortization of war plant facilities, and as the plant account contains no acquisition adjustment account, there is no charge in the income account for 100.5 amortization. Beginning in 1945, the Company will consolidate with Engineers and other system companies for tax purposes, and therefore the foregoing earnings include such benefit for only four months. On a pro forma basis, however, we do not believe that the 1945 amount will be of great importance, perhaps amounting to no more than $75,000. Over a period of years the Company's common stock dividends were gradually increased to the point where $450,000 was paid in 1943. In 1944, however, the dividend was reduced to $93,750, probably occasioned by the need for building up surplus, as this account was reduced $695,000 in 1943 by a special appropriation to the depreciation reserve.

Considering the existence of a comparatively large excess profits tax accrual which will cushion any decline in the scale of operations in the postwar period, and also the existence of a deposit with the mortgage bond Trustee of about $1,000,000, which came from the sale of properties and evidently is available for postwar construction, we believe that the Company could very readily pay an annual dividend of $450,000, and possibly even increase this to $500,000 without difficulty. In view of this, we believe that a realistic present-day market value would be about $9,000,000, and this is the figure we will use for the purpose of this report.

The Western Public Service Company: This Company is so small as to have little importance in the over-all picture. It renders electric service in and near Laramie, Wyoming, serving an estimated population of only 12,500. One difficulty of appraising this situation results from the fact that effective October 17, 1944, Monolith Portland Midwest Company, one of the Company's old customers which

accounted for approximately one-half the total load, discontinued the Company's service and became a customer of the Reclamation Bureau. Engineers owns all of the common stock, stated at $600,000, and a 5% note in the amount of $508,800 at December 31, 1944. No important error will be introduced by assuming that this Company has a value of $1,000,000, and this is the figure we shall use for this report.

Net Working Capital of Engineers Public Service Company: Engineers' balance sheet as of April 30, 1945, showed current assets of about $11,080,000, including $10,476,000 of cash and U. S. Treasury securities. All sales transactions, with the exception of Missouri Service and Northern Kansas Power, were completed prior to April 30, 1945, and the only adjustment necessary is the addition of about $850,000, which is to be received from the sale of these two small properties. Current liabilities were reported at about $811,000, thus leaving the Company with a net working capital position of about $11,120,000.

Summary of Values: A summary of the foregoing estimated values is as follows:

Virginia Electric and Power Co.	$ 70,000,000
Gulf States Utilities Co.	30,000,000
El Paso Electric Co. (Texas)	9,000,000
Western Public Service Co.	1,000,000
Net current assets	11,120,000
Total	$121,000,000

At this point it is necessary to give some consideration to possible underwriting discounts which might be sustained if Gulf States and El Paso were to be sold rather than distributed. Currently, Engineers' three issues of preferred stocks are outstanding in the aggregate amount of $39,246,000, of which about $11,000,000, is covered by present net current assets. Only sufficient securities would need to be sold to satisfy the net balance, and our usual 10% dis-

Preferred Stockholders' Exhibit No. 26-C (Cont'd)

count would be approximately $3,000,000, which, if deducted from our total estimated value, would leave a balance of $118,120,000. Deduction of the par value of the preferred stock from this latter amount would leave a balance of $78,874,000. In terms of Engineers' 1,909,968 shares of outstanding common stock, this remaining estimated value is equivalent to about $41.30 per share. If it is assumed that the preferred stocks will eventually obtain their call prices rather than par, a total premium of about $3,205,000 is involved, and if this amount is deducted from the $78,874,000 estimated balance of value remaining for the common stock, a figure of about $75,669,000 would result, equivalent to about $39.60 per common share. Whether or not the preferred stocks will be liquidated at par, as now envisioned by the management, is a question which we do not believe may be answered in any satisfactory maner at the present time, but in order to be conservative, it is probably well to give some consideration to this possibility.

It is quite obvious that our estimated aggregate value for the assets of Engineers is substantially in excess of the value placed thereon by the present market of about $26 per share for Engineers' common stock. We feel, however, that steps looking in the direction of ultimate complete liquidation are likely to be rather slow in developing, and for this reason, some compensation in the form of a discount would probably be required in a very high leverage, non-dividend paying issue, such as this is. Nevertheless, the stock does look quite attractive in the strong market which currently prevails, and for those who prefer to forego current income for appreciation possibilities, the stock has advantages. It must be remembered that current reported earnings of the system are around $3 per common share, and if for no other reason, the stock should have some further appreciation possibilities approximately equal to the retained future earnings. The common occupies a high leverage position, however, and could decline quite sharply in a weak general market.

GPV:C

Preferred Stockholders' Exhibit No. 26-D.

Report on Engineers by Securities Supervisors, dated August 8, 1945.

ENGINEERS PUBLIC SERVICE COMPANY

Capitalization

	Outstanding May 31, 1945
$5 Cumulative Preferred	143,951 Shares
$5.50 Cumulative Preferred	183,406 Shares
$6 Cumulative Preferred	65,098 Shares
Common Stock	1,909,968 Shares

This is a simple capital structure—no funded debt and only preferred and common stock. No dividends are being paid on the common but the preferred has a good record. The preferred stocks paid dividends regularly from date of issue to July 1938, then no payments were made until August 1936, but by January 1938 all arrears had been paid and regular payments have been made since then. In voluntary liquidation or by call the $5 stock is entitled to 105, and the $5.50 and $6 stock to 110; all series are entitled to 100 and accrued dividends in involuntary liquidation; they rank equally as to security.

System

Engineers Public Service Company is a registered public utility holding company. It has appealed certain decisions of the Securities and Exchange Commission and these are yet to be decided by the Supreme Court. However, Engineers has been disposing of smaller subsidiaries, and refunding the debt and adjusting the capital structure of its larger subsidiaries that it wishes to retain. At present its most important assets are the common stocks of—

Virginia Electric & Power Company
Gulf States Utilities Company
El Paso Electric Company (Texas)

Preferred Stockholders' Exhibit No. 26-D (Cont'd)

In addition, Engineers owns the stock and most of the debt of Western Public Service Company. In 1945 Engineers has sold Savannah Electric & Power, Missouri Service and Northern Kansas Power. Virginia Electric & Power Company has sold its transportation properties.

If the Securities & Exchange Commission is sustained by the Supreme Court, Engineers can retain only Virginia as an integrated system and Virginia then must dispose of its gas properties.

Earnings

The historical earnings record has little value because of the sale in recent years of subsidiary properties. Also during 1944 Virginia Electric & Power acquired Virginia Public Service and then recently sold its transportation properties. In 1944 consolidated system earnings applicable to Engineers common stock were $4,776,464, equivalent to $2.50 per share. For the 12 months ended May 31, 1945 such earnings were $3.21 per share; this included $0.70 per share due to saving in Federal income tax from the amortization of emergency facilities.

Value of Subsidiaries

Virginia Electric & Power is the most important subsidiary. In connection with its recent sale of first mortgage 2¾% bonds it presented a pro forma earnings statement for 1944 including Virginia Public earnings from January 1, 1944 and eliminating the transportation properties. On this basis common stock earnings were reported at $5,171,000 before amortization of acquisition adjustments. This also included about $610,000 tax savings resulting from amortization of emergency facilities. Such earning power should permit of common stock dividends of $3,000,000 to $3,500,000 annually. Under present market conditions the common stock of a utility operating company with such earnings and dividend paying ability should be worth about $70,000,000.

Preferred Stockholders' Exhibit No. 26-D (Cont'd)

Gulf States Utilities for the 12 months ended May 31, 1945 reported net income available for common stock at $2,673,000 before amortization of acquisition adjustments. This also included about $532,000 tax savings resulting from amortization of emergency facilities. Common stock dividends were $1,190,000 in 1944 and $1,120,000 in 1943. However, the company has been paying off bank notes and these were all paid by May 31, 1945 so that future dividends could be materially higher. In the expectation of dividends of $1,500,000 we believe the common stock would have a present value of about $30,000,000.

El Paso Electric Company (Texas) for the 12 months ended May 31, 1945 reported net income available for common stock at $625,000 and there was no amortization of acquisition adjustments or emergency facilities. Dividends were gradually increased until in 1943 $450,000 was paid. However, in 1944 only $93,750 was paid probably due to the need of building up surplus for accounting adjustments. $450,000 would seem to be a reasonable estimate of future dividend paying ability and on that basis we believe the common stock would have a present value of about $9,000,000.

Western Public Service is relatively small. Engineers owns its stock and a note for $508,800. An estimated value of $1,000,000 for this company should not be much out of line.

Other Assets. Engineers Public Service (parent company) as of May 31, 1945 reported current assets of $11,580,321, including $10,520,000 of cash and U. S. Treasury securities. Current Liabilities were $839,004, thus showing Net Current Assets of $10,741,317. North Kansas Power and Missouri Service were carried as other investments at the sale price of $844,119.

Preferred Stockholders' Exhibit No. 26-D (Cont'd)

Recapitulation of Estimated Values:

Virginia Electric & Power	$ 70,000,000
Gulf States Utilities	30,000,000
El Paso Electric	9,000,000
Western Public Service	1,000,000
No. Kansas-Mo. Service	844,119
Net Current Assets	10,741,317
	$121,585,436

Preferred stocks are outstanding in the amount of $39,245,500 at their claim for 100 in involuntary liquidation but at call price their claim is $42,450,000. Deducting this latter amount would leave $79,135,000 estimated value for the common stock or equivalent to $41.43 per share. These figures are an estimate based on the present market for utility equities and in the future may be higher or lower. Holding company stocks may be expected to sell for less than the value of their subsidiary equities but the discount should narrow as progress is made in liquidation and integration to conform to the Holding Company Act.

Liquidation and Integration

Engineers has just about completed the liquidation of its smaller subsidiaries. Western Public Service alone remains to be sold. The matter of integration is still to be determined. If Engineers should win its case before the Supreme Court it could continue as a holding company owning its present three principal subsidiaries.

If the Securities & Exchange Commission is sustained by the Supreme Court, Engineers can retain only one subsidiary and it might eventually merge with that one. It may have a choice as to which one it will retain but Virginia would seem to be the logical choice. The other subsidiaries plus parent company net current assets have an estimated present value more than sufficient to pay off the preferred stock. Engineers common stock would then have Virginia

Preferred Stockholders' Exhibit No. 26-D (Cont'd)

common with some added value from current assets not required to pay off the preferred.

In the 1944 annual report Engineers outlined a different plan that it would propose if it lost the case before the Supreme Court. It would create two new liquidating holding companies for Gulf States and El Paso and would distribute the preferred stocks of such new companies to Engineers preferred stock and the common stock of the new companies to Engineers common. The net income of the new holding companies would be used entirely to pay preferred dividends and retire preferred. When the preferred stocks were paid off the operating company common stocks would be distributed pro rata to the new liquidating holding company common stockholders. Engineers would continue as the parent of Virginia and liquidate in the same manner as the new holding companies.

Under this plan no dividends could be paid to the common stock until the preferred was retired out of the income of the three subsidiaries. We doubt if this proposal involving two new holding companies would be approved by the Securities and Exchange Commission. In our opinion it would be more favorable to Engineers common to retire the preferred by the sale or distribution of assets and thus complete integration and place the common in a position to receive dividends at an earlier date.

Conclusion

Engineers Public Service Preferred stocks are well covered by assets and earnings. Continuity of dividends is to be expected and ultimate liquidation may be at 100 or at call price.

Engineers Public Service Common stock is a leverage speculation. Its price swings can be large with changes in the general market for utility equities. No early dividends should be expected.

At current market Engineers common is selling substantially below our estimate of the present value of the

Preferred Stockholders' Exhibit No. 26-D (Cont'd)

subsidiary stocks. In our opinion its principal subsidiaries are reasonably capitalized and their equities are of good quality.

The time required to complete liquidation and integration under the Holding Company Act is uncertain, but the Supreme Court may have a quorum for hearings this year. A detailed plan of integration can be developed after the Supreme Court decision. Such plan must be approved by the Securities and Exchange Commission as fair to both the preferred and common stockholders. The simple capitalization of Engineers makes it easier to develop a plan when the legal requirements are determined.

Preferred Stockholders' Exhibit No. 26-E.

SCHWABACHER & CO.
INVESTMENT SECURITIES

Suggested Purchase

Engineers Public Service $5.50 Cumulative Preferred
(No Par)

Call Price: 110

Engineers is a public utility holding company whose principal subsidiaries are the sound and well managed operating companies, Virginia Electric Power, Gulf States Utilities and El Paso Electric. These individual properties are, however, scattered geographically so that the company is faced with the necessity of simplifying its structure under the Holding Company Act.

Under a new plan recently proposed by the company to comply with the simplification order, Engineers will offer its own common stockholders rights to buy Gulf States Utilities common and will distribute the stock of El Paso Electric, retaining only Virginia Electric Power. The money received from the sale of Gulf States Utilities will be used to retire Engineer's entire outstanding preferred stock (consisting of three equally ranking series) at par. The company has, however, an action pending before the Supreme Court, in which it is attacking the validity of Section II of the Public Utility Holding Company Act and it is therefore not expected to act on the simplification plan before a decision has been rendered in that case, which could hardly happen before January or February of next year. In case of a favorable decision presumably the simplification plan would be abandoned. While this appears rather unlikely, it would be a very favorable development from the preferred stockholder's standpoint, since it would eliminate the possibility of retirement of the shares at par.

Preferred Stockholders' Exhibit No. 26-E. (Cont'd)

It is possible that preferred stockholders will ultimately receive the call price rather than par for their stock, even if the company is compelled to proceed with its simplification. On November 1, 1945, the SEC issued its "Findings and Opinion" in the American Power & Light case, where it required that company to pay off its debentures at the call price, rather than at par. Engineers Public Service's investment holdings and balance sheet position show a striking similarity to that of American Power & Light. We understand that certain preferred stockholders are planning to undertake legal action to compel payment of the call price. In view of this, it is quite possible that the plan will eventually be changed to the extent of providing for retirement of the preferred issues at their call prices.

Earnings on a consolidated basis have been holding up well. For the twelve months through September 30, 1945, total operating revenues amounted to $68,147,289, which were 1.12% above those for the same period a year ago. Net income on a combined basis on all series of preferred stocks outstanding was $21.29 a share, an improvement of 31.18% over the same twelve month period a year earlier.

The preferred stocks appear to be sound investment issues affording an exceptionally attractive yield, quality considered, at present prices. The $5.50 preferred is selling considerably below the call price of $110, so that the risk of loss is small in the event of retirement at par. If the stock should be called at $110, or if the simplification plan should be abandoned, the stock should prove a very satisfactory investment. On this basis purchase is recommended.

This information has been prepared for the use of our own organization and correspondent firms. New York Research Bulletin

Vol. X, No. 1

December 3, 1945

Subject: ENGINEERS PUBLIC SERVICE COMMON

Time and Again Since Mid-1943 We Have Estimated the Liquidating Value of This Stock and In Each Instance the Figures Showed Measurable Increase *So It Is This Time—Indicated Value Is Now $52 Per Share, Which Compares With a Current Market Price of 35½.*

Engineers Public Service Co. is one of four holding companies directly concerned with the outcome of the "death sentence" hearings that are now underway before the Supreme Court. Notwithstanding this action, however, the company is going right ahead with integration plans and now proposes to offer Gulf States Utilities common stock to its own common stockholders share for share at $11.50 per share, after reclassifying the present 280,000 shares of Gulf States Utilities into 1,909,968 no par shares. The proceeds, together with treasury cash and bank borrowings of approximately $3,000,000 at 1½% interest, would be used to pay off the 392,455 shares of Engineers Public Service preferred stock at 100, the call price in involuntary liquidation.

Another step in the proposed plan provides for reclassification of the present 150,000 common shares of El Paso Electric common stock into 381,994 shares of new stock which would be distributed as a dividend in partial liquidation on the basis of one share of El Paso for each five shares of Engineers common.

Preferred Stockholders' Exhibit No. 26-F (Cont'd)

Finally, Western Public Service would be sold, leaving only Virginia Electric & Power to be merged with Engineers Public Service.

The computation hereunder is our estimate of liquidating value for Engineers Public Service common stock as of here and now:

	*Net Available For Common		Lower Estimate		Higher Estimate
El Paso Electric	$ 577,000	(x13)	$ 7,501,000	(x15)	$ 8,655,000
Gulf States Utilities	2,957,000	(x14)	41,398,000	(x16)	47,312,000
Virginia Electric & Power	5,201,000	(x15)	78,015,000	(x17)	88,417,000
Working Capital (adjusted for property sales in 1945)			12,042,000		12,042,000
Total			$138,956,000		$156,426,000
Less Preferred Stocks at 100			39,245,000		39,245,000
Balance Available for Engineers Common			$ 99,711,000		$117,181,000
Equal to Per Share			$52.20		$61.35

* 12 months ended September 30, 1945.

Consolidated earnings of Engineers Public Service for the 12 months ended September 30, 1945 were equal to $3.27 per common share. Tax savings in 1946 should lift the earnings level to at least $3.50 per share. Such earnings should command a market price appraisal of 15 times or $52.50 per share.

The stock has a two-way appeal. Considered in the light of either liquidating value or earning power the appreciation possibilities are crystal-clear.

John C. Feely

Preferred Stockholders' Exhibit No. 26-G.

DUFF AND PHELPS

Date January 16, 1946

Bulletin *Engineers Public Service Company*
Refer To
Cross Reference

The last Bulletin analyzing the possible break-up value of this system, and discussing developments up to that date, was written July 5, 1945, in the light of market conditions existing at that time and was predicated upon earnings statements for periods several months prior thereto. Since that time further sharp advances in Common Stock prices of good operating utility companies generally have occurred, and yields on such stocks have declined due to the pressure of investment funds as well as hopes, perhaps, of increases in dividend distributions in some cases. Western Public Service Company has been sold.

In the case of the Engineers system, reported earnings of Gulf States Utilities Company and Virginia Electric & Power Company available for Common Stocks have shown some increase through September 1945, and although earnings of El Paso Electric have declined slightly, most of the difference is accounted for by an increase in the Excess Profits Tax accrual so that the protective cushion of such taxes is wider even than before. Considered as a whole, however, the changes which have occurred in reported earnings for the operating company Common Stocks in this system are generally too small to be of great significance, and it becomes more a problem of estimating a reasonable price at which existing earning power would sell in the present higher market than of taking into consideration refinements which would be introduced by a repetitious analysis of the operating companies themselves. For such basic comments, reference is made to our Bulletin of July 5, mentioned above.

Preferred Stockholders' Exhibit No. 26-G (Cont'd)

Our present appraisal of the prices at which the Common Stocks of the three principal operating companies now remaining in the Engineers system might be expected to sell in the present market, are as follows. We again stress the point that these figures have no relation to underlying sound property or other asset values of these stocks, as the leverage factor is considerable in all cases and very large in the case of Virginia.

Virginia Electric & Power		$ 80,000,000
Gulf States Utilities Company		35,000,000
El Paso Electric Company		10,000,000
Western Public Service (Sold for est.)		1,500,000
Parent Net Working Capital 12/31/45 (est.)		13,000,000
Total		139,500,000
Less preferred stock 392,455 shares	$39,245,500	
Call Premiums	3,204,795	
Say		42,450,000
Balance for Common		$ 97,050,000
Equals per share on 1,909,968 shares		$50.75

It will be noted that our estimate of total value is now more than $18,000,000, or approximately 15% higher than the estimate arrived at last July, although the precentage variation is somewhat different for the different equities involved. The reason for this is that we have again carefully gone over the current earnings reports, balance sheets, and other available information, and have given consideration to other factors such as Excess Profits Tax cushion, which is very large in all cases, non-recurring tax savings, and other miscellaneous deductions, and have given considerable thought to postwar territorial prospects as they may be reflected in the income accounts of these Companies. In other words, we do not believe that an arbitrary application of a percentage figure representing general market advances is a proper analytical approach to the problem. Neither do

Preferred Stockholders' Exhibit No. 26-G (Cont'd)

we believe it necessary to explain in detail some of the processes by which we arrived at the above more or less rough estimate of present day value. Errors in individual figures might tend to offset each other.

It will be noted that instead of deducting the Preferred Stock at its liquidating value of $100 per share, we have made additional provision for payment of the call prices. The question as to whether these call prices will or will not be paid is now before the S.E.C. in the over-all plan for liquidation of the system, and ultimately will be decided. Our present feeling is that considering the individual circumstances of this case, and the undeniably strong position of the issue, the Commission is likely to require the premiums to be paid.

On the other side, in our July Bulletin we made a deduction of approximately $3,000,000 to represent the normal discounts on prospective sales of securities sufficient to provide the cash necessary to effect retirement of the Preferreds. Since that time Engineers has indicated its intention of raising these funds in part by borrowing, and in part through sale under rights to its old Common Stock holders of the Gulf State Utilities Company Common, thus eliminating any underwriting costs. The net results of these two adjustments is reflected above in our present estimate of approximately $50.75 per share as a liquidating value of the Engineers Common under present market conditions. Considering the extremely strong markets of the last few days and the relatively high prices at which recent utility Common Stock offerings have been made, particularly where competitive bidding conditions existed, we are not at all certain that the above figure is sufficiently optimistic. However, we continue to prefer to estimate on the conservative side in situations of this type, particularly where the estimate is considerably above present market on the stock involved. Incidentally, it will be observed that if the S.E.C. should not require call premiums to be paid on the Preferred Stock, the amount saved would be equivalent to approximately $1.68 per share on the Common Stock.

Preferred Stockholders' Exhibit No. 26-G (Cont'd)

Engineers Common closed at a price of $36.50 per share on the New York Stock Exchange on January 15. The difference between that market and our estimate of recovery value is approximately $14.25 per share, equivalent to 39% on the present market value. Such a potential percentage increase is exceptionally high in the present market, and is scarcely equalled by most of the Preferred and sound Common Stock situations which we recommend and follow closely. This is true even among the non-dividend paying issues which Engineers is likely to continue to be until final liquidation.

From the standpoint of timing, it might be pointed out that the proposed liquidation plan is contingent upon the Supreme Court's decision in the case regarding constitutionality of the Holding Company Act. This decision is expected perhaps sometime this month, and presumably, if the Act is upheld, Engineers will proceed to sell its Gulf States Common to its own stockholders under rights, which rights would not only have value, but which would produce the funds necessary to liquidate the Preferred Stock and leave the Company free to distribute its remaining assets, consisting of El Paso and Virginia Electric Common Stocks. Thus, the timing in liquidation could be quite favorable in comparison with a number of complicated cases where litigation is involved over treatment of various classes of senior securities.

There is no assurance, of course, that Engineers will distribute its Virginia Electric holdings, as it theoretically could continue to hold that system as its single integrated system under the Act, but now that Excess Profits Tax laws have been repealed, and the benefits of a consolidated tax return are of minor consequence to Virginia, it is quite conceivable that Engineers itself might dissolve and that distribution of all the assets might be made. Even if Virginia should be retained there would be no good reason for Engineers not to inaugurate and continue the payment of Common dividends, which of itself would undoubtedly justify some increase in market price.

Preferred Exhibit No. 26-H (Cont'd)

The thing that impresses us most favorably about the prospective timing of realization of underlying values in this situation is its relative simplicity and the absence of controversial issues of consequence sufficient to tie the situation in litigation.

Preferred Stockholders Exhibit No. 26-H.

BEAR, STEARNS & CO.
ONE WALL STREET, NEW YORK 5, N. Y.

ENGINEERS PUBLIC SERVICE COMPANY COMMON STOCK
PROBABLE VALUE AS AN INTEGRATED SYSTEM
PRELIMINARY REPORT

Present Status of the System:

Engineers Public Service Company is generally regarded as one of the soundest and most ably managed of the public utility holding company systems. Since February 28, 1940 the Company has been under order of the Securities and Exchange Commission to simplify and integrate in compliance with the standards of the Holding Company Act. The System originally owned a number of widely scattered properties, many of which have already been sold. Furthermore, the Company is now under contract to sell its interests in Savannah Electric & Power, Missouri Service and Northern Kansas Power Companies and, as a consequence, will presently own only three important subsidiaries, namely, Virginia Electric & Power, Gulf States Utilities and El Paso Electric Companies.

The Commission has issued further orders directing the Company to divest itself of all its remaining investments with the exception of Virginia Electric & Power Company which, if retained, must dispose of its gas and transportation properties. An appeal from this order is

Preferred Exhibit No. 26-H (Cont'd)

pending before the Supreme Court. In the meantime, Virginia Electric & Power Company recently took advantage of what it considered as highly attractive prices to sell its transportation properties for $4,500,000 in cash and realized substantial tax savings in connection with this transaction. As a consequence, the retention of the transportation properties is no longer a matter of controversy and the principal question remaining for determination by the Supreme Court is whether or not Gulf States Utilities and El Paso Electric Company may be retained in addition to Virginia Electric & Power Company. It is the general opinion that the Supreme Court is likely to uphold the Securities and Exchange Commission in its order requiring the Company to dispose of all its subsidiaries with the exception of Virginia Electric & Power Company. In this event, the investments of the parent company in the properties to be sold or otherwise disposed of, would appear to have an approximate value, at the present price level for good utility equities, sufficient to redeem the parent company's preferred stocks now outstanding in the amount of $39,245,500, and leave something in the neighborhood of $10,000,000 of net working capital in cash and cash items available for investment in the remaining subsidiary.

Capitalization:

The parent company has a relatively simple capitalization inasmuch as there is no funded debt and the preferred stocks have no dividend arrears. The capitalization, consisting only of preferred and common stocks, is as follows:

	Shares	Call Price
$5 Preferred Stock	143,951	105
$5.50 Pref. Stock	183,406	110
$6 Preferred Stock	65,098	110
Common Stock	1,909,968	

Preferred Exhibit No. 26-H (Cont'd)

The preferred stocks have no par value but are entitled to $100 per share at involuntary liquidation. However, it still remains to be determined by the S.E.C. and the courts what price preferred stockholders are entitled to receive if the preferred stock is redeemed as a necessary step in the integration of the System and the eventual dissolution of the parent company. It is our opinion, based on other holding company integrations, that it is hardly likely that it will be necessary to pay the call prices, but in order to arrive at a conservative value for the parent company common stock, we have assumed, for purposes of calculation, that the higher or call prices will be paid.

Earnings:

The System reported consolidated net earnings of $5,151,522 for the 12 months ended January 31, 1945 available for the common stock, which is equivalent to $2.70 a share, as compared with $1.76 for the previous 12 months.

COMPARATIVE CONSOLIDATED INCOME STATEMENT OF ENGINEERS PUBLIC SERVICE COMPANY

PERIOD ENDED JANUARY 31, 1945

	12 Months Ending Jan. 31, 1945	Jan. 31, 1944	Increase
Balance of earnings applicable to Engineers Public Service Company as above	$7,654,131.27	$5,720,673.92	$1,933,457.35
Earnings from subsidiary companies, included as deductions above:			
Preferred dividends declared	44,332.67	49,999.00	5,666.33*
Interest	69,440.00	70,440.00	1,000.00*
Earnings from other sources	39,531.97	224,161.56	184,629.59*
Total	7,807,435.91	6,065,274.48	1,742,161.43
Expenses, taxes and interest	491,440.87	453,853.03	37,587.84
Balance applicable to stocks of Engineers Public Service Company	7,315,995.04	5,611,421.45	1,704,573.59
Dividends on preferred stock of Engineers Public Service Company	2,164,472.66	2,256,083.89	91,611.23*
Balance for common stock and surplus	$5,151,522.38	$3,355,337.56	$1,796,184.82
Earnings per share of common stock	$2.70	$1.76	$.94

* Decrease

Preferred Exhibit No. 26-H (Cont'd)

The pro forma consolidated earnings at the present time, giving effect to various savings and increases not yet fully reflected in the income statement, appear to be in the neighborhood of $3.10 to $3.15 per share and actual earnings are rapidly approaching the pro forma rate. This should have a favorable effect on the near term price of the stock.

Transactions Effecting System Earning Power:

During the past year consolidated earnings were increased by about $114,000 on an annual basis as a result of the refinancing of Gulf States Utilities; by approximately $110,000 annually through the use of $1,650,000 of idle cash for the retirement of the $6 and $7 preferred stocks of El Paso Electric Company of Delaware, an intermediate holding company which was dissolved, and about $80,000 annually as a result of the retirement of parent company preferred stocks. The Company is under contract to sell Savannah Electric & Power Company for approximately $3,780,000 in cash, including certain adjustments. The investment in this subsidiary has been relatively non-productive inasmuch as common stock dividends have not been paid to the parent company for many years and during 1944 Engineers Public Service realized only $44,000 as income. If this additional working capital is eventually applied to further retirement of the parent company preferred stocks, something over $200,000 a year before taxes could be saved on the basis of the average preferred dividend rate.

Virginia Electric & Power Company has filed an application with the S.E.C. to refund $63,500,000 of its first and refunding 3% and 3½% bonds. This will include debt reduction in the amount of $4,500,000 and the refinancing of the balance at a probable rate of 2¾%. Savings from debt reduction and lower interest rates would amount to about $485,000 per year, most of which will be absorbed

Preferred Exhibit No. 26-H (Cont'd)

by an increase in taxes under existing rates, but over the longer term the company is likely to benefit from this reduction in fixed charges.

Missouri Service Company and Northern Kansas Power Company are under contract for sale for about $850,000. When all present contracts for property sales are consummated, parent company net working capital in cash and cash items is likely to be increased to about $10,300,000 plus earnings that will have accrued since the first of the year. The management expects the proposed property sales to be completed at an early date at which time the parent company will have such a large proportion of its total assets in idle cash that the utilization of these funds might well increase pro forma earnings substantially over the present $3.11 indicated rate. If idle working capital in the amount of around $10,000,000 could then be applied to the further reduction of the parent company preferred stock, pro forma earnings might be increased by as much as $550,000 before taxes at present rates. We feel, therefore, that consolidated earnings of the System may well increase for some time to come, as idle cash is put to use and as earnings from the operating properties are improved by debt reduction and refinancing at lower interest rates.

Value of the Integrated System:

A calculation of the estimated break-up value of the System would be of little significance inasmuch as the two properties remaining to be disposed of account for only a little more than one-third of the System earning power. It is the general opinion that integration of the System will be accompanied by elimination of the parent company preferred stocks to simplify the capital structure to common stock only. Engineers Public Service common stock may then come to represent solely an interest in the common stock of Virginia Electric & Power Company. It is

Preferred Exhibit No. 26-H (Cont'd)

also proposed that the parent company will be dissolved when tax benefits no longer justify its continued existence. The common stockholders of the parent company should then be in a position to receive in exchange stock of a sound operating property, namely, Virginia Electric & Power Company.

The following calculation of the System assets, other than Virginia Electric & Power Company, indicates that it should be possible to eliminate all of the parent company preferred stock now outstanding at either $100 per share or at their respective call prices and leave upwards of $9,000,000 of working capital free for investment by the parent company in its remaining subsidiary. The estimated value of Gulf States Utilities and El Paso Electric Companies is necessarily a matter of judgment arrived at by a comparison with the prices of other utility properties that have recently been sold as well as the price-earnings ratios of a number of good grade publicly held and actively traded operating company stocks. At a recent date, sixteen such good grade operating company common stocks sold at approximately 18 times current earnings.

VALUE OF SYSTEM ASSETS OTHER THAN VIRGINIA ELECTRIC & POWER CO.

(Assuming consummation of existing contracts for the sale of properties)

Gulf States Utilities Company approximately	$30,000,000
El Paso Electric Company approximately	10,000,000
Minor property approximately	1,200,000
Working capital approximately	10,300,000
	$51,500,000
Less Parent Co. preferred stocks at their respective call prices	42,450,000
Balance approximately	$ 9,000,000

Preferred Exhibit No. 26-H (Cont'd)

El Paso Electric Company reported gross income of $3,836,000 and net income of $665,000, after excess profits taxes of $695,000. The balance available for the common stock was $597,000, equivalent to approximately 15½% of operating revenues, indicating a conservative capital structure. If this equity is valued at 16 times, it would appear to be worth in the neighborhood of $10,000,000, as indicated above. Recent sales of less attractive utility properties at 14 to 15 times earnings appear to bear out this ratio.

Gulf States Utilities Company recently reported gross revenues of $17,484,000 and net income of $2,758,000, after excess profits taxes of $2,809,000. The balance available for the common stock was $2,164,000, which is 12.4% of gross revenues, again indicating a conservative capitalization. This property has an outstandingly strong growth factor which is reflected by a high credit rating as evidenced by the recent refinancing and, as a consequence, the equity would appear to be conservatively worth about 15 times the balance available, or about $30,000,000.

As an integrated System, in accordance with the order handed down by the S.E.C., the common stock of Engineers Public Service would then derive its entire earning power from Virginia Electric & Power Company. The Virginia Company recently filed a pro forma statement of earnings giving effect to (1) merger with Virginia Public Service Company; (2) the sale of its transportation properties and (3) the proposed refinancing. The balance of earnings available for the common stock of the year ended December 31, 1944, giving effect to these transactions, was stated as $4,477,644. Such earnings from Virginia Electric & Power Company would be equivalent to $2.30 per share of Engineers Public Service Company common stock (assuming the preferred stock has been paid off) but do not take into consideration the profitable use of upwards of $9,000,000 of parent company working capital in cash and cash items that probably will be available, as indicated by the above calculations. If it is assumed that parent company work-

Preferred Exhibit No. 26-If (Cont'd)

ing capital is then invested as additional equity in Virginia Electric & Power Company either through the reduction of debt or preferred stocks, the earning power might well be increased to over $2.60 per share of Engineers Public Service Company common stock.

Virginia Electric & Power Company has a high credit rating which has been improved by the sale of the traction properties. As a consequence of this sale, a substantially greater proportion of gross revenues now come through to net income. Furthermore, the bonds of Virginia Electric & Power Company will now become legal for savings banks and trust funds in many states where formerly the high proportion of traction revenues prevented the bonds from qualifying as a legal investment. Debt reduction, large payments on serial obligations, together with a possible substantial investment by the parent company, should materially enhance the value of this equity. Under existing market conditions, earnings of $2.60 a share from an operating property of as good quality as Virginia Electric & Power Company might be considered worth from 14 to 17 times, indicating a value of $36 a share and upwards for Engineers Public Service common.

As a consequence, we continue to feel that the common stock of Engineers Public Service is an attractive commitment for capital gain on a long term basis and the price in the near term is likely to improve as reported earnings increase to approach the pro forma rate.

* * *

We have a position in the common stock of Engineers Public Service Company.

BEAR, STEARNS & Co.

ERIC ETHERINGTON

New York 6

November 17, 1945.

ENGINEERS PUBLIC SERVICE CORPORATION

Common Stock

Current Price: 32
1945 Range: 33¼-16

In May of this year we published a long study of Engineers Public Service Corporation. During the intervening months two major changes have taken place which affect the valuation for this company, namely the company's plan of divestment filed with the S.E.C. on September 10th, and the sharp market rise in utility stocks. In the light of these developments we believe that Engineers Public Service is still one of the few remaining utility holding company common stocks selling substantially below indicated breakup value and we therefore believe that the common stock is attractive at the current price of 32.

Engineers Public Service is a public utility holding company which at the present time owns three major subsidiaries—Virginia Electric & Power, Gulf States Utilities and El Paso Electric Company as well as a small company—Western Public Service. In addition, the parent company has substantial working capital. Senior capitalization consists of $39,245,000 5%, 5½%, and 6% preferred stocks.

The recently-filed divestment plan of Engineers Public Service provides that rights be issued to common stockholders of Engineers to purchase one share of reclassified Gulf States Utilities stock for $11.50. Funds derived from this operation, together with working capital and a $3 mil-

Preferred Stockholders' Exhibit No. 26-I (Cont'd)

lion bank loan, would be used by the company to pay off the preferred issues at par. It is further contemplated to distribute ⅓ share of El Paso Electric for each share of Engineers and to sell Western Public Service, leaving Virginia Electric & Power as the only subsidiary which would be merged into the parent company. The plan of Engineers Public Service is tentative, dependent on a decision by the U. S. Supreme Court on the validity of Section 11 of the Holding Company Act (usually referred to as the "Death Sentence"). The Supreme Court is currently holding hearings and an early decision is expected. The outline of the proposals of Engineers seems to be in line with S.E.C. philosophy, so that early action can be expected. There is one point, however, which might raise some questions. In recent decisions the S.E.C. has held that call price as well as involuntary liquidation price has to be considered in plans for retiring senior securities. If the S.E.C. should hold that the preferred stocks of Engineers Public Service are entitled to their call prices, an additional $3,200,000 would have to be raised which would probably mean that El Paso Electric would have to be sold, presumably also through rights to Engineers' stockholders, instead of being distributed as a liquidating dividend.

We think that the general features of the plan are favorable to the stockholders of Engineers and it is now possible to look forward to a more rapid liquidation of the system than would have appeared possible only a short time ago.

The principle which has to underlie any appraisal of a holding company is to value its component parts in line with the current market appraisal for similar operating utility stocks. This was the principle followed in our analysis in May. It is interesting to note that the six issues with which Virginia Electric & Power and Gulf States Utilities were compared at that time have risen by 23% in the market. It therefore becomes immediately apparent that the potential market value of the subsidiaries of Engineers Public Service has advanced substantially during the last 6 months.

Preferred Stockholders' Exhibit No. 26-I (Cont'd)

The earning power of utilities has not altered radically but fears for a sharp cut in electric revenues after the war have been dispelled by the negligible reductions witnessed so far. Moreover, the public is placing a higher value on the potential savings in taxation which should be realized after the elimination of the excess profits tax becomes effective on January 1, 1946.

Virginia Electric & Power Company distributes electricity in Virginia and northeastern North Carolina. The area serviced has a population of 1,694,000 and comprises the cities of Richmond, Norfolk and Newport News, Virginia. Gas is sold in a smaller territory with a population of 356,000.

In May 1944 the company was merged with Virginia Public Service, a subsidiary of General Gas & Electric. For the 12 months ended September 1945, earnings of Virginia Electric & Power were $4,191,000 after preferred requirements, equivalent to $2.19 per common share of Engineers, compared with pro-forma earnings of $2.02 per share for the 1944 calendar year. These earnings were restated to eliminate a reduction of Federal Income Taxes resulting from amortization of defense facilities. These adjustments account for a reduction of 53 cents and 37 cents respectively from the reported earnings as shown by the corporation. For the purpose of proper analysis, it is believed that a reduction of a tax liability of this kind does not constitute proper earning power.

It should be noted that the company deducts $693,000 a year from income for amortization of intangible assets. This is purely a bookkeeping item and many other companies do not regard it as a proper deduction from earnings. Some weight ought to be given to this factor in appraising Virginia Electric & Power.

In the light of current market conditions and with due consideration to the fact that income and excess profits taxes amounted to 61% of reported available income before

Preferred Stockholders' Exhibit No. 26-I (Cont'd)

taxes, we believe that a valuation of 17 times current earnings is reasonable for Virginia Electric & Power.

Gulf States Utilities is an electric utility and to a much smaller extent a gas, water and ice company operating in the southeastern part of Texas and south central Louisiana. The area serviced has a population of 550,000 and extends over 27,000 square miles. The largest cities in this territory are Beaumont and Port Arthur, Texas, and Baton Rouge and Lake Charles, Louisiana. Gulf States reported earnings of $1,982,000 after preferred dividend requirements for the 12 months ended September 1945, equivalent to $1.04 per share of Engineers, which compares with earnings of $1,870,000, equal to 98 cents on a pro-forma basis for the 1944 calendar year. As in the case of Virginia Electric & Power a reduction in Federal Income Taxes resulting from amortization of defense facilities, amounting to 51 cents per share, was deducted by us from reported net income. We think it is reasonable to value Gulf States at 16 times earnings.

El Paso Electric is operating in El Paso, and in an area extending 100 miles northwest of El Paso. Reported earnings of the company for the 12 months ended September 1945 were $577,000. We believe that these earnings should be capitalized at 15 times.

The table below shows the estimated breakup value for Engineers Public Service:

	Earnings	Earnings Per Share of Engineers	Estimated times Earnings Ratio	Estimated Breakup Valu	Per Share Engineers Public Serv.
Net Working Capital, September 30, 1945				$11,800,000	
Estimated Sales Price Western Public Service				1,000,000	
				$12,800,000	$5.70
Virginia Elec. & Power	$4,191,000	$2.19	17	71,247,000	37.30
Gulf States Utilities	1,982,000	1.04	16	31,712,000	16.60
El Paso Electric	577,000	0.30	15	8,655,000	4.50
				$124,414,000	$65.10
Less Preferred Stock at par			$39,245,000		
Call Premium			3,205,000		
Preferred at call price				42,450,000	22.20
				$ 81,964,000	$42.90

Preferred Stockholders' Exhibit No. 28.

STATEMENT AND AFFIDAVIT

of

RALPH E. BADGER

I, Ralph E. Badger, on oath hereby depose and say that—

I. In 1913 I received the degree of Bachelor of Arts from Dartmouth College. In 1914 I received the degree of Master of Business Administration from the Amos Tuck School of Business Administration at Dartmouth. In 1921 I received the degree of Doctor of Philosophy in Economics from Yale University.

II. I was instructor in certain courses given in the Sheffield Scientific School at Yale from 1915 to 1921. In 1921 I was appointed Assistant Professor, later Associate Professor, and then Full Professor of Economics at Brown University, Providence, R. I., from which position I resigned in 1929 to come to Detroit. The courses in which I specialized were Corporation Finance and Investments.

III. In 1925 I wrote, and Prentice-Hall, Inc., of New York City, published, a book entitled "The Valuation of Industrial Securities". In 1928 I completed, and Prentice-Hall, Inc. published, a book entitled "Investment Principles and Practices". This book has been used as a text book in many universities and colleges, has been reprinted a number of times, and has been revised twice. It was recently revised in collaboration with Professor Guthmann of Northwestern University. In 1930 I completed a book entitled "Problems In Investments" in collaboration with Henry Murphy. I have written a number of articles for current publications and professional publications since that time.

Preferred Stockholders' Exhibit No. 28 (Cont'd)

IV. From 1926 to 1929 I was investment advisor to the Estate of Frank A. Sayles, Providence and Pawtucket, R. I. This Estate had assets in excess of $30,000,000. Prior to 1926 I had been employed in connection with the valuation of certain closely-held securities owned by the Estate. From 1929 until February, 1943, I was either Executive or Senior Vice President of the Union Guardian Trust Company of Detroit, and acted in that connection as Trust Investment Officer of the Company. In February, 1943, the Union Guardian Trust Company merged with the Detroit Trust Company, at which time my relations ceased. In 1933 I became President of Investment Counsel, Inc. This is a professional organization which acts in a consulting capacity regarding the investment policies of banks, insurance companies, charitable institutions, and individuals. In both connections I am constantly called upon to express opinions relative to the worth of various types of securities, including both bonds and stocks. The aggregate resources, directly or indirectly, under my supervision exceed $100,000,000.

V. Since about 1923, I have been employed more or less continuously on cases involving the valuation of securities and properties in connection with inheritance and gift taxes, income taxes, property taxes, mergers, and reorganization. The following are some of the matters in which I have been employed.

1923-1928—Various mill properties owned by Estate of Frank A. Sayles, estate taxes involved. No testimony.—

1925—B. B. and R. Knight Mill Properties. To establish a 1913 value for determination of income tax in connection with subsequent sale. No testimony.

1926—R. Hoe & Company—Sale of properties. No testimony.

Preferred Stockholders' Exhibit No. 28 (Cont'd)

1927—Ford Tax Case—involving valuation Ford Motor Company stock at March 1, 1913, for purpose of determining taxable gain resulting from sale by minority holders in 1919. United States Board of Tax Appeals.

1928—Coca-Cola Company—valuation as at 1913 re determination taxable gain resulting from sale in 1920 and 1921. No testimony.

1934—Girard Trust et al, Executor Estate Edward W. Bok vs. Commissioner Internal Revenue—valuation common stock Curtis Publishing Company re estate tax of Edward Bok. Uniten States Board of Tax Appeals.

1935—and various dates—valuation properties of Detroit & Canada Tunnel for assessment of local taxes. United States District Court.

1937—Central Railroad of New Jersey vs. Martin, Commissioner, New Jersey. Known as the New Jersey Railroad Cases. Valuation of Terminal Properties and Main Lines in New Jersey for local tax purposes.

1938—Valuation of Almours Corporation, re inheritance taxes, Estate of Alfred I. duPont. Settled prior to trial.

1938-1939—Grand Trunk Western Railroad—valuation properties re Michigan State taxes. United States District Court.

1939—Second National Bank & Trust Company, Saginaw, vs. Lila Eddy Doebler, et al. United States District Court. Testified regarding propriety holding of certain shares of stock in trust.

1940—Chicago Rawhide Company, valuation stock for inheritance tax purposes. Settled prior to trial.

Preferred Stockholders' Exhibit No. 28 (Cont'd)

1941—Motor Products Corporation vs. Commissioner of Internal Revenue, United States Board of Tax Appeals. Testified regarding taxable gain re City of Detroit Bonds received in refunding plan.

1941—Reynolds Investment Company—involving valuation of company re sale of majority of stock. United States District Court. Settled prior to trial.

1942—A. C. Bradley Corporation—re gift taxes. Tax Court of United States.

1942—Leobold et al vs. Inland Steel Company—valuation Inland Steamship Company for purposes of assessing damage re liquidation thereof. United States Circuit Court of Appeals, 7th Circuit.

1942—Stroh Brewery Company—valuation stock for estate tax purposes. Tax Court of United States.

1942-1943—Estate of Alexander J. Shamberg, Isidor Shamberg, Administrator, vs. Commissioner of Internal Revenue, Respondent, Port of New York Authority Case. Testified for Bureau of Internal Revenue in April, 1943. Tax Court of United States.

1943—Gelatin Products Co.—valuation equity for gift tax purposes. Tax Court of United States.

1944—I worked on a number of cases and completed reports thereon. In none of these cases, however, did the matters involved come to trial; all were settled prior to trial.

1945—Estate of Mark Munroe vs. Commissioner, —valuation stock of Coca-Cola Company and Coca-Cola International. Edmund H. Lunken vs. Commissioner—valuation common stock of Lunkenheimer Company. Testified in both above cases before United States Tax Court. Appeared as witness before Conference Section or Technical Staff re valu-

Preferred Stockholders' Exhibit No. 28 (Cont'd)

ation common stock J. L. Hudson Company, Detroit; S. E. Overton Company, South Haven, Michigan; and Papec Machine Company, Rochester, New York. Testified before The Securities & Exchange Commission in behalf of Allied Chemical & Dye re valuation of American Light & Traction Company Preferred stock. Testified before the Tax Court re valuation Andrew Jergens Company, in Cincinnati. Also worked on several cases and completed reports thereon, which cases were settled before trial.

VI. In connection with the preceding and other cases in which I have been employed, I have qualified as an expert on valuation and have testified, as indicated, before the former United States Board of Tax Appeals, the present Tax Court of the United States, and various State and Federal Courts.

VII. That the conclusions in the report attached hereto are my own conclusions, were arrived at in good faith, and are based on facts and figures which to the best of my knowledge and belief are correct.

RALPH E. BADGER
Ralph E. Badger

Ralph E. Badger, being duly sworn, deposes and says that the facts and statements set forth herein are true to the best of his knowledge and belief.

REPORT ON VALUATION OF
$5 DIVIDEND CONVERTIBLE PREFERRED STOCK,
$5.50 & $6 CUMULATIVE DIVIDEND
PREFERRED STOCKS

ENGINEERS PUBLIC SERVICE COMPANY, INC.
(A DELAWARE CORPORATION)

AS AT JANUARY 15, 1946

Prepared by

RALPH E. BADGER
DETROIT, MICHIGAN

January 24, 1946

Preferred Stockholders' Exhibit No. 29 (Cont'd)

REPORT ON VALUATION OF $5 DIVIDEND CONVERTIBLE PREFERRED STOCK, $5.50 & $6 CUMULATIVE DIVIDEND PREFERRED STOCKS

ENGINEERS PUBLIC SERVICE COMPANY, INC.

(A DELAWARE CORPORATION)

AS AT JANUARY 15, 1946

Purpose:

The purpose of this report is to determine the fair investment value of the $5 Dividend Convertible Preferred Stock, $5.50 and $6 Cumulative Dividend Preferred Stock of Engineers Public Service Company, Inc., a Delaware Corporation, as at January 15, 1946.

The three classes of preferred stock of Engineers Public Service Company, Inc. are equally secured in respect to earnings and assets. The conversion privilege in respect to the $5 Convertible Preferred Stock expired June 30, 1938. This feature, therefore, is no longer operative. All classes of preferred stocks are entitled to receive par and accrued dividends in the event of involuntary dissolution or liquidation of the Company. All classes of preferred stocks are callable—the $5 Preferred stock, presently at $105; the $5.50 and $6 Preferred stocks at $110 and accrued dividends. In the event of voluntary liquidation or dissolution of the Company, all three classes of stocks are entitled to receive amounts equivalent to their call prices, plus accrued dividends to the date of call.

Engineers Public Service Company, Inc. is a holding company, incorporated in the State of Delaware in 1925. The System, at the time the Public Utility Holding Company Act of 1935 was passed, comprised Virginia Electric

Preferred Stockholders' Exhibit No. 29 (Cont'd)

& Power Company, Eastern Texas Electric Company, Gulf States Utilities Company, El Paso Electric Company (Delaware), El Paso Electric Company (Texas), El Paso & Juarez Traction Company, Mesilla Valley Electric Company, Baton Rouge Electric Company, Louisiana Steam Generating Corporation, Puget Sound Power & Light Company and Subsidiaries, Savannah Electric & Power Company, The Western Public Service Company, Missouri Service Company, The Northern Kansas Power Company, The Key West Electric Company, and Ponce Electric Company. Engineers also owned securities of El Paso Natural Gas Company and held an option to acquire common stock of that company, which option was later exercised. (See Testimony of R. N. Benjamin, page 20, of transcript of record.)

Since the passage of the Public Utility Holding Company Act, various properties formerly owned by Engineers Public Service Company were either sold or consolidated (Virginia Public Service Company was merged with Virginia Electric & Power Company in 1944), with the result that at January 15, 1945 the System consisted of three operating subsidiaries, to wit:

(1) Virginia Electric & Power Company, a Virginia corporation, engaged in the business of generating and purchasing electric energy and transmitting, distributing, and selling the same at retail and wholesale in parts of Virginia, northeastern North Carolina, and east central West Virginia, comprising approximately 29,700 square miles. The company conducts a manufactured gas business in Norfolk, South Norfolk, Newport News, Hampton, Virginia and vicinity. Its total gross revenue aggregates approximately $40,000,000 annually, 93% being derived from electric operations.

(2) Gulf States Utilities Company, which company is engaged in the business of generating and purchasing electric energy and transmitting, distributing, and selling the

same at retail and wholesale in an area in western Texas, and south central Louisiana, comprising approximately 27,500 square miles. Steam is supplied to certain large industrial customers in Baton Rouge and natural gas is purchased at wholesale and distributed at retail in Baton Rouge, Louisiana and vicinity. Company supplies water in six communities with an estimated populaton of 108,000, and manufactures and distributes ice in five communities. Total gross revenues approximate $18,000,000, of which 91.7% is derived from electric and steam operations, 4.9% from gas operations, the balance from water and ice operations.

(3) El Paso Electric Company. This company is engaged in the business of generating and purchasing electric energy, transmitting, distributing, and selling the same at retail and wholesale in El Paso, Texas and in an area in the Rio Grande Valley in Texas and New Mexico approximately 100 miles northwesterly from El Paso to the Caballo Dam in New Mexico and approximately the same distance southwesterly from El Paso to Van Horn, Texas. The company sells electric energy at retail in fourteen communities in Texas and twenty communities in New Mexico, together with the surrounding rural districts which have an estimated combined population of 170,400, of which 118,000 reside in El Paso. Energy is supplied at wholesale to Compania Productura DeLuze y Fuerza, S. A. for resale in the city of Juarez, Mexico. Total gross revenues are approximately $4,000,000 annually.

It is unnecessary, at this juncture, to discuss at length the history of the various relationships between the Securities & Exchange Commission and Engineers Public Service Company with reference to efforts of the Commission to bring about a compliance on the part of the Company with the requirements of the Public Utility Holding Company Act of 1935. It is sufficient at this point to state that Engineers Public Service Company had, prior to September 13, 1945, divested itself of a number of its properties,

Preferred Stockholders' Exhibit No. 29 (Cont'd)

had effected various mergers, and had simplified its corporate structure to the point of owning the three previously described systems.

The Company, at September 10, 1945, was under orders to determine whether it would elect to retain Virginia Electric & Power Company as its principal operating system and dispose of Gulf States Utilities Company and El Paso Electric Company, or to maintain Gulf States Utilities Company and possibly El Paso Electric Company, which choice would require divesting itself of Virginia Electric & Power Company. In the event that the Company chose to maintain Virginia Electric & Power Company, it might continue in existence as a holding company or merge with Virginia Electric & Power Company.

On September 10, 1945, the Company filed a plan pursuant to Section 11 (e) of the Public Utility Holding Company Act of 1935 for divestment of assets and related matters. At subsequent times, four Amendments were filed to said Plan.

In brief, the Plan and Amendments provide (1) for increasing the common stock of El Paso Electric Company from 150,000 authorized common shares to 381,994 common shares, and the distribution of said shares to holders of Engineers common stock on the basis of one share of El Paso Electric for each five shares of Engineers' held. Scrip is to be issued in lieu of fractional shares; (2) that the common shares of Gulf States be increased from 280,000 to 1,909,968 common shares without par value; (3) that the holders of Engineers' common be issued warrants entitling such holders to purchase one share of Gulf States common at $11.50 a share for each share of Engineers' common held (Provision was made in the case of the common stockholders owning both preferred and common stock for such holders to make payment for their subscription to Gulf States common by the use of Engineers' Preferred stock (any class) at $100 a share); (4) the cash received from the sale of Gulf States, plus cash presently available in the

Preferred Stockholders' Exhibit No. 29 (Cont'd)

treasury of Engineers, plus proposed bank borrowings of $3,000,000 would be used to pay off all classes of Engineers Public Service Co. pany Preferred stock at $100 a share; and (5) Engineers would then be liquidated and dissolved, its remaining liabilities disposed of, and the common stock of Virginia Electric & Power Company together with its remaining assets, distributed pro rata to Engineers' common stockholders.

The Plan, as set forth above, and as adopted by the Board of Directors, was subject to the dissent by one Mr. Thomas W. Streeter, who is a Director of Engineers Public Service Company. Mr. Streeter's objection involves, among other things, the legal question as to whether or not the Plan, as above described, constitutes, in respect to the liquidation of Engineers Public Service Company, a voluntary or an involuntary liquidation. In addition to the legal question as to whether or not the Plan constitutes a voluntary or involuntary dissolution, the question as to the fair investment value of the several classes of Preferred stock of Engineers Public Service Company arises.

It is my purpose, therefore, in the following report to appraise the fair investment value of the three classes of Preferred stock of Engineers Public Service Company without regard to its proposal to liquidate, either voluntarily or involuntarily, in order to meet the requirements of Section 11 of the Act.

"Fair investment value" may be defined as the price or value at which the shares of the several classes of stock would exchange hands between willing buyers and willing sellers, neither under compulsion to buy or to sell and both thoroughly informed of all of the various elements of values.

The fair investment value of the several classes of Preferred stock of Engineers Public Service Company, which I expect to arrive at, therefore, will be predicated upon the assumption that Engineers Public Service Company shall continue in operation as presently constituted.

Preferred Stockholders' Exhibit No. 29 (Cont'd)

BASIS OF VALUATION:

Although the several classes of Preferred stock of Engineers Public Service Company are bought and sold on the New York Stock Exchange, the reported prices at the present time can not be regarded as representative of fair investment value. The range on the three classes of Engineer's Preferred stock, for the week ended January 5, 1946, was as follows:

	High	Low	Average
$5.00 Series	$106.00	$105.00	$105.50
$5.50 "	$107.00	$105.00	$106.00
$6.00 "	$108.00	$106.50	$107.25

These prices, in addition to reflecting the ordinary market factors such as money rates and matters of investment risk, also reflect at the present time two collateral factors, namely, possible dissolution either voluntary or involuntary, under provisions of Section 11 of the Public Utility Holding Company Act, as well as the Plan with its several Amendments filed September 10, 1945, which provides for eventual dissolution of Engineers Public Service Company *and the payment of $100 per share and accrued dividends* for its several classes of Preferred stock.

Preferred stocks enjoy a claim in respect to the earnings of the corporation, prior to the claim of the common stockholder but a claim which is limited to the amount of the stated dividend. In the case of Cumulative Preferred stocks, any unpaid dividends remain as contingent charges against the corporation and must be paid before dividends may be paid on the common stock. Except insofar as a preferred stock may be callable at a specific price, preferred stocks are in the nature of perpetual annuities, and should be valued by capitalizing their dividend rates at rates of capitalization which give full weight to inherent investment risk and money rates at the date of valuation.

In the case of Callable Preferred stock, however, there is an upper limit placed upon values, since the issuing cor-

poration reserves the right to call such stocks at stated prices upon relatively short notice. Callable Preferred stocks, therefore, do not as a rule sell substantially in excess of their call prices and the amount by which market prices sometimes exceed call prices is represented by an estimate of the probability, or lack of probability, that the stock will be called in the immediate future.

In valuing the several classes of Preferred stock of Engineers Public Service Company, *as a going concern,* I propose to show that the fair investment value of these several classes of Preferred stock would be, under present conditions, substantially in excess of their call prices, were it not for the fact that each of these classes of stocks is callable at a stated price or premium, and that their present fair investment values are represented by their call prices plus a slight premium to account for the time required to effect a call.

ECONOMIC CONDITIONS AND MONEY RATES—JANUARY, 1946:

It is unnecessary, at this juncture, to go into a lengthy discussion of our banking structure nor to discuss the various repercussions which have followed the huge increases in our Federal debt and bank deposits, stemming from World War II. It is sufficient to state here that the effect of Government financing, as carried on during the past several years, has been (1) substantially to increase deposit currency in circulation, (2) substantially to increase actual money in circulation, and (3) to increase the dollar value of high-grade bonds and preferred stocks with a concomitant reduction in the yields thereon. These tendencies were prevalent in 1932 but have been greatly aggravated as a result of changes which took place from 1939 to date. The following table indicates clearly the history of interest rates during the period 1932 to date.

Preferred Stockholders' Exhibit No. 29 (Cont'd)

YIELDS ON U. S. GOVERNMENT BONDS, HIGH-GRADE CORPORATE BONDS, AND HIGH-GRADE PREFERRED STOCKS

1932 TO NOVEMBER, 1945

Year	U. S. Governments(1)	High-Grade Corporate Bonds(2)	High-Grade Preferred Stocks(3)
1932	3.68	5.28	6.13
1933	3.31	4.69	5.75
1934	3.12	4.14	4.29
1935	2.79	3.61	4.63
1936	2.65	3.34	4.33
1937	2.68	3.30	4.45
1938	2.56	3.20	4.34
1939	2.36	3.02	4.17
1940	2.21	2.92	4.14
1941	1.95	2.84	4.08
1942	2.02	2.85	4.31
1943	1.87	2.80	4.06
1944	1.74	2.77	3.98
1945	1.46 (Nov.)	2.67 (Nov.)	3.65 (Nov.)

(1) Data through 1942 taken from U. S. Statistical Abstract, 1943, pp. 374; thereafter, Standard Statistics Average.
(2) Standard Statistics Average, High-Grade Corporate Bonds.
(3) Standard Statistics Average.

An examination of the preceding tabulation indicates clearly the low levels to which the interest rates and, correspondingly, the low level to which the rates on preferred stocks have gone during the past several years. The yields on high-grade preferred stocks, which in the early 'Thirties ranged from 4½% to 6%, have dropped to a current level of 3.65%. High-grade corporate bond yields have dropped from a level of over 5% to 2.67%. The yields on high-grade public utility preferred stocks have closely followed this trend. I refer to Pacific Gas & Electric, Non-Callable, 6% Preferred stock having a Par Value of $25.00. This stock averaged to sell in the month of December, 1945, at $43.00, which would give it a yield of 3.49%. Buffalo Niagara Electric Corporation recently brought out a 3.6% Preferred stock for sale to the public at approximately $102.8, or at a yield of 3.50%. Many other examples of similar nature

Preferred Stockholders' Exhibit No. 29 (Cont'd)

might be given. In other words, high-grade public utility preferred stocks have closely followed the general average of all high-grade preferred stocks.

It does not require an exhaustive presentation of statistics to show that the yields on preferred stocks are, at the present time, the lowest which they have ever been in the history of our country, or, conversely, that the prices of such stocks are at the highest levels ever experienced. The permanency of this situation will depend on the permancy of low interest rates. In this connection I would like to quote from the Federal Reserve Bulletin of November, 1945, page 1099, as follows: "In view of the existing sources of demand for Government securities and the reduced supply of new securities, prospects are for a continued strong market for these securities. Under the circumstances, demands are particularly strong for the intermediate and long-term issues bearing the higher yields. Such of these issues as can be held by banks will be in demand by banks, while non-bank investors may be expected to buy principally the issues that are not eligible for purchase by banks." This statement appeared in an unsigned article which indicates, in accordance with the stated policy of the Editorial Committee, that said Committee, representing the Board of Governors of the Federal Reserve System, are responsible for interpretations and opinions expressed therein.

The Honorable Secretary of the Treasury, Mr. Vinson, has, on numerous occasions, expressed his confidence in the permanency of present low rates of interest. The Federal Government, with its present huge debt, a substantial portion of which comes due in less than five years, is vitally interested in the maintenance of low interest rates. There are few people today who are of the opinion that any substantial rise in interest rates is likely to take place in the reasonably near future. High-grade preferred stock prices may, therefore, be anticipated to remain at high levels and the yields on high-grade preferred stocks at current low levels for a considerable period of time to come. It may,

Preferred Stockholders' Exhibit No. 29 (Cont'd)

therefore, be stated that the present level of preferred stock prices is, as far as one can humanly predict, a permanent level.

The market action of high-grade bonds or preferred stocks does not fluctuate as widely or as erratically as does the market for common stocks; nor do we find, in respect to preferred stocks, prices fluctuating widely because of temporary and speculative conditions. The prices of preferred stocks today are predicated on fundamental conditions prevailing in the money markets, conditions which are of a permanent nature.

The values which I propose to place on the several classes of Preferred stock of Engineers Public Service Company are, therefore, values of a permanent nature and are not values of a temporary or speculative nature.

I have examined at some length the history of Engineers Public Service Company as set forth in various exhibits already received in this case, as set forth in various releases of the Securities and Exchange Commission, and as discussed in the testimony of the officials of the Company in the present matter. I have also examined the records in respect to the Company's properties, the Company's business, the management of the Company, the asset position of the Company (as disclosed by its various statements), the earnings and dividend record of the Company, and other pertinent data having a bearing on the value of Engineers Public Service Company Preferred stock.

Earnings Analysis:

I present herewith an Income Account analysis on a Consolidated Basis for Engineers Public Service Company for the period 1940 through 1945, inclusive.

INCOME ACCOUNT ANALYSIS—CONSOLIDATED BASIS
ENGINEERS PUBLIC SERVICE COMPANY, INC. & SUBSIDIARIES
1940 THROUGH 1945, INCLUSIVE

	1940	1941	1942	1943	1944	(Nov. & Dec. Estimated) 1945

(1) Does not give effect to reduction in Federal Income & Excess Profits Taxes resulting from extraordinary non-recurring deductions. If such items were used to reduce taxes accordingly, (as set forth in Applicant's Exhibits 53 and 66) over-all coverage would be 2.12.

(2) Holding Company expenses not segregated. $893,800 represents amortization of plant acquisition adjustments.

Preferred Stockholders' Exhibit No. 29 (Cont'd)

Data for years 1940-1944, inclusive, taken from Applicant's Exhibits 37-P through 37-T. 1945 data from Exhibit 63, page 2.

An examination of this data indicates that, during the period under consideration, there was a continuous improvement in the Times Charges and Preferred Dividends Earned (i.e., over-all charges), with the exception of the year 1945. In the year 1940, all Charges and Preferred Dividends, on a Consolidated Basis, were earned 1.22 times. This figure increased gradually until all Charges and Preferred Dividends were earned in the year 1944, 1.54 times. In the year 1945, all Charges and Preferred Dividends were earned 1.47 times, provided no effect is given to the reduction in Federal Income and Excess Profits Taxes in that year, resulting from extraordinary non-recurring deductions. If such items were used to reduce taxes accordingly, over-all coverage would have been 2.12 times.

Operating ratios, on a Consolidated Basis, amounted to 65.07% in 1940, dropped to 62.30% in 1942, gradually dropped to 59.93% in 1943, increased to 62.10% in 1944, and dropped to 60.32% in 1945. The Company's appropriation for Depreciation and Maintenance averaged between 17.8% of Gross in the year 1940 to 13.8% in 1945.

I present herewith an Analysis of Income Data relative to Engineers Public Service Company, for the years 1940 through 1945, inclusive, showing the Times Parent Company Preferred Dividends were earned.

Data for the years 1940-1944, inclusive, taken from Applicant's Exhibits 37-P through 37-T. Data for 1945 was taken from Page 2 of Applicant's Exhibit 63.

An examination of the preceding tabulation indicates that Preferred Dividend requirements of the Parent Company, based on balance of earnings available for Engineers Public Service Company, were covered between 1.81 times and 3.2 times for the period studied. For the year 1945, Parent Company Preferred Dividend requirements were covered 2.77 times, if no effect is given to reduction in Federal Income and Excess Profits Taxes resulting from extraordinary or non-recurring deduction. If such items were used to reduce taxes accordingly, the Parent Company's Preferred Dividends would have been earned 4.75 times.

ANALYSIS INCOME DATA
ENGINEERS PUBLIC SERVICE COMPANY, INC.
1940-1945, INCLUSIVE

	1940	1941	1942	1943	1944	1945
Bal. Subs. Applic. to Parent Co.	$5,320,129.97	$5,274,503.56	$4,281,694.59	$5,702,372.79	$7,273,333.62	(Nov.

	$ 3,638,121	$ 1,454,300	$ 283,400	$ 5,375,821	$2,119,076	$ —	$ 7,494,897

Preferred Stockholders' Exhibit No. 29 (Cont'd)

It will be seen from this study that Over-all Charges in the year 1946 will be earned 1.67 times, and that Parent Company Preferred Dividends alone will be earned 3.39 times.

This estimate of 1946 earnings indicates a continuation of the improvement in earnings shown for the 1940-1945 period, as coverage, both in respect to over-all charges and Parent Company preferred dividends, is estimated to be higher in the year 1946 than in any of the years 1940 through 1945.

The public utility industry has for many years been characterized by stability and by a strong growth trend. There are no peculiar economic characteristics in respect to the territories served by the present subsidiaries of Engineers Public Service Company which would indicate that the earnings trend of these companies would go counter to that of the industry. It is a reasonable assumption, therefore, that this Company should continue in future years to register progress along with other units in the industry.

Balance Sheet Data:

I present herewith Consolidated Balance Sheet Data for Engineers Public Service Company and Subsidiaries, for the years 1942 through 1944, inclusive.

Preferred Stockholders' Exhibit No. 29 (Cont'd)

% Prior Oblig.: Total Capital	71.62	60.37	68.26
% Pfd. & Subord. Items: Total Cap.	28.38	39.63	31.74

At December 31, 1944, Engineers Public Service Company showed a book value of equity in the amount of $192.50 for each share of preferred stock. Net Quick Assets amounted to $17,147,000, or the equivalent of 10.55% of Obligations prior to aggregate Preferred stock. Obligations prior to Parent Company's Preferred stock amounted to 68.26% of total capitalization, whereas preferred stock of the Parent Company and subordinate capital items represented 31.74% of total capitalization.

I made another calculation in respect to the Corporate Balance Sheet of Engineers Public Service Company in which study I determined the values of Engineers' investments in the common stocks of subsidiaries by capitalizing 2 year average earnings of the major subsidiaries held by Engineers' at December 31, 1944 on the assumption that the equities in these companies were worth 15 times 2 year average earnings.

Applicant's Exhibit 14 presents a study of the Price: Earnings Ratios of the common stocks of four companies,

Preferred Stockholders' Exhibit No. 29 (Cont'd)

to wit: Houston Lighting and Power, Idaho Power, Indianapolis Power & Light Company, and Tampa Electric Company. At October 6, 1945, these stocks averaged to sell at 14.44 times average per share earnings for the period 1938-1941, inclusive; 16.04 times yearly average earnings for the period 1942-1944, inclusive, plus 12 months ended June 30, 1945; 15.20 times yearly average earnings for the period 1938-1944, inclusive, plus 12 months ended June 30, 1945; 15.58 times per share earnings for the year 1944; and 14.90 times 12 month's earnings ended June 30, 1945.

In this connection I would also like to refer to Appendix "A" of a report which I prepared in connection with the Valuation of the Preferred Stock of American Light & Traction Company, which report is on file with the Securities & Exchange Commission. At May, 1945, the study contained in the Appendix referred to indicated that 13 electric and gas companies' common stocks averaged to sell at 15.85 times 5 year average earnings, for the period 1940-1944, inclusive.

A reconstruction of the Comparative Balance Sheet of Engineers Public Service Company (Parent Company only), appearing on page 17, Applicant's Exhibit 37-T, using reconstructed value of subsidiary common stocks by the use of a multiple of 15 times applied to 2 year average earnings, eliminating Reserve for Depreciation in the value of investments and taking other items at Book Values, indicates Net Assets Available for Preferred stock of Engineers Public Service Company in the amount of $99,267,911, or at the rate of $252.94 per $100 of Preferred stock. It should be further stated, in respect to this item, that this figure represents in substance the readily marketable value of assets available as security for the Preferred stock of Engineers Public Service Company, since the common stocks of any or all of the subsidiaries held could, at the date covered by the statement, have been sold at prices approximating the figures set forth in this study. Subsequent to December 31, 1944, certain of the properties have been sold.

NOTE: Release #5499, page 6, Engineers' investment in El Paso set up originally $6,598,539.

In respect to the value set forth in the preceding study, I would like to call attention that on Page 6 of the Securities & Exchange Commission's Release, #5499, is stated Engineers' investment in El Paso was set up at $6,598,539.

I would like further to refer to Page 163 of R. N. Benjamin's Testimony, Tr. of Record, 163, in which he states that on December 3; 1945 Engineers had received five bids for either the purchase of the capital stock or the assets of Western Public Service Company, and that the Board of Directors, at a meeting held that day, authorized the acceptance of a bid which would produce $843,000 for the capital stock of Western Public Service Company, plus $508,800 in payment of a Demand Note owing to Engineers Public Service Company from Western Public Service Company, and certain additional adjustments for net current

Preferred Stockholders' Exhibit No. 29 (Cont'd)

assets, bringing the aggregate amount of cash to be received up to approximately $1,500,000. If the Demand Note is eliminated from the above figure, the amount applicable to the common stock from this sale would be approximately $1,000,000.

Applicant's Exhibit 14 shows the current valuation of Gulf States Utilities Company, on the basis of comparative studies, to be $29,981,000.

On Page 6 of Applicant's Exhibit 37-T, it is stated that on April 25, 1945 Engineers Public Service Company sold to Donner Estates, Inc. all of the securities of the Savannah Electric and Power Company for $3,387,500, as against the Company's carried value for said securities of $3,165,965.

Dividend Record:

The dividend record of Engineers Public Service Company, in respect to its several classes of Preferred stock, has been as follows:

(1) $5 Cumulative Preferred, No Par: Initial dividend of $1.25 per share paid October 1, 1928. Regular dividends paid quarterly, January 1, etc. to July 1, 1933, inclusive; none thereafter to August 1, 1936, when $4 was paid on account of arrears; November 2, 1946, $6.00; 1937, $8.75; January 3, 1938, $1.25 regular and $2.50 on arrears, clearing all arrears. Regular dividends paid thereafter, quarterly January 1, etc. to stock of record about December 14, etc.

(2) $5.50 Cumulative Preferred, No Par: Initial dividend of $1.375 per share paid January 2, 1929. Regular dividends paid quarterly, January 1, etc. to stock of record about December 17, etc., to July 1, 1933, inclusive; none thereafter to August 1, 1936, when $4.40 was paid on account of arrears; November 2, 1936, $6.60; 1937, $9.625; January 3, 1938, $1.375

Preferred Stockholders' Exhibit No. 29 (Cont'd)

regular and $2.75 on arrears, clearing up all arrears. Regular dividends paid quarterly thereafter, January 1, etc., to stock of record about December 14, etc.

(3) $6 Cumulative Preferred, No Par: Initial dividend of $1.50 per share paid January 2, 1931. Regular quarterly dividends paid January 1, etc. to stock of record about December 17, etc. to July 1, 1933, inclusive; none thereafter to August 1, 1936, when $4.80 was paid on account of arrears, clearing up arrears. Regular dividends paid quarterly thereafter, January 1, etc., to stock of record about December 14, etc.

The Company maintained regular dividend payments on its several classes of Preferred stock from date of issuance until July, 1933, at which time dividends on all classes of stock were temporarily discontinued. Dividend payments were resumed on August of 1937 and by January of 1938 all arrearages had been cleared. Since that time, dividends have been paid with regularity and the present financial condition of the Company indicates continued ability of the Company promptly to meet dividend requirements on all classes of preferred stock.

Comparative Study—Five Public Utility Holding Companies:

I present herewith a comparative study showing the preferred dividend coverages and certain balance sheet ratios, as well as current prices and dividend yields in respect to the preferred stocks of five public utility holding companies which are similar in many respects to Engineers Public Service Company.

Preferred Stockholders' Exhibit No. 29 (Cont'd)

CORRESPONDING PRICE FOR
ENGINEERS PUBLIC SERVICE COMPANY, INC.
PREFERRED STOCKS

Based on Ratio of	$5 Pfd.	$5.50 Pfd.	$6 Pfd.
Columbia Gas & Electric	$105.49	$116.03	$126.58
Niagara Hudson Power	102.75	112.94	123.20
Pacific Public Service	101.83	112.02	122.20
Public Service of N. J.	114.00	125.86	137.30
Wisconsin Electric Power	113.37	124.71	136.05
Average	$107.49	$118.31	$129.07

A reference to the preceding study indicates that for the period studied Engineers Public Service Company, in respect to Times All Charges & Preferred Dividends Earned, was inferior to all five comparative companies for the years 1940 and 1941. In 1942, Engineers was inferior to four of the companies studied. In 1943, Engineers, in respect to Times All Charges & Preferred Dividends Earned, was superior to two of the comparative companies and inferior to three. In 1944, however, Engineers Public Service Company was superior to all companies studied, with the exception of Pacific Public Service, and closely approximated the record of that company. It may be said that for the years 1943 and 1944, years which fully reflected divestment of the Company's interest in its non-productive subsidiary, Puget Sound Power & Light, the Company's record (on average) exceeded that of the five comparative companies studied.

On the basis of its capital structure, Engineers Public Service Company shows a somewhat heavier proportion of Prior Obligations to Total Capitalization than do the five companies studied for comparative purposes.

In respect to the Book Value of Equity Per Share of Preferred, Engineers Public Service Company in 1942 showed a higher coverage than two of the companies, approximately the same coverage as Wisconsin Electric

Preferred Stockholders' Exhibit No. 29 (Cont'd)

Power, and coverage below that of Columbia Gas & Electric and Niagara Hudson Power. In the years 1943 and 1944, Engineers' Book Value of Equity Per Share of Preferred exceeded that of two of the companies studied and was inferior to that of three of the companies.

In respect to the per cent of Net Quick to Prior Obligations, Engineers was superior to only one of the companies in the years 1942 and 1944, whereas in 1943 Engineers was superior to two of the companies.

In respect to Times Parent Company Dividends were Earned, Engineers Public Service Company, in the year 1942, was superior to only one of the five comparatives; in the year 1943 Engineers was superior to three of the Companies; whereas in the year 1944 Engineers was superior to all five companies studied for comparative purposes. On a combined basis, it may be said that Engineers Public Service Company, particularly in the years 1943 and 1944, ranged, as far as investment risk is concerned, in a medium or average position as compared to the five companies studied.

The preferred stocks of the five companies studied averaged to yield between a 4.37 basis and a 4.91 basis. These yields, it will be noted, are substantially in excess of the yields previously referred to in respect to high-grade preferred stocks. The Preferred stock of Engineers Public Service Company, as well as the preferred stocks of the five public utility holding companies, studied for comparative purposes, must be classed as medium-grade preferred stocks, and should, therefore, sell at yields higher than the yields registered by the high-grade preferred stocks.

If the current yields at which the preferred stocks of the five public utility holding companies are selling are used for the purpose of capitalizing the stated dividend rates on Engineers Public Service Company Preferred stocks and if the values so obtained were to be averaged, the average value of the $5 Cumulative Preferred would be $107.49 a

Preferred Stockholders' Exhibit No. 29 (Cont'd)

share, the average value of the $5.50 Cumulative Preferred stock would be $118.31 a share, and the $6 Cumulative Preferred stock would have an average per share value of $129.07. These prices, of course, are without reference to the call prices at which these stocks can be called. This study indicates that if Engineers Public Service Company were to continue in business its several classes of preferred stock would have a current fair investment value equal to or in excess of the call prices of these stocks.

I made a further study in which I selected from a wide list of electric and power company preferred stocks those stocks having charge coverage on an over-all basis between approximately 1.25 to a 1.75 basis, and excluded stocks whose stated dividend rate, in conjunction with call prices, would make such stocks improper for comparative purposes, with the following results.

Preferred Stockholders' Exhibit No. 29 (Cont'd)

The ten preferred stocks referred to in the preceding study averaged to earn All Charges & Preferred Dividends 1.49 times in the year 1943, as against a coverage of 1.40 times for Engineers Public Service Company. In the year 1944 the ten stocks averaged to earn Over-All Charges 1.48 times, as against similar coverage for Engineers Public Service Company of 1.65 times. The ten companies whose stocks are included in this study embrace both holding companies and operating companies.

The ten preferred stocks, above referred to, showed coverage in respect to preferred dividends only of 2.52 times in 1943, as against a similar figure of 2.48 for Engineers Public Service Company. In the year 1944, however, the ten stocks showed an average coverage in respect to preferred dividends alone of 2.46, as against a similar coverage of 3.20 for Engineers Public Service Company.

The various preferred stocks embodied in this study averaged to sell at prices to yield between a 4.1 basis and a 5.4 basis, the average yield for the ten preferred stocks being 4.5%. If this yield is applied to the several classes of Preferred Stock of Engineers Public Service Company, we have corresponding values of $111.11 for the $5 Cumulative Preferred series, $122.22 for the $5.50 Cumulative Preferred series, and $133.33 for the $6 Cumulative Preferred series.

Special Analysis Re Virginia Electric & Power Company:

The following table shows the Gross Income of Virginia Electric & Power Company on the basis of combined operations of Virginia Electric Power Company and Virginia Public Service Company (merged into Virginia Electric & Power Company on May 25, 1944) and their subsidiaries, after intercompany eliminations, together with earnings for the year 1945 (with the last two months estimated), and earnings for the year 1946 estimated.

Preferred Stockholders' Exhibit No. 29 (Cont'd)

In respect to the preceding table, attention should be called to the fact that the terms of the Indenture under which Series "E" 2¾% Bonds of 1975 were issued, limitations are placed in respect to dividend payments as follows:

> The Company covenants not to pay any cash dividends on its common stock, or retire any such stock except from proceeds of sale of other shares, if total amount so applied after September 30, 1942 (exclusive of dividends paid prior to January 1, 1944), plus $55,000 a month for first 37 months after September 30, 1943, and $75,000 a month for first 120 months after May, 1944, would exceed net income available for common dividends (as defined), accumulated after September 30, 1943.

I have reduced this covenant to dollar amounts and have inserted these amounts to the years 1943, 1944, 1945 and 1946, above. These freeze requirements in no way divert earnings to the detriment of the Preferred stockholders of Engineers Public Service Company, but, rather, provide that specific earnings shall be retained or used for retirement of underlying debt. Retention of earnings through the operation of the freeze covenant, therefore, results in a constant improving in the investment status of Engineers' Preferred stocks. Furthermore, an examination of the relationship between balance available for common and freeze requirements indicates that the freeze requirments do not impinge on Virginia's dividend-paying capacity to a point which seriously threatens Preferred dividend payments on the several classes of Preferred stock of Engineers Public Service Company.

I made a further study to determine the investment status of the Preferred stock of Engineers Public Service Company, on the assumption that El Paso stock was distributed as contemplated in the present Plan and Amendments; on the further assumption that Gulf States stock was to be reclassified and sold in accordance with the

Preferred Stockholders' Exhibit No. 29 (Cont'd)

present provision and Plan and Amendments; and on the further assumption that proceeds from the sale of Gulf States, together with $10,000,000 of presently available cash, is to be used to call outstanding Preferred stock of Engineers Public Service Company to the extent that such cash would enable the calling of this stock at call prices.

$6.00 " " "	65,098(1)	110(1)	7,160,780	390,588

(1) Plan 9/10/45, Page 4.

Proceeds from sale of 1,909,968 shs. Gulf States @ $11.50 per sh.		$21,964,632
Plus $10,000,000 Available Cash		10,000,000
Total		$31,964,632
Used to Call All $6.00 Pfd. Total Requirements	$ 7,160,780	
" " " $5.50 " " "	20,174,660	
		$27,335,440
Amount $5.00 stock to be called		$ 4,629,192
Balance		$10,485,663
# Shares @ $105 Per Share—Uncalled		99,863
Annual Requirements thereon		$ 499,315

On the basis of the preceding assumptions, it will be seen that Preferred dividend requirements on Engineers Public Service Company stock would be reduced from a present figure of $2,119,076 to $499,315 annually, an amount which would be well within the capacity of Engineers Public Service Company to pay (1) if it were to continue as a holding company owning only Virginia Electric & Power Company, or (2) if Engineers Public Service Company and Virginia Electric & Power Company were merged. Adequate funds would be available from Virginia Electric & Power Company to meet these requirements whether or not the freeze requirements previously mentioned were to be deducted from the balance available from common.

Preferred Stockholders' Exhibit No. 29 (Cont'd)

Conclusions:

It is my conclusion that the several classes of Preferred stock of Engineers Public Service Company have fair investment values, on the assumption that Engineers Public Service Company is to continue in business, as follows:

$5.00 Convertible Dividend Preferred—$106.25,
$5.50 Cumulative Dividend Preferred—$111.38,
$6.00 Cumulative Dividend Preferred—$111.50.

These values are equivalent to the full call price for the stocks plus three month's cumulative dividends. The values so arrived at are predicated on the assumption that in the event no call features were present, the stocks would have fair investment values substantially in excess of the values here set forth. In fact, absent the right to call said stocks, it is my opinion that the $5 series would be worth $108.70, the $5.50 series would be worth $119.57, and the $6.00 series would be worth $130.33. These figures are predicated on my belief that a rate of 4.6% should be used to capitalize the dividends to which these stocks are entitled, in view of the investment characteristics of the Company on the one hand, and in view of conditions in the money market on the other hand.

It is my further opinion that these several classes of Preferred stocks would have the same values whether Engineers Public Service Company continues in its present form, whether Engineers Public Service Company divests itself of El Paso and Gulf States (under Plan of September 10, 1945) and either continues with Virginia Electric & Power Company as it sole subsidiary, or whether Engineers and Virginia are merged.

January 24, 1946

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

REPORT ON VALUATION OF $5 DIVIDEND CONVERTIBLE PREFERRED STOCK, $5.50 & $6 CUMULATIVE DIVIDEND PREFERRED STOCKS

ENGINEERS PUBLIC SERVICE COMPANY, INC. (A DELAWARE CORPORATION)

AS AT JANUARY 15, 1946

Purpose:

The purpose of this report is to determine the fair investment value of the $5 Dividend Convertible Preferred Stock, $5.50 and $6 Cumulative Dividend Preferred Stock of Engineers Public Service Company, Inc., a Delaware Corporation, as at January 15, 1946.

The three classes of preferred stock of Engineers Public Service Company, Inc. are equally secured in respect to earnings and assets. The conversion privilege in respect to the $5 Convertible Preferred Stock expired June 30, 1938. This feature, therefore, is no longer operative. All classes of preferred stock are entitled to receive par and accrued dividends in the event of involuntary dissolution or liquidation of the Company. All classes of preferred stock are callable—the $5 Preferred stock, presently at $105; the $5.50 and $6 Preferred stock at $110 and accrued dividends. In the event of voluntary liquidation or dissolution of the Company, all three classes of stock are entitled to receive amounts equivalent to their call prices, plus accrued dividends to the date of call.

Engineers Public Service Company, Inc. is a holding company, incorporated in the State of Delaware in 1925. The System, at the time the Public Utility Holding Company Act of 1935 was passed, comprised Virginia Electric &

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

Power Company, Eastern Texas Electric Company, Gulf States Utilities Company, El Paso Electric Company (Delaware), El Paso Electric Company (Texas), El Paso & Juarez Traction Company, Mesilla Valley Electric Company, Baton Rouge Electric Company, Louisiana Steam Generating Corporation, Puget Sound Power & Light Company and Subsidiaries, Savannah Electric & Power Company, The Western Public Service Company, Missouri Service Company, The Northern Kansas Power Company, The Key West Electric Company, and Ponce Electric Company. Engineers also owned securities of El Paso Natural Gas Company and held an option to acquire common stock of that company, which option was later exercised. (See Testimony of R. N. Benjamin, page 20, Transcript of Record.)

Corrected, Transcript p. 1404

Since the passage of the Public Utility Holding Company Act, various properties formerly owned by Engineers Public Service Company were either sold or consolidated (Virginia Public Service Company was merged with Virginia Electric & Power Company in 1944), with the result that at January 15, 1945 the System consisted of three operating subsidiaries, to wit:

(1) Virginia Electric & Power Company, a Virginia corporation, engaged in the business of generating and purchasing electric energy and transmitting, distributing, and selling the same at retail and wholesale in parts of Virginia, northeastern North Carolina, and east central West Virginia, comprising approximately 29,700 square miles. The company conducts a manufactured gas business in Norfolk, South Norfolk, Newport News, Hampton, Virginia and vicinity. Its total gross revenue aggregates approximately $40,000,000 annually, 93% being derived from electric operations.

(2) Gulf States Utilities Company, which company is engaged in the business of generating and purchasing electric energy and transmitting, distributing, and selling the

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

same at retail and wholesale in an area in western Texas, and south central Louisiana, comprising approximately 27,500 square miles. Steam is supplied to certain large industrial customers in Baton Rouge and natural gas is purchased at wholesale and distributed at retail in Baton Rouge, Louisiana and vicinity. Company supplies water in six communities with an estimated population of 108,000, and manufactures and distributes ice in five communities. Total gross revenues approximate $18,000,000, of which 91.7% is derived from electric and steam operations, 4.9% from gas operations, the balance from water and ice operations.

(3) El Paso Electric Company. This company is engaged in the business of generating and purchasing electric energy, transmitting, distributing, and selling the same at retail and wholesale in El Paso, Texas and in an area in the Rio Grande Valley in Texas and New Mexico approximately 100 miles northwesterly from El Paso to the Caballo Dam in New Mexico and approximately the same distance southwesterly from El Paso to Van Horn, Texas. The company sells electric energy at retail in fourteen communities in Texas and twenty communities in New Mexico, together with the surrounding rural districts which have an estimated combined population of 170,400, of which 118,000 reside in El Paso. Energy is supplied at wholesale to Compania Productura DeLuze y Fuerza, S. A. for resale in the city of Juarez, Mexico. Total gross revenues are approximately $4,000,000 annually.

It is unnecessary, at this juncture, to discuss at length the history of the various relationships between the Securities & Exchange Commission and Engineers Public Service Company with reference to efforts of the Commission to bring about a compliance on the part of the Company with the requirements of the Public Utility Holding Company Act of 1935. It is sufficient at this point to state that Engineers Public Service Company had, prior to September 13, 1945, divested itself of a number of its properties, had effected various mergers, and had simplified its corporate

Corrected, Tr. p. 1404

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

structure to the point of owning the three previously described systems.

The Company, at September 10, 1945, was under orders to determine whether it would elect to retain Virginia Electric & Power Company as its principal operating system and dispose of Gulf States Utilities Company and El Paso Electric Company, or to maintain Gulf States Utilities Company and possibly El Paso Electric Company, which choice would require divesting itself of Virginia Electric & Power Company. In the event that the Company chose to maintain Virginia Electric & Power Company, it might continue in existence as a holding company or merge with Virginia Electric & Power Company.

On September 10, 1945, the Company filed a plan pursuant to Section 11 (e) of the Public Utility Holding Company Act of 1935 for divestment of assets and related matters. At subsequent times, four Amendments were filed to said Plan.

In brief, the Plan and Amendments provide (1) for increasing the common stock of El Paso Electric Company from 150,000 authorized common shares to 381,994 common shares, and the distribution of said shares to holders of Engineers common stock on the basis of one share of El Paso Electric for each five shares of Engineers' held. Scrip is to be issued in lieu of fractional shares; (2) that the common shares of Gulf States be increased from 280,000 to 1,909,968 common shares without par value; (3) that the holders of Engineers' common be issued warrants entitling such holders to purchase one share of Gulf States common at $11.50 a share for each share of Engineers' common held (Provision was made in the case of the common stockholders owning both preferred and common stock for such holders to make payment for their subscription to Gulf States common by the use of Engineers' Preferred stock, any class, at $100 a share); (4) the cash received from the sale of Gulf States, plus cash presently available in the treasury of Engineers, plus proposed bank borrowings of

$3,000,000 would be used to pay off all classes of Engineers Public Service Company Preferred stock at $100 a share; and (5) Engineers would then be liquidated and dissolved, its remaining liabilities disposed of, and the common stock of Virginia Electric & Power Company, together with its remaining assets, distributed pro rata to Engineers' common stockholders.

The Plan, as set forth above, and as adopted by the Board of Directors, was subject to the dissent by one Mr. Thomas W. Streeter, who is a Director of Engineers Public Service Company. Mr. Streeter's objection involves, among other things, the legal question as to whether or not the Plan, as above described, constitutes, in respect to the liquidation of Engineers Public Service Company, a voluntary or an involuntary liquidation. In addition to the legal question as to whether or not the Plan constitutes a voluntary or involuntary dissolution, the question as to the fair investment value of the several classes of Preferred stock of Engineers Public Service Company arises.

Deletion, Tr. pp. 1404, 1727, 1728

It is my purpose, therefore, in the following report to appraise the fair investment value of the three classes of Preferred stock of Engineers Public Service Company without regard to its proposal to liquidate, either voluntarily or involuntarily, in order to meet the requirements of Section 11 of the Act.

"Fair investment value" may be defined as the price or value at which the shares of the several classes of stock would exchange hands between willing buyers and willing sellers, neither under compulsion to buy or to sell and both thoroughly informed of all of the various elements of values.

The fair investment value of the several classes of Preferred stock of Engineers Public Service Company, which I expect to arrive at, therefore, will be predicated upon the assumption that Engineers Public Service Company shall continue in operation as presently constituted.

Deletion, pp. 1404, 1405, 1727, 1728

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

Basis of Valuation

Although the several classes of Preferred stock of Engineers Public Service Company are bought and sold on the New York Stock Exchange, the reported prices at the present time can not be regarded as representative of fair investment value. The range on the three classes of Engineers' Preferred stock, for the week ended January 5, 1946, was as follows:

	High	Low	Average
$5.00 Series	$106.00	$105.00	$105.50
$5.50 "	107.00	105.00	106.00
$6.00 "	108.00	106.50	107.25

These prices, in addition to reflecting the ordinary market factors such as money rates and matters of investment risk, also reflect at the present time two collateral factors, namely, possible dissolution either voluntary or involuntary, under provisions of Section 11 of the Public Utility Holding Company Act, as well as the Plan with its several Amendments filed September 10, 1945, which provides for eventual dissolution of Engineers Public Service Company *and the payment of $100 per share and accrued dividends* for its several classes of Preferred stock.

Preferred stocks enjoy a claim in respect to the earnings of the corporation, prior to the claim of the common stockholder but a claim which is limited to the amount of the stated dividend. In the case of Cumulative Preferred stocks, any unpaid dividends remain as contingent charges against the corporation and must be paid before dividends may be paid on the common stock. Except insofar as a preferred stock may be callable at a specific price, preferred stocks are in the nature of perpetual annuities, and should be valued by capitalizing their dividend rates at rates of capitalization which give full weight to inherent investment risk and money rates at the date of valuation.

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

In the case of Callable Preferred stock, however, there is an upper limit placed upon values, since the issuing corporation reserves the right to call such stocks at stated prices upon relatively short notice. Callable Preferred stocks, therefore, do not as a rule sell substantially in excess of their call prices and the amount by which market prices sometimes exceed call prices is represented by an estimate of the probability, or lack of probability, that the stock will be called in the immediate future.

In valuing the several classes of Preferred stock of Engineers Public Service Company, *as a going concern*, I propose to show that the fair investment value of these several classes of Preferred stock would be, under present conditions, substantially in excess of their call prices, were it not for the fact that each of these classes of stocks is callable at a stated price or premium, and that their present fair investment values are represented by their call prices plus a slight premium to account for the time required to effect a call.

Economic conditions and money rates—January, 1946:

It is unnecessary, at this juncture, to go into a lengthy discussion of our banking structure nor to discuss the various repercussions which have followed the huge increases in our Federal debt and bank deposits, stemming from World War II. It is sufficient to state here that the effect of Government financing, as carried on during the past several years, has been (1) substantially to increase deposit currency in circulation, (2) substantially to increase actual money in circulation, and (3) to increase the dollar value of high-grade bonds and preferred stocks with a concomitant reduction in the yields thereon. These tendencies were prevalent in 1932 but have been greatly aggravated as a result of changes which took place from 1939 to date. The following table indicates clearly the history of interest rates during the period 1932 to date.

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

Correction Tr. p. 1535

(1) Data through 1942 taken from U. S. Statistical Abstract, 1943, pp. 374; thereafter, Standard Statistics Average.
(2) Standard Statistics Average, High-Grade Corporate Bonds.
(3) Standard Statistics Average.

An examination of the preceding tabulation indicates clearly the low levels to which interest rates and, correspondingly, the low level to which the rates on preferred stocks have gone during the past several years. The yields on high-grade preferred stocks, which in the early 'Thirties ranged from 4½% to 6%, have dropped to a current level of 3.65%. High-grade corporate bond yields have dropped from a level of over 5% to 2.67%. The yields on high-grade public utility preferred stocks have closely followed this trend. I refer to Pacific Gas & Electric, Non-Callable, 6% Preferred stock having a Par Value of $25.00. This stock averaged to sell in the month of December, 1945, at $43.00, which would give it a yield of 3.49%. Buffalo Niagara Electric Corporation recently brought out a 3.6% Preferred stock for sale to the public at approximately $102.8, or at a yield of 3.50%. Many other examples of similar nature might be given. In other words, high-grade public utility preferred stocks have closely followed the general average of all high-grade preferred stocks.

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

It does not require an exhaustive presentation of statistics to show that the yields on preferred stocks are, at the present time, the lowest which they have ever been in the history of our country, or, conversely, that the prices of such stocks are at the highest levels ever experienced. The permanency of this situation will depend on the permanency of low interest rates. In this connection I would like to quote from the Federal Reserve Bulletin of November, 1945, page 1099, as follows: "In view of the existing sources of demand for Government securities and the reduced supply of new securities, prospects are for a continued strong market for these securities. Under the circumstances, demands are particularly strong for the intermediate and long-term issues bearing the higher yields. Such of these issues as can be held by banks will be in demand by banks, while non-bank investors may be expected to buy principally the issues that are not eligible for purchase by banks." This statement appeared in an unsigned article which indicates, in accordance with the stated policy of the Editorial Committee, that said Committee, representing the Board of Governors of the Federal Reserve System, are responsible for interpretations and opinions expressed therein.

The Honorable Secretary of the Treasury, Mr. Vinson, has, on numerous occasions, expressed his confidence in the permanency of present low rates of interest. The Federal Government, with its present huge debt, a substantial portion of which comes due in less than five years, is vitally interested in the maintenance of low interest rates. There are few people today who are of the opinion that any substantial rise in interest rates is likely to take place in the reasonably near future. High-grade preferred stock prices may, therefore, be anticipated to remain at high levels and the yields on high-grade preferred stocks at current low levels for a considerable period of time to come. It may, therefore, be stated that the present level of preferred stock

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

prices is, as far as one can humanly predict, a permanent level.

The market action of high-grade bonds or preferred stocks does not fluctuate as widely or as erratically as does the market for common stocks; nor do we find, in respect to preferred stocks, prices fluctuating widely because of temporary and speculative conditions. The prices of preferred stocks today are predicated on fundamental conditions prevailing in the money markets, conditions which are of a permanent nature.

The values which I propose to place on the several classes of Preferred stock of Engineers Public Service Company are, therefore, values of a permanent nature and are not values of a temporary or speculative nature, as far as one can reasonably predict at the present time.

Addition, Tr. p. 1436

I have examined at some length the history of Engineers Public Service Company as set forth in various exhibits already received in this case, as set forth in various releases of the Securities & Exchange Commission, and as discussed in the testimony of the officials of the Company in the present matter. I have also examined the records in respect to the Company's properties, the Company's business, the management of the Company, the asset position of the Company (as disclosed by its various statements), the earnings and dividend record of the Company, and other pertinent data having a bearing on the value of Engineers Public Service Company Preferred stock.

Earnings Analysis:

I present herewith an Income Account analysis on a Consolidated Basis for Engineers Public Service Company for the period 1940 through 1945, inclusive.

(1) Does not give effect to reduction in Federal Income and Excess Profits Taxes resulting from extraordinary non-recurring deductions. If such items were used to reduce taxes accordingly, (as set forth in Applicant's Exhibits 53 and 66) over-all coverage would be 2.12.

(2) Holding Company expenses not segregated. $893,800 represents amortization of plant acquisition adjustments.

Data for years 1940—1944, inclusive, taken from Applicant's Exhibits 37-P through 37-T. 1945 data from Exhibit 63, page 2.

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

An Examination of this data indicates that, during the period under consideration, there was a continuous improvement in the Times Charges and Preferred Dividends Earned (i.e., over-all charges), with the exception of the year 1945. In the year 1940, all Charges and Preferred Dividends, on a Consolidated Basis, were earned 1.22 times. This figure increased gradually until all Charges and Preferred Dividends were earned, in the year 1944, 1.54 times. In the year 1945, all Charges and Preferred Dividends were earned 1.47 times, provided no effect is given to the reduction in Federal Income and Excess Profits Taxes in that year, resulting from extraordinary non-recurring deductions. If such items were used to reduce taxes accordingly, over-all coverage would have been 2.12 times.

Operating ratios, on a Consolidated Basis, amounted to 65.07% in 1940, dropped to 62.30% in 1942, gradually dropped to 59.93% in 1943, increased to 62.10% in 1944, and dropped to 60.32% in 1945. The Company's appropriation for Depreciation and Maintenance averaged between 17.8% of Gross in the year 1940 to 13.8% in 1945.

I present herewith an Analysis of Income Data relative to Engineers Public Service Company, for the years 1940 through 1945, inclusive, showing the Times Parent Company Preferred Dividends were earned.

x Preferred Dividends Earned	2.34	2.07	1.81	2.48	3.20	2.77(1)

*Less earnings of a subsidiary in excess of preferred dividend requirements, (less minority interest) credited to Reserve for Depreciation in value investment ($459,451.54).

(1) Does not give effect to reduction in Federal Income and Excess Profits Taxes resulting from extraordinary and non-recurring deductions. If such items were used to reduce taxes accordingly, (using data in Applicant's Exhiibts 53 and 66) Parent Company Preferred dividends would have been earned 4.75 times.

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

Data for the years 1940-1944, inclusive, taken from Applicant's Exhibits 37-P through 37-T. Data for 1945 was taken from Page 2 of Applicant's Exhibit 63.

An examination of the preceding tabulation indicates that Preferred Dividend requirements of the Parent Company, based on balance of earnings available for Engineers Public Service Company, were covered between 1.81 times and 3.2 times for the period studied. For the year 1945, Parent Company Preferred Dividend requirements were covered 2.77 times, if no effect is given to reduction in Federal Income and Excess Profits Taxes resulting from extraordinary or non-recurring deduction. If such items were used to reduce taxes accordingly, the Parent Company's Preferred Dividends would have been earned 4.75 times.

The following tabulation shows Estimated Earnings of Engineers Public Service Company and Subsidiaries for the year 1946, on the assumption that no change is made in respect to properties operated during the year 1946.

ESTIMATED EARNINGS—1946

ENGINEERS PUBLIC SERVICE COMPANY, INC. & SUBSIDIARIES

(Data Taken from Applicant's Exhibit 63, Page 5)

	Virginia	Gulf States	El Paso	Combined	Engineers Public Service	Inter-Company Eliminations	Consolidated

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

It will be seen from this study that Over-all Charges in the year 1946 will be earned 1.67 times and that Parent Company Preferred Dividends alone will be earned 3.39 times.

This estimate of 1946 earnings indicates a continuation of the improvement in earnings shown for the 1940-1945 period, as coverage, both in respect to over-all charges and Parent Company preferred dividends, is estimated to be higher in the year 1946 than in any of the years 1940 through 1945.

The public utility industry has for many years been characterized by stability and by a strong growth trend. There are no peculiar economic characteristics in respect to the territories served by the present subsidiaries of Engineers Public Service Company which would indicate that the earnings trend of these companies would go counter to that of the industry. It is a reasonable assumption, therefore, that this Company should continue in future years to register progress along with other units in the industry.

Balance Sheet Data

I present herewith consolidated Balance Sheet Data for Engineers Public Service Company and Subsidiaries, for the years 1942 through 1944, inclusive.

CONSOLIDATED BALANCE SHEET—SUMMARY ANALYSIS
ENGINEERS PUBLIC SERVICE COMPANY, INC.
1942-1944, INCLUSIVE

	1942	1943	1944
Subs. Debt & Notes	$148,981,500.00	$ 87,755,000.00	$117,224,471.19
Subs. Pfd. Stock, Premium & Accrued Dividends	88,751,368.66	34,672,337.97	45,175,063.00
Minority Interests	291,644.31	72,835.54	50,917.24
Total Preceding Claims	$238,024,512.97	$122,500,173.51	$162,450,451.43
Engineers' Preferred	$ 41,801,500.00	$ 41,801,500.00	$ 39,245,500.00
Common Stock	$ 1,909,968.00	$ 1,909,968.00	$ 1,909,968.00
Reserves	14,352,830.17	4,350,470.62	4,394,705.20
Capital Surplus	24,877,635.14	19,661,145.94	18,843,978.80
Earned Surplus	11,382,848.41	12,701,846.14	11,157,691.09
Total Common & Surplus	$ 52,523,281.72	$ 38,623,430.70	$ 36,306,343.09
Total Investment	$332,349,294.69	$202,925,104.21	$238,002,294.52
Book Value Equity Per Sh. Pfd.	$225.65	$192.40	$192.50
Net Quick Assets	$ 14,491,331.00	$ 14,579,270.00	$ 17,146,619.00
% Net Quick: Prior Obligations	6.09	11.90	10.55
% Prior Oblig.: Total Capital	71.62	60.37	68.26
% Pfd. & Subord. Items: Total Cap.	28.38	39.63	31.74

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

At December 31, 1944, Engineers Public Service Company showed a book value of equity in the amount of $192.50 for each share of preferred stock. Net Quick Assets amounted to $17,147,000, or the equivalent of 10.55% of Obligations prior to aggregate Preferred Stock. Obligations prior to Parent Company's Preferred stock amounted to 68.26% of total capitalization, whereas preferred stock of the Parent Company and subordinate capital items represented 31.74% of total capitalization.

I made another calculation in respect to the Corporate Balance Sheet of Engineers Public Service Company in which study I determined the values of Engineers' investments in the common stocks of subsidiaries by capitalizing 2 year average earnings of the major subsidiaries held by Engineers, at December 31, 1944, on the assumption that the equities in these companies were worth 15 times 2 year average earnings.

Applicant's Exhibit 14 presents a study of the Price: Earnings Ratios of the common stocks of four companies, to wit: Houston Lighting and Power, Idaho Power, Indianapolis Power & Light Company, and Tampa Electric Company. At October 6, 1945, these stocks averaged to sell at 14.44 times average per share earnings for the period 1938-1941, inclusive; 16.04 times yearly average earnings for the period 1942-1944, inclusive, plus 12 months ended June 30, 1945; 15.20 times yearly average earnings for the period 1938-1944, inclusive, plus 12 months ended June 30, 1945; 15.58 times per share earnings for the year 1944; and 14.90 times 12 month's earnings ended June 30, 1945.

Pfd. Stockholders' Ex. 30 in evidence, Tr. p. 1721

In this connection I would also like to refer to Appendix "A" of a report which I prepared in connection with the Valuation of the Preferred Stock of American Light & Traction Company, which report is on file with the Securities & Exchange Commission. At May, 1945, the study contained in the Appendix referred to indicated that 13 electric and gas companies' common stocks averaged to sell

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

at 15.85 times 5 year average earnings, for the period 1940-44, inclusive.

A reconstruction of the Comparative Balance Sheet of Engineers Public Service Company (Parent Company only), appearing on page 17, Applicant's Exhibit 37-T, using reconstructed value of subsidiary common stocks by the use of a multiple of 15 times applied to 2 year average earnings, eliminating Reserve for Depreciation in the value of investments and taking other items at Book Values, indicates Net Assets Available for Preferred stock of Engineers Public Service Company in the amount of $104,267,911, or at the rate of $265.68 per $100 of Preferred stock. It should be further stated, in respect to this item, that this figure represents in substance the readily marketable value of assets available as security for the Preferred stock of Engineers Public Service Company, since the common stocks of any or all of the subsidiaries held could, at the date covered by the statement, have been sold at prices approximating the figures set forth in this study. Subsequent to December 31, 1944, certain of the properties have been sold.

Correction, Tr. pp. 1533, 1535, 1728, 1729

In respect to the value set forth in the preceding study, I would like to call attention that on Page 6 of the Securities & Exchange Commission's Release, #5499, is stated Engineers' investment in El Paso was set up at $6,598,539.

I would like further to refer to Page 163 of R. N. Benjamin's Testimony, Transcript of Record, 163, in which he states that on December 3, 1945 Engineers had received five bids for either the purchase of the capital stock or the assets of Western Public Service Company, and that the Board of Directors, at a meeting held that day, authorized the acceptance of a bid which would produce $843,000 for the capital stock of Western Public Service Company, plus $508,800 in payment of a Demand Note owing to Engineers Public Service Company from Western Public Service Company, and certain additional adjustments for net current assets, bringing the aggregate amount of cash to be received up to approximately $1,500,000. If the Demand Note is eliminated from the above figure, the amount applicable to the common stock from this sale would be approximately $1,000,000.

Correction, Tr. p. 1405

Applicant's Exhibit 14 shows the current valuation of Gulf States Utilities Company, on the basis of comparative studies, to be $29,981,000.

On page 6 of Applicant's Exhibit 37-T, it is stated that on April 25, 1945 Engineers Public Service Company sold to Donner Estates, Inc. all of the securities of the Savannah Electric and Power Company for $3,387,500, as against the Company's Carried value for said securities of $3,165,965.

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

Dividend Record:

The dividend record of Engineers Public Service Company, in respect to its several classes of Preferred stock, has been as follows:

(1) $5 Cumulative Preferred, No Par: Initial dividend of $1.25 per share paid October 1, 1928. Regular dividends paid quarterly, January 1, etc. to July 1, 1933, inclusive; none thereafter to August 1, 1936, when $4 was paid on account of arrears; November 2, 1946, $6.00; 1937, $8.75; January 3, 1938, $1.25 regular and $2.50 on arrears, clearing all arrears. Regular dividends paid thereafter, quarterly January 1, etc. to stock of record about December 14, etc.

(2) $5.50 Cumulative Preferred, No Par: Initial dividend of $1.375 per share paid January 2, 1929. Regular dividends paid quarterly, January 1, etc. to stock of record about December 17, etc., to July 1, 1933, inclusive; none thereafter to August 1, 1936, when $4.40 was paid on account of arrears; November 2, 1936, $6.60; 1937, $9.625; January 3, 1938, $1.375 regular and $2.75 on arrears, clearing up all arrears. Regular dividends paid quarterly thereafter, January 1, etc., to stock of record about December 14, etc.

(3) $6 Cumulative Preferred, No Par: Initial dividend of $1.50 per share paid January 2, 1931. Regular quarterly dividends paid January 1, etc. to stock of record about December 17, etc. to July 1, 1933, inclusive; none thereafter to August 1, 1936, when $4.80 was paid on account of arrears, clearing up arrears. Regular dividends paid quarterly thereafter, January 1, etc., to stock of record about December 14, etc.

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

The Company maintained regular dividend payments on its several classes of Preferred stock from date of issuance until July, 1933, at which time dividends on all classes of stock were temporarily discontinued. Dividend payments were resumed on August of 1937 and by January of 1938 all arrearages had been cleared. Since that time, dividends have been paid with regularity and the present financial condition of the Company indicates continued ability of the Company promptly to meet dividend requirements on all classes of preferred stock.

Comparative Study—Five Public Utility Holding Companies:

I present herewith a comparative study showing the preferred dividend coverages and certain balance sheet ratios, as well as current prices and dividend yields in respect to the preferred stocks of five public utility holding companies which are similar in many respects to Engineers Public Service Company.

(Study on following page.)

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

CORRESPONDING PRICE FOR

ENGINEERS PUBLIC SERVICE COMPANY, INC.

PREFERRED STOCKS

Based on ratio of	$5 Pfd.	$5.50 Pfd.	$6 Pfd.
Columbia Gas & Electric	$105.49	$116.03	$126.58
Niagara Hudson Power	102.75	112.94	123.20
Pacific Public Service	101.83	112.02	122.20
Public Service of N. J.	114.00	125.86	137.30
Wisconsin Electric Power	113.37	124.71	136.05
Average	$107.49	$118.31	$129.07

A reference to the preceding study indicates that for the period studied Engineers Public Service Company, in respect to Times All Charges & Preferred Dividends Earned, was inferior to all five comparative companies for the years 1940 and 1941. In 1942, Engineers was inferior to four of the companies studied. In 1943, Engineers, in respect to Times All Charges & Preferred Dividends Earned, was superior to two of the comparative companies and inferior to three. In 1944, however, Engineers Public Service Company was superior to all companies studied, with the exception of Pacific Public Service, and closely approximated the record of that company. It may be said that for the years 1943 and 1944, years which fully reflected divestment of the Company's interest in its non-productive subsidiary, Puget Sound Power & Light, the Company's record (on average) exceeded that of the five comparative companies studied.

On the basis of its capital structure, Engineers Public Service Company shows a somewhat heavier proportion of Prior Obligations to Total Capitalization than do the five companies studied for comparative purposes.

In respect to the Book Value of Equity Per Share of Preferred, Engineers Public Service Company in 1942 showed a higher coverage than two of the companies, ap-

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

proximately the same coverage as Wisconsin Electric Power, and coverage below that of Columbia Gas & Electric and Niagara Hudson Power. In the years 1943 and 1944, Engineers' Book Value of Equity Per Share of Preferred exceeded that of two of the companies studied and was inferior to that of three of the companies.

In respect to the per cent of Net Quick to Prior Obligations, Engineers was superior to only one of the companies in the years 1942 and 1944, whereas in 1943 Engineers was superior to two of the companies.

In respect to Times Parent Company Dividends were Earned, Engineers Public Service Company, in the year 1942, was superior to only one of the five comparatives; in the year 1943 Engineers was superior to three of the companies; whereas in the year 1944 Engineers was superior to all five companies studied for comparative purposes. On a combined basis, it may be said that Engineers Public Service Company, particularly in the years 1943 and 1944, ranged, as far as investment risk is concerned, in a medium or average position as compared to the five companies studied.

The preferred stocks of the five companies studied averaged to yield between a 4.37 basis and a 4.91 basis. These yields, it will be noted, are substantially in excess of the yields previously referred to in respect to high-grade preferred stocks. The Preferred stock of Engineers Public Service Company, as well as the preferred stocks of the five public utility holding companies, studied for comparative purposes, must be classed as medium-grade preferred stocks, and should, therefore, sell at yields higher than the yields registered by the high-grade preferred stocks.

If the current yields at which the preferred stocks of the five public utility holding companies are selling are used for the purpose of capitalizing the stated dividend rates on Engineers Public Service Company Preferred stocks and if the values so obtained were to be averaged,

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

the average value of the $5 Cumulative Preferred would be $107.49 a share, the average value of the $5.50 Cumulative Preferred stock would be $118.31 a share, and the $6 Cumulative Preferred stock would have an average per share value of $129.07. These prices, of course, are without reference to the call prices at which these stocks can be called. This study indicates that if Engineers Public Service Company were to continue in business its several classes of preferred stock would have a current fair investment value equal to or in excess of the call prices of these stocks.

I made a further study in which I selected from a wide list of electric and power company preferred stocks those stocks having charge coverage on an over-all basis between approximately 1.25 to a 1.75 basis, and excluded stocks whose stated dividend rate, in conjunction with call prices, would make such stocks improper for comparative purposes, with the following results.

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

The ten preferred stocks referred to in the preceding study averaged to earn All Charges & Preferred Dividends 1.49 times in the year 1943, as against a coverage of 1.40 times for Engineers Public Service Company. In the year 1944 the ten stocks averaged to earn Over-all Charges 1.48 times, as against similar coverage for Engineers Public Service Company of 1.54 times. The ten companies whose stocks are included in this study embrace both holding companies and operating companies.

The ten preferred stocks, above referred to, showed coverage in respect to preferred dividends only of 2.52 times in 1943, as against a similar figure of 2.48 for Engineers Public Service Company. In the year 1944, however, the ten stocks showed an average coverage in respect to preferred dividends alone of 2.46, as against a similar coverage of 3.20 for Engineers Public Service Company.

The various preferred stocks embodied in this study averaged to sell at prices to yield between a 3.9 basis and a 5.4 basis, the average yield for the ten preferred stocks being 4.5%. If this yield is applied to the several classes of Preferred stock of Engineers Public Service Company, we have corresponding values of $111.11 for the $5 Cumulative Preferred series, $122.22 for the $5.50 Cumulative Preferred series, and $133.33 for the $6 Cumulative Preferred series.

Special analysis Re Virginia Electric & Power Company:

The following table shows the Gross Income of Virginia Electric & Power Company on the basis of combined operations of Virginia Electric Power Company and Virginia Public Service Company (merged into Virginia Electric & Power Company on May 25, 1944) and their subsidiaries, after intercompany eliminations, together with earnings for the year 1945 (with last 2 months estimated), and earnings for the year 1946 estimated.

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

In respect to the preceding table, attention should be called to the fact that the terms of the indenture under which Series "E" 2¾% Bonds of 1975 were issued, limitations are placed in respect to dividend payments as follows:

> The Company covenants not to pay any cash dividends on its common stock, or retire any such stock except from proceeds of sale of other shares, if total amount so applied after Sept. 30, 1943 (exclusive of dividends paid prior to Jan. 1, 1944), plus $55,000 a month for first 37 months after Sept. 30, 1943, and $75,000 a month for first 120 months after May, 1944, would exceed net income available for common dividends (as defined), accumulated after Sept. 30, 1943.

I have reduced this covenant to dollar amounts and have inserted these amounts to the years 1943, 1944, 1945 and 1946, above. These freeze requirements in no way divert earnings to the detriment of the Preferred stockholders of Engineers Public Service Company, but, rather, provide that specific earnings shall be retained or used for retirement of underlying debt. Retention of earnings through the operation of the freeze covenant, therefore, results in a constant improving in the investment status of Engineers' Preferred stocks. Furthermore, an examination of the relationship between balance available for common and freeze requirements indicates that the freeze requirements do not impinge on Virginia's dividend-paying capacity to a point which seriously threatens Preferred dividend payments on the several classes of Preferred stock of Engineers Public Service Company.

I made a further study to determine the investment status of the Preferred stock of Engineers Public Service Company, on the assumption that El Paso stock was distributed as contemplated in the present Plan and Amendments; on the further assumption that Gulf States stock was to be reclassified and sold in accordance with the pres-

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

ent provision and Plan and Amendments; and on the further assumption that proceeds from the sale of Gulf States, together with $10,000,000 of presently available cash, is to be used to call outstanding Preferred stock of Engineers Public Service Company to the extent that such cash would enable the calling of this stock at call prices.

ENGINEERS PUBLIC SERVICE COMPANY, INC.

OUTSTANDING PREFERRED STOCK

	Par Outstanding	Callable at	Total cash Req. to Call	Total Div. Requirements
$5.00 Cum. Conv. Pfd. Stock	143,951(1)	$105(1)	$15,114,855	$ 719,755
$5.50 Cumulative " "	183,406(1)	110(1)	20,174,660	1,008,733
$6.00 " " "	65,098(1)	110(1)	7,160,780	390,588

(1) Plan 9/10/45, p. 4

Proceeds from sale of 1,909,968 shs. Gulf States at $11.50 per sh.			$21,964,632
Plus $10,000,000 Available Cash			10,000,000
Total			$31,964,632
Used to Call All $6.00 Pfd. Total Requirements	$ 7,160,780		
" " " " $5.50 " " " "	20,174,660		
			$27,335,440
Amount $5.00 stock to be called			$ 4,629,192
Balance			$10,485,663
# Shares at $105 Per Share—Uncalled			99,863
Annual Requirements thereon			$ 499,315

On the basis of the preceding assumptions, it will be seen that Preferred dividend requirements on Engineers Public Service Company stock would be reduced from a present figure of $2,119,076 to $499,315 annually, an amount which would be well within the capacity of Engineers Public Service Company to pay (1) if it were to continue as a holding company owning only Virginia Electric & Power Company, or (2) if Engineers Public Service Company and Virginia Electric & Power Company were merged. Adequate funds would be available from Virginia Electric & Power Company to meet these requirements whether or not the freeze requirements previously mentioned were to be deducted from the balance available from common.

Preferred Stockholders' Exhibit No. 29-A (Cont'd)

Conclusions:

It is my conclusion that the several classes of Preferred stock of Engineers Public Service Company have fair investment values, on the assumption that Engineers Public Service Company is to continue in business, as follows:

$5.00 Convertible Dividend Preferred.....	$106.25
$5.50 Cumulative Dividend Preferred.....	$111.38
$6.00 Cumulative Dividend Preferred.....	$111.50

These values are equivalent to the full call price for the stocks plus three month's cumulative dividends. The values so arrived at are predicated on the assumption that in the event no call features were present, the stocks would have fair investment values substantially in excess of the values here set forth. In fact, absent the right to call said stocks, it is my opinion that the $5 series would be worth $108.70, the $5.50 series would be worth $119.57, and the $6.00 series would be worth $130.33. These figures are predicated on my belief that a rate of 4.6% should be used to capitalize the dividends to which these stocks are entitled, in view of the investment characteristics of the Company on the one hand, and in view of conditions in the money market on the other hand.

It is my further opinion that these several classes of Preferred stocks would have the same values whether Engineers Public Service Company continues in its present form, whether Engineers Public Service Company divests itself of El Paso and Gulf States (under Plan of September 10, 1945) and either continues with Virginia Electric & Power Company as its sole subsidiary, or whether Engineers and Virginia are merged.

SOME PEOPLE ARE NEVER SATISFIED—AND THAT GOES DOUBLE FOR US

A Few Remarks on the New S&P Super-Bond Guide

Whenever we change a service in any way, we always expect and get some squawks because there are always some people who want everything left exactly as it is.

We expected some squawks when we put out the new Bond Guide. We were not disappointed. But *the absolutely amazing thing—on the basis of past experience—IS HOW FEW SQUAWKS THERE WERE.*

A couple regretted that we had not added market ratings. Most commentators didn't seem to care. But a few passionate laments on a couple of points seem to cover all the protests of any importance. These, I'd like to review for you briefly because you'll be running into them.

PREFERRED STOCKS, ALSO QUALITY RATINGS ON PREFERREDS.

We've wanted to drop preferred stock quality ratings for years. A quality rating on a preferred doesn't mean very much, as in the case of a bond, for the simple reason that the two are entirely different types of investments.

We had an A rating on National Lead Preferred while it fluctuated all the way between 60 and 170. That doesn't make sense. A *market* rating there was of highest importance. But for anybody foolish enough to disregard market prospects, the one important thing was dividend coverage.

Preferred Stockholders' Exhibit No. 35 (Cont'd)

Well, the dividend was adequately covered during that tremendous fluctuation. And in a variable security, with no maturity date, that's the only quality feature that matters, while market performance and prospects are often of highest importance.

That paragraph explains why we moved preferreds over into the Stock Guide where they belong, and where we cover over 1,000 issues, and cover them properly, and why we abandoned meaningless quality ratings to induce investors to use safer tests with more meaning in judging the investment quality of preferreds.

Municipal Section. Why drop it?

It simply wasn't realistic to keep it. There are 125,000 or more taxing bodies with bond issuing power. Simply impossible to cover all of them! Simply impossible even to do a representative job. A better job for investors or banks or dealers is done in the Bond Outlook—newsy, intelligent, acute analysis.

Meanwhile, we had to choose: Should we cover municipals badly for a handful, or should we give *the biggest, best coverage of corporate bonds anywhere available,* as the big majority of our customers wanted us to do? We choose the latter. It was a wise choice.

Meanwhile, to show that our claim of a SUPER-Bond Guide is no empty boast, see the attached sheet with a list of features that prove our claim.

Philadelphia

HOLDING COMPANY ACT OF 1935
Release No. 4997

IN THE MATTER
of
ENGINEERS PUBLIC SERVICE COMPANY
File No. 70-867
(Public Utility Holding Company Act of 1935—Section 12 (c)

Findings and Opinion of the Commission.

REPURCHASE AND RETIREMENT OF SECURITIES BY REGISTERED HOLDING COMPANY

Holding company's declaration under Section 12 (c) of the Act and Rule U-42 promulgated thereunder requesting authority to spend not in excess of $4,000,000 in open market purchases of its own preferred stocks permitted to become effective subject to conditions.

APPEARANCES:

Carl H. Conley of New York; New York for Engineers Public Service Company.

Harlow B. Lester and *Bernard S. Kanton* for the Public Utilities Division of the Commission.

Commission's Exhibit No. 6 (Cont'd)

Engineers Public Service Company (Engineers), a registered holding company, has filed a declaration and amendments thereto pursuant to Section 12 (c) of the Public Utility Holding Company Act of 1935 and Rule U-42 promulgated thereunder regarding the expenditure of not more than $4,000,000 for the reacquisition of its presently outstanding preferred stocks by open market purchases or private purchase.[1] All preferred stock acquired is to be cancelled and retired.

A hearing has been held after appropriate notice. Briefs and oral argument have been waived. Having considered the record, the Commission makes the following findings:

CAPITALIZATION

Condensed corporate and consolidated balance sheets, actual and pro forma, of Engineers as at December 31, 1943, are annexed hereto as appendices A and B, respectively. Its corporate capitalization and surplus, per books, as at December 31, 1943, were as follows:

	Corporate	
	Amount	%
Preferred stock (no par value):[2]		
$5 dividend series	$ 15,600,100	25.0
$5.50 dividend series	19,204,600	30.8
$6 dividend series	6,996,800	11.2
Total preferred stock	$ 41,801,500	67.0
Common Stock and surplus:		
Common stock ($1 par)	$ 1,909,968	3.1
Capital surplus	15,161,140	24.3
Earned surplus (since 5/31/38)[3]	3,480,525	5.6
Total common stock and surplus	$ 20,551,633	33.0
Total capitalization and surplus	$ 62,353,133	100.0

[1] For prior cases concerning reacquisition of Engineers' preferred stocks see *Engineers Public Service Company*, 4 SEC 615 (1939); *Engineers Public Service Company*, 9 SEC 84 (1941); *Engineers Public Service Company*, SEC (1943), Holding Company Act Release No. 4114; and *Engineers Public Service Company*, SEC (1943), Holding Company Act Release No. 4559.

[2] Stated at involuntary liquidating value of $100 per share.

[3] After adjusting for the loss on the sale of Engineers' holdings of Puget Sound Power & Light Company common stock and the profit on the sale of Engineers' holdings of El Paso Natural Gas Company common stock.

Commission's Exhibit No. 6 (Cont'd)

As shown in the above table, Engineers has no funded debt outstanding. The preferred stock was issued in three series *pari passu* as to assets and earnings, and is entitled to $100 per share plus accrued dividends on involuntary liquidation. Upon redemption or voluntary liquidation the $5 dividend series is entitled to $105 per share plus accrued dividends; the $5.50 and $6 dividend series are entitled to $110 plus accrued dividends. There are no dividends in arrears on the preferred stock.

The capitalization and surplus of Engineers and its subsidiaries as reported on a consolidated basis as at December 31, 1943, were as follows:

	Consolidated	
	Amount	%
Funded debt of subsidiary companies	$ 89,676,000	44.7
Preferred stock:		
Subsidiary companies	$ 34,609,958	17.3
Engineers Public Service Company	41,801,500	20.9
Total preferred stock	$ 76,411,458	38.2
Minority interests	$ 72,835	–
Common stock and surplus:		
Common stock	$ 1,909,968	1.0
Premium and discount on preferred stocks of subsidiaries	62,380	–
Capital surplus	19,661,146	9.8
Consolidated earned surplus (since 5/31/38)[4]	12,701,846	6.3
Total common stock and surplus	$ 34,335,340	17.1
Total consolidated capitalization and surplus	$200,495,633	100.0

ASSETS

The corporate assets as reported by Engineers at December 31, 1943, aggregated $67,047,637, including $54,371,548 of investments in subsidiary companies. On a consolidated basis the total assets as reported by Engineers at December 31, 1943 were $257,111,107 of which utility plant, including transportation, water and ice plant, aggregated $196,340,045. Original cost studies have been completed by the subsidiary

[4] See footnote 3, *supra*.

companies with respect to $151,617,089 of utility plant[5] showing that at least $11,067,098 of adjustments and acquisition adjustments are included therein.[6]

EARNINGS

Corporate and consolidated income statements of Engineers, actual and pro forma, for the year ended December 31, 1943, are annexed hereto as appendices C and D, respectively.

The corporate and consolidated gross income of Engineers for the year ended December 31, 1943, and the relation of such income to preferred dividend requirements are shown below:

---

[5] Original cost studies are in process with respect to utility plant amounting to $22,066,080 and such studies are not required for utility plant in the remaining amount of $22,656,876.

[6] This amount consists of the following:

Virginia Electric and Power Company:		
Electric Plant Adjustments (Acct. 107)	$3,417,919	
Electric Plant Acquisition Adjustments (Acct. 100.5)	4,419,002	
Total Virginia Electric and Power Company		$ 7,836,921
Gulf States Utilities Company:		
Electric Plant Acquisition Adjustments (Acct. 100.5)	$ 750,989	
Common Utility Plant Acquisition Adjustments (Acct. 108.15)	2,479,188	
Total Gulf States Utilities Company		3,230,177
Total		$11,067,098

The original cost study of Virginia Electric and Power Company is still subject to review by the Federal Power Commission, and the major items therein will receive consideration in connection with the proceeding referred to in footnote 8 below. The original cost study of Gulf States Utilities Company has been reviewed by the Federal Power Commission which ordered the amortization of the amounts in Accounts 100.5 and 108.15 over a 15-year period ending in 1957, through equal monthly charges to miscellaneous amortization with concurrent credits to reserve for amortization.

Commission's Exhibit No. 6 (Cont'd)

	Corporated	Consolidated

[7] After adjustments for the sale of Puget Sound Power & Light Company and El Paso Natural Gas Company common stock, and elimination of dividends on other investments disposed of in 1943.

[8] Includes $764,765 of cash received by Engineers as proceeds from the sale on February 9, 1944 of 64,266 shares of Puget Sound Power & Light Company common stock and $1,823,300 of cash from the sale on March 1, 1944 of 51,357 shares of El Paso Natural Gas Company common stock. Cash and temporary cash investments include amounts proposed to be used in connection with the application of Engineers (File No. 70-846) presently pending before this Com-

Commission's Exhibit No. 6 (Cont'd)

PRICE RANGE AND VOLUME OF TRADING.

All three series of preferred stocks are listed on the New York Stock Exchange. The reported volume of sales and the high and low prices on the Exchange are shown below by years for the period 1940-1943 inclusive and by weeks during January, February and March 1944:

---

mission. This application provides for the purchase of Virginia Public Service Company common stock by Engineers for $1,000,000 in cash immediately, and an additional $1,500,000 payable in installments and contingent upon future earnings of the proposed merged company. Subsequent to the above common stock purchase, Virginia Public Service Company would be merged into Virginia Electric Power Company, a subsidiary of Engineers. Concurrently, with the proposed merger Engineers would make a capital contribution of $2,500,000 to the merged company. Thus, Engineers would have an immediate cash outlay of $3,500,000 and additional contingent payments of $1,500,000 over a period of not more than five years.

Commission's Exhibit No. 6 (Cont'd)

The closing prices on the New York Stock Exchange on March 21, 1944, the day prior to the hearing, were 96½ for the $5 preferred, 98 bid and 99½ asked for the $5.50 preferred, and 101 for the $6 preferred.

COMPLIANCE WITH STATUTORY STANDARDS—CONCLUSIONS

In our denial of effectiveness to the declaration by Engineers regarding the reacquisition of 35,000 shares of its preferred stock,[11] we emphasized the fact that we were unable to determine that there was a reasonable relationship between the prices at which the preferreds were to be acquired[12] and their treatment under a comprehensive plan. However, in our order of September 10, 1943, wherein we approved a proposal by Engineers to reacquire 25,678 shares of its preferred stocks in exchange for cash and shares of common stock of El Paso Natural Gas Company,[13] we pointed out in relation to the earlier case that as the amount to be received by the preferred stockholders tends to approach the maximum claim of the stock, the likelihood of any unfairness would be diminished. As noted above, the curent market prices of the three series of preferred stocks which Engineers now proposes to reacquire are close to the involuntary liquidating prices and under the circumstances we are satisfied that the proposed reacquisition is not unfair to the security holders of Engineers.

The working capital, earnings and current cash position appear adequate to justify the proposed expenditure by

---

[11] *Engineers Public Service Company,* S.E.C. (1943); Holding Company Act Release No. 4559.

[12] From March 1, 1942, to January 30, 1943, all of the three series of preferred stocks were selling at heavy discounts. Market prices ranged from a low of 40 to a high of 64¼ for the $5 preferred stock; a low of 46⅛ to a high of 66 for the $5.50 preferred stock; and a low of 47½ to a high of 74 for the $6 preferred stock.

[13] No shares of preferred stock were acquired under this order, and, as noted in footnote 3, Engineers has sold its entire interest in El Paso Natural Gas Company for cash pursuant to a public offering.

Commission's Exhibit No. 6 (Cont'd)

Engineers, and refusal to permit the declaration, as amended, to become effective does not appear necessary or appropriate to protect the financial integrity of Engineers or its subsidiaries, or to prevent the circumvention of any provisions of the Act or of any rules, regulations or orders thereunder. We therefore find that the standards of Section 12 (c) and Rule U-42 are met.

As to the period of time proposed to acquire the preferred stocks, we feel that the said proposal should be approved for not more than four months from the effective date of our order herein without prejudice to the right of Engineers to apply for an extension thereof.

In permitting Engineers to purchase its preferred stocks, we do not expressly or by implication take any position on the question of whether or not it would be relatively advantageous or disadvantageous for a preferred stockholder to sell. That is a matter that each stockholder must determine for himself.

Our order will permit the declaration and amendments thereto to become effective subject to the terms and conditions prescribed in Rule U-24 and subject to the following terms and conditions:

(1) At least ten days before purchases are commenced, Engineers shall cause to be mailed to each holder of record of its preferred stocks a notice of its intention to make such purchases and the method to be employed together with a copy of the Findings and Opinion in this matter, and also publish, not less than five days before beginning such purchases, a similar notice in daily newspapers of general circulation in New York, New York, and Boston, Massachusetts;

(2) Engineers shall not solicit or cause to be solicited the sale to it or for its account of any of its preferred stocks;

Commission's Exhibit No. 6 (Cont'd)

(3) Engineers shall not purchase its preferred stock knowingly, directly or indirectly, from any associate company or from any officer or director of Engineers or of any associate company;

(4) Engineers shall furnish to the Commission promptly after each week a schedule showing the number of shares of each series of preferred stock purchased during that week, the prices at which they were purchased and the names of the brokers through whom purchased;

(5) Engineers, promptly upon completion of the proposed purchase program, shall notify all of its preferred stockholders that such program has been completed, and such notification shall be given in the same manner as is provided in (1) above for notification of the commencement of the program;

(6) All purchases shall be effected on the New York Stock Exchange except that the Company may purchase large blocks of stock otherwise than on said Exchange provided that notice of intention to effect each such purchase together with a statement of the identity of the seller, the price proposed to be paid and any fees or commissions to be incurred in connection therewith shall have been given to the Commission and the Company shall not have been informed by the Commission that it intends to issue an order to show cause why such purchase should not be consummated;

(7) No purchases shall be made after four months from the date of the order herein subject, however, to the right of Engineers to apply for an extension or extensions of said period; and

Commission's Exhibit No. 6 (Cont'd)

(8) The Commission reserves the right to rescind or modify this order upon motion of Engineers or upon its own motion after notice to Engineers at any time prior to the expiration of said four months period, such rescission or modification to be applicable only to such portion of the $4,000,000 as shall not have been previously expended.

An appropriate order will issue.

By the Commission (Commissioners Pike, O'Brien and McConnaughey), Commissioner Healy concurring in result and Chairman Purcell being absent and not participating.

ORVAL L. DUBOIS,
Secretary.

Commission's Exhibit No. 6 (Cont'd)

UNITED STATES OF AMERICA

BEFORE THE SECURITIES AND EXCHANGE COMMISSION

At a regular session of the Securities and Exchange Commission, held at its office in the City of Philadelphia, Pa., on the 14th day of April, A. D., 1944.

IN THE MATTER *of* ENGINEERS PUBLIC SERVICE COMPANY File No. 70-867 (Public Utility Holding Company Act of 1935—Section 12 (c))	Order Permitting Declaration to Become Effective

A declaration and amendments thereto having been filed by Engineers Public Service Company under Section 12 (c) of the Public Utility Holding Company Act of 1935 and Rule U-42 promulgated thereunder, a hearing having been held after appropriate notice, and the Commission being fully advised and having this day made and filed its findings and opinion herein:

IT IS ORDERED that said declaration, as amended, be and it hereby is permitted to become effective subject to the terms and conditions prescribed in Rule U-24, and subject to the conditions enumerated below:

(1) At least ten days before purchases are commenced, Engineers shall cause to be mailed to each holder of record of its preferred stocks a notice of its intention to make such purchases and the method to be employed, together with a copy of the Findings and Opinion in this matter, and also publish, not less than five days before beginning

Commission's Exhibit No. 6 (Cont'd)

such purchases, a similar notice in daily newspapers of general circulation in New York, New York, and Boston, Massachusetts;

(2) Engineers shall not solicit or cause to be solicited the sale to it or for its account of any of its preferred stocks;

(3) Engineers shall not purchase its preferred stock knowingly, directly, or indirectly, from any associate company or from any officer or director of Engineers or of any associate company;

(4) Engineers shall furnish to the Commission promptly after each week a schedule showing the number of shares of each series of preferred stock purchased during that week, the prices at which they were purchased and the names of the brokers through whom purchased;

(5) Engineers, promptly upon completion of the proposed purchase program, shall notify all of its preferred stockholders that such program has been completed, and such notification shall be given in the same manner as is provided in (1) above for notification of the commencement of the program;

(6) All purchases shall be effected on the New York Stock Exchange except that the Company may purchase large blocks of stock otherwise than on said Exchange provided that notice of intention to effect each such purchase together with a statement of the identity of the seller, the price proposed to be paid and any fees or commissions to be incurred in connection therewith shall have been given to the Commission and the Company shall not have been informed by the Commission that it intends to issue an order to show cause why such purchase should not be consummated;

Commission's Exhibit No. 6 (Cont'd)

(7). No purchases shall be made after four months from the date of the order herein subject, however, to the right of Engineers to apply for an extension or extensions of said period; and

(8) The Commission reserves the right to rescind or modify this order upon motion of Engineers or upon its own motion after notice to Engineers at any time prior to the expiration of said four month period, such rescission or modification to be applicable only to such portion of the $4,000,000 as shall not have been previously expended.

By the Commission.

ORVAL L. DUBOIS,
Secretary.

NEW YORK 6, N. Y.

Digby 4-2956-2682

January 7, 1947

Mr. B. S. Kanton
Staff of the Public Utilities Division
Securities and Exchange Commission
Philadelphia, Pennsylvania

Dear Mr. Kanton:

In connection with our telephone conversation of last Friday on the Engineers Public Service Company case, I have been doing some additional work and have about concluded to participate in the formation of a common stockholders' committee. Presumably such a committee would be formed under the rules of U-62 which require a disclosure of the holdings by the members of the committee.

Accordingly it seems unnecessary to avail myself of your suggestion to file an exhibit, and, for your information only, I will confine myself at this time to the following recitation of facts:

My first investment in Engineers Public Service common stock was purchased early in 1944 and was added to within the same year, and subsequently reduced in 1946 on balance. The Central-Illinois Securities Corporation made its first purchase in 1945 and additional shares were acquired at several times during 1946.

Very truly yours,

C. A. JOHNSON
C. A. Johnson

Letter of C. A. Johnson to Securities and Exchange Commission Stating Objections to Amended Plan (referred to at oral argument of January 3, 1947, rec. 857a).

December 30, 1946.

Securities and Exchange Commission
18th and Locust Streets
Philadelphia, Pennsylvania

Re: Engineers Public Service Company et al
Files Nos. 54-132, 70-1149, 70-1150,
70-1419

Gentlemen:

I am President and a Director of Central-Illinois Securities Corporation, an investment company registered with the Commission under the Investment Company Act of 1940. Central-Illinois Securities Corporation is the owner of 5,000 shares of common stock of Engineers Public Service Company. I am also personally the owner of 1,000 shares of common stock of Engineers Public Service Company, and can speak for other investors owning additional substantial amounts.

I received on December 24, 1946 a copy of the Commission's notice of filing of amendment and order for argument and hearing issued in the above-entitled proceeedings under date of December 19, 1946 (H. C. A. R. No. 7077). I note that a hearing and argument will be held before the Commission January 3, 1947 at 10:30 a. m. Unfortunately, the short notice provides me with insufficient time to adjust previous commitments necessary for that day at the specified time, and since I cannot be personally present, I am obliged to take this means of placing my views before the Commission.

Accordingly, I respectfully request that the Commission direct that this letter be read into and made part of the record of the proceedings with the same force and effect as though it had been made personally by me as an oral statement delivered at the hearing to be held January 3, 1947.

In the Commission's Findings and Opinion issued December 5, 1946 in these proceedings (H. C. A. R. No. 7041)

the Commission stated that it could not approve various provisions of the Section 11(e) plan filed by Engineers, including the provision for payment to preferred stockholders of $100. per share. Further, the Commission indicated its disapproval of the formulation by Engineers of its plan into two parts, and separate consideration of each of said parts. The Commission indicated that such provision was not necessary in order to permit Engineers to obtain judicial review of the Commission's decision requiring additional amounts in excess of $100 per share to be paid to the preferred stockholders, stating:

> "* * * We think the objectives can easily be achieved with fairness to both the common and the preferred, by the method which we have followed in other similar cases.
>
> "We have approved plans whereby immediate payment was made of the amount conceded to be due and the question of any additional amounts payable was reserved for further litigation. There would seem to be no reason why, upon the District Court's approval of this plan, a similar payment could not be made to the preferred here, thereby ending any claim to dividends while their rights to any additional payment are being litigated and are secured in an escrow. This of course assumes that the escrow would cover not only the amount in dispute but also compensation for the withholding, during the period of litigation, of any additional amount found payable.
>
> "Engineers has also indicated that the proposed severance was designed to preserve its right to challenge before the Commission or the courts any additional payment which we find due the preferred. We agree that Engineers should have this right, and we see nothing incongruous in the company's challenging before the courts this portion of the plan which

Letter of C. A. Johnson (Cont'd)

has been inserted at our insistence and with which it finds itself in disagreement."

I am in entire agreement with the foregoing statement of the Commission, and would not find it necessary to appear at this time *if* the management of Engineers had acted in accordance with the Commission's suggestion. However, it appears from the Commission's notice with respect to the filing of amendments (H. C. A. R. 7077) that the management of Engineers does not propose to follow the procedure suggested by the Commission with respect to the establishment of an escrow fund pending judicial review, but proposes instead to pay to the preferred stockholders the full call premiums. Nor does it seem from the statement of conditions set forth on page 5 of the Commission's notice that the amended plan of Engineers is expressly conditioned upon and subject to enforcement by a United States District Court pursuant to Sections 11(e) and 18(f) of the Public Utility Holding Company Act of 1935. There would therefore seem to be danger that the payment of the premiums to the preferred stockholders might be carried out without judicial review of the Commission's determination as to the fairness and equity of such payment.

I respectfully suggest that the Commission should not permit that portion of the amended plan which provides for the payment of premiums to the preferred stockholders to become effective unless and until it has been approved by order of a District Court in proceedings under Sections 11(e) and 18(f) of the Act, and any appeals from such District Court order have been finally determined. I have not previously appeared in these proceedings because I have been of the view that the position taken by the management of Engineers in its original 11(e) plan was correct and adequately protected the interests of the common stockholders. It now appears, however, that the management in filing its amendments has completely abandoned the provision for court review and does not intend to seek final judicial deter-

mination with respect to the payment of premiums to the preferred stockholders. Although I am most reluctant to become involved in this case, I adhere to the view that it is not fair and equitable to the common stockholders of Engineers for such extra payments to be made to the preferred stockholders. Even if I were willing to acquiesce in this decision so far as concerns my own personal interests, there is considerable question in my mind whether I have the right to do so as president and director of an investment company having many public security holders and owning a substantial amount of Engineers common stock as well as other public utility holding company common stocks that may be adversely affected by the blanket adoption of the indicated principle with reference to the retirement of preferred stocks.

For these reasons I may be regretfully impelled to seek judicial review of this phase of the company's amended plan, or to join with other representatives of common stockholders who may feel similarly aggrieved in the event the company does not itself proceed to test this question. Since the question has never to my knowledge been definitely passed upon by the courts, I feel sure that the Commission would welcome such judicial review and would not desire to foreclose the possibility thereof, or permit the management to do so.

In order that there may be no misunderstanding, I summarize below my position:

(1) The provision of the amended Engineers, plan providing for the payment to the preferred stockholders of sums in excess of $100 per share is not fair and equitable to the common stockholders of the company, for all the reasons heretofore advanced by the management of Engineers in these proceedings; and for the further reasons advanced by former Commissioner Healy in his dissenting opinion in matter of American Power & Light Company, Files Nos. 70-618, 54-100 (H.C.A.R. No. 6176), and for other

reasons. The charter of Engineers expressly states *affirmatively* that in the event of liquidation, dissolution or winding up of the corporation, the holders of the preferred stock shall be entitled to receive only $100 per share plus accrued dividends; and that additional amounts in the form of premiums shall not be payable unless such dissolution is voluntary. Engineers has contended, and the Commission has found, that the dissolution contemplated in Engineers' plan is *not* voluntary. It is further to be noted that the preferred stock of Engineers cannot be regarded as having an investment caliber comparable with that of the debentures of American Power & Light, concerning which Judge Healy wrote his dissenting opinion, in view of the fact that dividends were in arrears on Engineers' preferred stocks for the three-year period July 1, 1933 to July 31, 1936, and that such preferred stocks have sold throughout the entire period of their issuance at an over-all average of between $62.77 and $67.16 per share (see Commission's opinion, H.C.A.R. No. 7041, p. 27, note 45). Further, even assuming the application of the investment theory in this case, it follows that the investment value should be based upon a so-called "normal" investment value over a period of years rather than upon circumstances only presently existing.

(2) In any event, the provision of Engineers' amended plan which provides for payment of amounts in excess of $100 per share to the preferred stockholders should not be approved unless amended to provide (a) that such provision shall not become effective unless and until approved by order of a United States District Court under and pursuant to Sections 11(e) and 18(f) of the Holding Company Act, and final disposition of any appeals from such order of the District Court; (b) that pending review by the District Court, and of any appeals from the order of the District Court, Engineers will deposit in escrow the amounts in dispute plus an amount sufficient to provide compensation for

Letter of C. A. Johnson (Cont'd)

the withholding during the period of litigation of any additional amounts found payable.

The Commission's courtesy in making this letter a part of the record in the proceedings, as requested above, will be greatly appreciated.

Very truly yours,

C. A. JOHNSON

IN THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT

No. 9428

In the Matter of Engineers Public Service Company, Thomas W. Streeter, Appellant

Notice of Petition for Stay—June 2, 1947

Sirs:

Please take notice that on the 2nd day of June, 1947, at 10:30 o'clock in the forenoon (E.D.S.T.), or as soon thereafter as counsel can be heard, the annexed petition of Thomas W. Streeter will be presented to the Honorable Judges of the United States Circuit Court of Appeals for the Third Circuit at the United States Court House, Philadelphia, Pennsylvania.

Dated: New York, New York, June 2, 1947.

Yours, etc., (S.) Lawrence R. Condon, Attorney for petitioner and preferred stockholders of Engineers Public Service Company, 165 Broadway, New York 6, New York.

Five days' notice of the Motion for Stay Pending Appeal is hereby waived:

(S.) Harry G. Slater, Esq., Chief Counsel, Public Utilities Division, Securities and Exchange Commission, 18th and Locust Streets, Philadelphia 3, Pennsylvania.

Louis Boehm, Esq., 60 Broad Street, New York 4, New York.

(S.) William E. Tucker, Esq., Mudge, Stern, Williams & Tucker, Esqs., 40 Wall Street, New York 5, New York.

(S.) Alfred Berman, Esq., Guggenheimer & Untermyer, 30 Pine Street. New York 5, New York.

(S.) Francis H. Scheetz, Esq., Evans, Bayard & Frick, Land Title Building, Philadelphia, Pa.

Endorsements: Notice of Petition for Stay. Received & Filed June 2, 1947. William P. Rowland, Clerk.

[fol. 3] IN THE UNITED STATES CIRCUIT COURT OF APPEALS
FOR THE THIRD CIRCUIT

In the Matter of ENGINEERS PUBLIC SERVICE COMPANY,
Thomas W. Streeter, Appellant

PETITION FOR STAY—Filed May 31, 1947

To the Honorable, the Judges of the United States Circuit Court of Appeals, for the Third Circuit:

The petition of Thomas W. Streeter respectfully represents:

1. On May 29, 1947, Hon. Paul Leahy, one of the Judges of the District Court granted an order, upon the application, dated January 9, 1947, of the Securities and Exchange Commission ("the Commission") for enforcement of a Plan Pursuant to Section 11(e) of the Public Utility Holding Company Act of 1935 for Divestment of Assets and Related Matters, approved by the Securities and Exchange Commission by its order, dated January 8, 1947.

2. A copy of the order of the District Court is annexed hereto and marked Exhibit "A".

3. On May 29, 1947, your petitioner duly appealed from the said order and said appeal is now pending, undisposed of.

4. Your petitioner is a director and preferred stockholder of Engineers Public Service Company ("Engineers") and was authorized by the Board of Directors to retain counsel for the purpose of assuring that the interests of the preferred stockholders are represented in these proceedings.

[fol. 4] 5. Upon information and belief, Engineers is a corporation organized under the laws of Delaware and is a holding company within the meaning of Section 2(a)(7) of the Public Utility Holding Company Act of 1935 ("the Act"). Engineers has filed notification of registration under Section 5(a) of the Act and is a registered holding company thereunder.

6. Upon information and belief, the Commission is an agency and instrumentality of the United States created by and organized pursuant to Section 4 of the Securities Ex-

change Act of 1934, being Title I of the Act approved June 6, 1934, 48 Stat. 885, 15 U. S. C. Sec. 78 (d).

7. Upon information and belief, on September 16, 1942 and October 6, 1942 the Commission, in a proceeding instituted by it, pursuant to the provisions of Section 11(b)(1) of the Act, directed in substance, that Engineers sever its relationship with certain of its subsidiary companies by disposing of its direct and indirect ownership, control, and holding of securities issued and properties owned, controlled or operated by certain of its subsidiary companies. A petition to review the Commission's orders of September 16, 1942 and October 6, 1942 was filed by Engineers with the United States Court of Appeals for the District of Columbia, which court reversing, in part, the determination of the Commission, *set aside the orders* and remanded the case to the Commission for further proceedings in accordance with its opinion. *Engineers Public Service Company v. S. E. C.*, 138 F. (2d) 936. Both the Commission and Engineers applied to the Supreme Court of the United States for writs of certiorari which were granted, 322 U. S. 723. The matter is awaiting reargument. In the meantime Engineers has disposed of certain of the investments ordered divested by the Commission. At the present time, Engi- [fol. 5] neers' assets consist, in the main, of investments in three operating utility companies and cash. Engineers' capitalization consists solely of preferred and common stock.

8. On September 10, 1945, Engineers filed an application with the Commission, pursuant to Section 11(e) of the Act, for approval of a plan allegedly designed to effectuate compliance with the orders of the Commission and for the purpose of retiring the preferred stock at $100 per share. The plan was divided into two parts. The purpose of part I was stated to be to provide for the disposition of the assets and the possible dissolution of Engineers. Part II was intended to permit a separate determination as to the proper treatment to be accorded the preferred stockholders.

9. Public hearings were duly held from time to time during which the company's plan was subsequently amended in various respects. On January 30, 1946, Engineers made a motion requesting the Commission to separate Parts I

and II of the plan and to enter a separate order with respect to the retirement of the preferred stock. On February 13, 1946 the record before the Commission was closed. Briefs were filed and the Commission heard oral argument on the plan. On December 4, 1946 the Commission issued its Findings and Opinion in which it found that the divestment features of the plan and the dissolution of Engineers were necessary to effectuate the provisions of Section 11(b) of the Act, but that various aspects of the transactions proposed to accomplish these results were unnecessary, and unfair and inequitable. The Commission also found that the proposal to retire the preferred stock at $100 per share was unfair. In addition, the Commission denied the Company's motion to separate the issue as to the treatment to be ac- [fol. 6] corded the preferred stock from the balance of the plan. The Commission found that fairness to the preferred stockholders required the payment of at least the call prices of their securities and further found that if the company desired to litigate the question of whether any amounts in excess of $100 per share should be paid the preferred stockholders, the plan should be amended to provide for an escrow of the difference between the call prices and $100 per share. The Commission stated that if the plan were amended within 30 days, in accordance with the Commission's views, an appropriate order would be entered approving the plan as thus amended; otherwise, an order of disapproval would be entered. Said Findings and Opinion of the Commission was published as Holding Company Act Release No. 7041, a copy of which is attached hereto and marked "Exhibit B".

10. On December 17, 1946, Engineers filed an amended plan which was incidentally amended on December 31, 1946. This plan eliminated the provisions for separating the issue dealing with the treatment to be accorded the preferred stockholders and provided for the retirement of the preferred stocks at their respective call prices. There was no provision for an escrow of any kind. A copy of such amended plan is attached hereto as "Exhibit C" and will be referred to as "the plan". Upon information and belief, the Company by letter, dated December 20, 1946, notified all the stockholders as to the provisions in the plan regarding the treatment proposed to be accorded the preferred stockholders and informed the stockholders that the

Company did not propose to contest the findings of the Commission in that regard.

[fol. 7] 11. On December 19, 1946 the Commission entered its Notice and Order reopening the record and setting the matter down for hearing and argument. Upon information and belief, a copy of the Commission's Notice, which fully described the plan, was sent to all stockholders at least 10 days before said hearing and argument; said Notice was published as Holding Company Act Release No. 7077 and is attached hereto as "Exhibit D". The reconvened hearing and argument was held and completed and the record was closed on January 3, 1947.

12. On January 8, 1947 the Commission entered its Supplemental Findings and Opinion and Order, finding the plan necessary to effectuate the provisions of Section 11(b) and fair and equitable to the persons affected thereby and approving the plan. The Supplemental Findings, etc. was published as Holding Company Act Release No. 7119, and is attached as "Exhibit E".

13. Pursuant to Engineers' request in accordance with Section 11(e) of the Act, on January 9, 1947 the Commission applied to the District Court to enforce and carry out the provisions of the amended plan.

14. On January 9, 1947, the District Court ordered that a hearing be held on February 17, 1947 for the purpose of determining whether the Court should enforce and carry out the terms and provisions of the plan and whether the plan is fair and equitable and appropriate to effectuate the provisions of Section 11(b) of the Act. The Court also ordered Engineers to give notice of such hearing to all its stockholders and to attach a copy of the Commission's Findings, etc. of January 8, 1947. In addition, the Court directed [fol. 8] that any person objecting to the Commission's application or to its various Findings, etc. or to the plan should file such objections in writing by February 10, 1947.

15. On February 8, 1947 your petitioner filed a statement of objections with the Court in which objection was made to the finding, in the Commission's Supplemental Findings, etc. of January 8, 1947, to the effect that in the event any common stockholder should secure a stay from the District Court preventing the payment of the full amount to which

the Commission found the preferred stockholders were entitled, it would be appropriate for Engineers to make a part payment on the preferred stocks of $100 per share and stop the accrual of further dividends.

16. Upon information and belief, on February 13, 1947, without prior notice from the Company or the Commission of any application or proceeding in respect thereto, your petitioner's attorney was served by mail with a copy of an alleged "Order of Amendment" purportedly entered by the Commission on February 11, 1947 at the request of Engineers for "tax purposes". Such alleged "Order of Amendment" purported to approve an "alternative" method of consummating the plan, at the discretion of Engineers' counsel, whereby the company proposed to make certain "incidental changes" such as to retire the preferred stock at $100 per share, terminate the accrual of dividends and create an escrow for the difference between $100 per share and the call prices. The "Order of Amendment" was published as Holding Company Act Release No. 7190 and is attached hereto as "Exhibit F".

[fol. 9] 17. Upon information and belief, counsel for the Commission on February 13, 1947 filed a motion in the District Court for leave to supplement its application of January 9, 1947 by including therein reference to, and a copy of the Commission's alleged "Order of Amendment". Notice of such motion was served on the attorney for your petitioner on February 13, 1947.

18. Upon information and belief, on February 17, 1947, at the hearing before the District Court, counsel for your petitioner objected to the granting of the Commission's motion to supplement its application because of the failure of the Commission to give notice and an opportunity for hearing before entering its alleged "Order of Amendment". The District Court neither granted nor denied said motion but reserved its ruling on the same. At such hearing, counsel for Engineers stated that it was the company's intention to consummate the plan in accordance with the "alternative" method allegedly approved by the Commission's so-called "Order of Amendment".

19. Upon information and belief, on February 17, 1947 counsel for your petitioner secured leave from the District

Court and filed a Supplemental Statement of Objections, to the Commission's application and to its alleged "Order of Amendment". A copy of such Supplemental Statement is attached hereto as "Exhibit G".

20. Upon information and belief, without prior notice or an opportunity to be heard with respect to the provisions thereof, counsel for Engineers by letter, dated February 28, 1947, submitted to the District Court and to counsel for your petitioner a form of escrow agreement which is attached hereto as Exhibit I to the Court's order attached hereto as "Exhibit A".

[fol. 10] 21. Upon information and belief, after the hearing on February 17, 1947, briefs were filed and the District Court took the matter under advisement. On May 15, 1947, the Court issued its Opinion in which it found the plan appropriate to effectuate the provisions of section 11(b) of the Act, but also found that the plan was unfair and inequitable because of the provision to pay the call prices. Without ruling on the Commission's motion to amend its application, the Court approved the escrow agreement which had been submitted after the hearing and also approved the plan "with the exception of the payment of redemption premiums". A copy of the Court's Opinion is attached hereto as "Exhibit H".

22. Upon information and belief, counsel for your petitioner objected to the granting of the Court's order of May 29, 1947 and your petitioner requested a stay, pending appeal, of such order which request was denied by the District Court on May 29, 1947.

23. Upon information and belief, no proceedings have been instituted by the Commission under Section 11(b)(2) of the Act directed against Engineers and there is no order of the Commission requiring the dissolution of the company.

24. Upon information and belief, the Board of Directors of Engineers, on May 22, 1947, authorized and directed the officers of the company to proceed immediately with the consummation of the plan after the granting by the District Court of an order of enforcement.

25. Upon information and belief, the District Court's order of May 29, 1947 approved the plan *except for the*

treatment proposed to be accorded the preferred stockholders; approved and adopted the escrow agreement submitted by counsel for Engineers and "suggested" by Coun-
[fol. 11] sel for the Commission; authorized, ordered and directed the company to take and to cause to be taken as soon as practicable all action necessary to carry into effect and fully to consummate the steps and transactions provided in the plan except the allowance or payment to the preferred stockholders of any amounts in excess of $100 per share; terminated the rights of Engineers' preferred stockholders except as specified in said order; and enjoined all persons from interfering with the consummation of the plan.

26. Upon information and belief, the Company, through its officers, proposes to terminate dividend payments to the preferred stockholders in accordance with the terms of the escrow agreement and contemplates, in accordance with the provisions of the plan, the distribution of substantially all its assets to its many common stockholders.

27. Your petitioner intends to promptly prosecute his appeal from the order of May 29, 1947.

28. The escrow approved and adopted by the Court without notice or an opportunity to be heard is inadequate to protect the interests of the preferred stockholders.

29. If a stay of the order of May 29, 1947 and of the consummation of the plan is not granted, your petitioner and the other preferred stockholders will be irreparably injured through the distribution of substantially all the company's assets and your petitioner's right of appeal from the order directing and permitting the consummation of the plan and adopting an inadequate escrow may be defeated, in effect, by a consummation of the plan before the hearing and decision on appeal.

[fol. 12] 30. Upon information and belief, your petitioner's appeal herein has merit. See the affidavit of your petitioner's attorney, which is attached hereto as "Exhibit I".

31. No previous application, except as above stated, has been made for the relief herein sought or for similar relief.

Wherefore, your petitioner respectfully prays that, pending the determination of an appeal herein, consummation of the plan and creation of the escrow authorized, approved, and directed by the District Court's order of May 29, 1947, be stayed, that all persons be enjoined from taking any further steps in accordance with said order or in connection with said plan until further order of this Honorable Court, and that your petitioner have such other and further relief as is just and proper.

Dated: Morristown, New Jersey, May 29, 1947.

Thomas W. Streeter, Petitioner.

Lawrence R. Condon, Attorney for petitioner and preferred stockholders of Engineers Public Service Company, 165 Broadway, New York 6, New York.

[fol. 13] *Duly sworn to by Thomas W. Streeter. Jurat omitted in printing.*

[fol. 14] NOTE RE EXHIBITS "A" TO "H" TO PETITION FOR STAY

The following exhibits (A to H, inclusive) annexed to the foregoing Petition for Stay of Thomas W. Streeter, dated May 29, 1947, have been omitted, as they appear in the record previously printed as follows:

Exhibit A. Order of District Court approving and enforcing Plan, dated May 29, 1947 (R. 318a-330a).

Exhibit B. Findings and Opinion of the Commission, HCAR No. 7041, dated December 5, 1946 (R. 25a-101a).

Exhibit C. Engineers Public Service Company Plan dated September 10, 1945, as amended by Amendment No. 6 dated December 30, 1946 (R. 102a-116a).

Exhibit D. Securities and Exchange Commission Notice of Filing of Amendment and Order for Argument and Hearing on Plan as amended, HCAR #7077, dated December 19, 1946 (R. 117a-127a).

Exhibit E. Supplemental Findings and Opinion and Order of Securities and Exchange Commission, HCAR No. 7119, dated January 9, 1947 (R. 128a-150a).

Exhibit F. Order of Amendment of the Securities and Exchange Commission, HCAR No. 7190, dated February 11, 1947 (R. 165a-174a)

Exhibit G. Supplemental Statement of Objections of Thomas W. Streeter, et al., to Application filed by the Securities and Exchange Commission (R. 177a-180a).

Exhibit H. Opinion of District Court re Plan dated May 15, 1947 (R. 283a-292a).

[fol. 15] EXHIBIT "I" TO PETITION FOR STAY

STATE OF NEW YORK,
County of New York, ss:

Lawrence R. Condon, being duly sworn, deposes and says:

That he is the attorney for the petitioner, Thomas W. Streeter, that he has read the foregoing petition, that he is familiar with the contents thereof, the proceedings herein and the appeal heretofore taken by the petitioner from the order, dated May 29, 1947, entered in the District Court in this proceeding, and that in his opinion said appeal has merit for the following reasons among others:

1. The District Court erroneously substituted its judgment for that of the Securities and Exchange Commission in finding that the treatment proposed by the plan to be accorded the preferred stockholders was not fair and equitable.

2. The District Court erred in granting an order of enforcement without approving the plan, in toto.

3. The District Court erred in rewriting the plan.

4. The District Court erred in approving and adopting an escrow making substantial changes to the plan, which changes the Commission approved without notice to the preferred stockholders and without an opportunity to be heard.

5. The District Court erred in adopting an escrow without notice to the preferred stockholders and without an opportunity to be heard as to its adequacy.

6. The District Court erred in approving the alternative method of consummation of the plan after the rights of the parties had become fixed thereunder.

7. The District Court erred in granting an order which is inconsistent with its opinion.

[fols. 16-17] 8. The District Court erred in approving and adopting an escrow which does not adequately protect the interests of the preferred stockholders.

Lawrence R. Condon.

Sworn to before me this 29th day of May, 1947. Ellen E. O'Neil, Attorney and Counsellor at Law, State of New York, Off. & P. O. Address, 165 Broadway. Residing in Nassau County. No. 57-A. N. Y. Co. Clk's No. 183, Reg. No. A-99-0-9. Certificate filed in Westchester Co. Commission Expires March 30, 1949.

[fol. 18] IN THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT

[Title omitted]

ORDER DENYING APPELLANT'S PETITION FOR STAY—June 2, 1947

Present: Biggs, Maris and O'Connell, Circuit Judges.

Upon consideration of Appellant's Petition for stay and after hearing all counsel concerned,

It is Ordered that the said Petition for stay be, and the same is, hereby denied.

By the Court, Biggs, Circuit Judge.

June 2, 1947.

[File endorsement omitted.]

[fol. 19] UNITED STATES CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT

No. 9428 October Term 1947

In the Matter of ENGINEERS PUBLIC SERVICE COMPANY

THOMAS W. STREETER, Appellant

No. 9435 October Term 1947

In the Matter of ENGINEERS PUBLIC SERVICE COMPANY

HOME INSURANCE COMPANY OF NEW YORK, NATIONAL LIBERTY INSURANCE COMPANY OF AMERICA, New Brunswick Fire Insurance Company, Homestead Fire Insurance Company, Georgia Home Insurance Company, Tradesmens National Bank & Trust Company, etc., Appellants

[fol 20] No. 9440 October Term 1947

In the Matter of ENGINEERS PUBLIC SERVICE COMPANY

SECURITIES AND EXCHANGE COMMISSION, Appellant

Appeal from the United States District Court for the District of Delaware

Argued October 10, 1947

Before Biggs, Albert Lee Stephens and Maris, Circuit Judges

OPINION OF THE COURT—Filed March 19, 1948

By BIGGS, Circuit Judge:

The pertinent facts relating to these three appeals are clearly and succinctly set out in the opinion and findings of fact of the court below. See 71 F. Supp. 797. In addition thereto more complete descriptions of Engineers Public Service Company and its holding company system will be found in In the Matter of Engineers Public Service Co., 9 S. E. C. 764, 10 S. E. C. 904, and 12 S. E. C. 41 and 268. In view of these reports, no extended recapitulation of facts will be necessary.

The questions presented may be put as follows: (a) Did the Commission properly approve as "fair and equitable" within the meaning of Section 11(e) of the Public Utility

Holding Company Act of 1935, 15 U. S. C. A. §79k(e), cash [fol. 21] payments in certain amounts to be made to the preferred stockholders of Engineers Public Service Company; and (b) did the court below err in refusing to approve the plan proposed by the Commission as "fair and equitable", deciding that the cash payments should be in lesser amounts than those set up by the Commission? These questions, albeit put as two, are in fact one and one answer will suffice for both.

Preliminarily it may be stated that after extended hearings the Commission issued a series of orders designed to effect the integration of the Engineers system pursuant to Section 11(b)(1) of the Act. It is unnecessary to deal with these orders and with their disposition in detail.[1] It is enough to state here that Engineers has no funded debt; that its capital structure consists of preferred and common stock. The preferred stock is divided into three series. There are presently outstanding 143,951 shares of $5 cumulative dividend convertible preferred stock; 183,406 shares of $5.50 cumulative dividend preferred stock, and 65,098 shares of $6 cumulative dividend preferred stock. Each share of the three series has a stated value of $100 and under the applicable charter provisions each share is entitled to receive $100 plus accrued dividends in the event of involuntary liquidation; but on redemption or voluntary liquidation each share of the $5 series is entitled to receive $105 and each share of the $5.50 and each share of the $6 stock is entitled to receive $110 per share, plus accrued divi-

---

[1] Engineers filed a petition for review of certain of the orders of divestiture and integration in the United States Court of Appeals for the District of Columbia which reversed the Commission's orders in part. See Engineers Public S. Co. v. Securities and Exchange Co., 138 F. 2d 936. Both Engineers and the Commission filed petitions for writs of certiorari to the Supreme Court. Writs were granted. See Engineers Public Service Company v. S. E. C., 322 U. S. 723. Disposition was not had because of the lack of a quorum. In the meantime Engineers disposed of the properties which were the subject of the Commission's orders. On October 20, 1947, the Supreme Court dismissed the appeals as moot. See — U. S. —.

[fol. 22] dends.[2] The $5 series was sold with a convertible feature which need not be described here since it expired some time ago. The $5.50 series was sold with warrants, presently inoperative, entitling the holder thereof to purchase common stock. Engineers was given the right, to be exercised at its option, to redeem or call the whole or any part of the preferred stock at $100 per share, plus the fixed redemption premium therefor, together with the amount of any dividends accrued, or to repurchase its preferred stock from time to time at a price not exceeding that at which the stock might be redeemed.[3]

---

[2] As follows:

"III. *Preference on Liquidation, etc.* In the event of liquidation, dissolution or winding up of this Corporation or any reduction of its capital stock, resulting in any distribution of its assets to its stockholders, the holders of the preferred stock of each series shall be entitled to receive, for each share thereof, an amount equal to $100, together with all dividends accrued or in arrears thereon, plus, in case such liquidation, dissolution or winding up or reduction shall have been voluntary, the fixed redemption premiums for such series, if any, before any distribution of its assets shall be made to the holders of the common stock: but the holders of the preferred stock shall be entitled to no further participation in such distribution . . . A consolidation or merger of this Corporation with any other corporation or corporations shall not be regarded as a liquidation, dissolution or winding up of this Corporation within the meaning of this Paragraph III, provided such consolidation or merger does not substantially impair the rights and the preferences of the preferred stock. . . ."

[3] The applicable charter provisions are as follows:

"IV. *Redemption and Repurchase.* The Corporation may, at its option, at any time or from time to time, redeem the whole or any part of the preferred stock or of any series thereof, at a price for each share thereof equal to $100, plus the fixed redemption premium therefor, if any, together with the amount of any dividends accrued or in arrears, thereon. . . . This Corporation may also from time to time repurchase shares of its preferred stock at not exceeding the price or prices at which the same may be redeemed.

Reduced to its simplest terms the plan approved by the Commission provides that Engineers shall dissolve[4] and that its preferred stockholders shall receive for each share of preferred stock an amount equivalent to its stated value, plus the redemption premium as if on *voluntary* liquidation, with accrued dividends to the date of the deposit of each [fol. 23] share with a designated depository.[5] In other words, the three series of preferreds would be paid off at $105, $110 and $110 a share plus dividends. The court below took a different view, concluding that the plan approved by the Commission was not fair and equitable to the common stockholders of Engineers. Exercising its independent judgment it held that the plan would be fair and equitable if each share of preferred stock of Engineers received as payment only its stated value, viz. $100, plus an amount equal to the accrued dividends to the date of deposit. These payments would be the equivalents of those received by the preferred stockholders if Engineers had been subjected to *involuntary* liquidation, the common stockholders profiting, of course, to the extent of the difference. The common stockholders also give up their stock in Engineers and receive in lieu thereof stocks of subsidiary operating companies and other considerations. What has been stated represents the difference *in money* between the views of the Commission and that of the District Court, but the methods whereby the respective monetary results of the Commission and the court were arrived at represent the substantial question in the appeal at bar.

The Commission asserts that it arrived at the amount to be paid in cash for the preferred stocks by the application of the doctrine of equitable equivalents as enunciated by the Supreme Court in Otis & Co. v. Securities and Exchange Commission (The United Light and Power Co.), 323 U. S. 624. It takes the position that it has obeyed the clear mandate of the Act in that it has measured the rights to be surrendered by the preferred stockholders in terms of invest-

---

[4] The dissolution has in fact taken place and the directors are constituted trustees pursuant to the provisions of Section 43 of the Delaware Corporation Law. Rev. Code of Delaware, 1935, Section 2075.

[5] See "The Plan", Exhibit C attached to the application of the Commission.

ment value; that is to say *ex* the Act which itself necessitated the dissolution of Engineers. Relying on its interpretation of the Otis & Co. case the Commission has disregarded the liquidation provisions of the charter. The Commission in arriving at a value for the preferred stocks [fol. 24] relied in large part on the testimony of two experts, Dr. R. A. Badger and Mr. D. C. Barnes, president of Engineers. Dr. Badger prepared a report in which he analyzed the value of the three series of preferred stock comparing them as to fair investment, going concern and intrinsic value with stock of five other public utility holding companies like Engineers. He testified that he made his studies without regard to the plan of divestiture of Engineers required by Section 11 of the Public Utility Holding Company Act. He concluded that the three series of preferreds were worth respectively $107.49, $118.31 and $129.07 per share. He also compared the preferred stocks of Engineers with those of ten operating and holding companies selected on the basis of similarity of earnings' history with Engineers and found that these stocks had sold during the period examined at an average yield of 4.5%. Applying this yield to the three Engineers' preferreds he arrived at values for the three series of $111.11, $122.22 and $133.33. He reached the conclusion nonetheless that the "investment characteristics of the Company" and the conditions of the money market placed a proper yield for the three series of Engineers preferreds, absent a call price, of 4.6%. In view of the foregoing he expressed the opinion that the investment values of the three series were respectively $108.70, $119.57 and $130.33. Dr. Badger's evidence as to values also included a number of other elements, the principal items of which are referred to in the opinion of the court below. See 71 F. Supp. at pp. 801-802. These included the charges and preferred dividends earned, the proportion of obligations to total capitalization, the book value of equity per share of preferred, the percent of quick net assets to prior obligations and the times the parent company dividends were earned. Dr. Badger also commented on the "possible permanency of the [general] interest rate" and based his opinion, to a considerable extent, on this factor. These estimates of value were based as will have been observed on the continued existence of Engineers [fol. 25] as a "going concern." Dr. Badger really was testifying as we have indicated as to the *investment values*

of the preferreds; in short what they were worth to the present stockholders without the impact of the Act. Next, employing the call or voluntary redemption prices of the preferred as "stoppers", he cut the values down to the respective amounts, as we have stated, of $105, $110 and $110 a share. Mr. Barnes testified that the United States was in a "boom period." While conceding that the investment value of the preferreds might be as high as indicated by Dr. Badger his attitude was a more cautious one. We think that it is apparent on a careful examination of the testimony of the two men that each was testifying to values as of May, 1946, *ex* the Act.

The District Court expressly stated that it accepted Dr. Badger's values and that in the absence of a showing of changed circumstances it would deem them to be applicable at the time of the hearing. The District Judge went on to say, however, that "It must be conceded . . . . that these values are not controlling because the plan itself does not propose to give these amounts to the preferreds." The court considered a number of other elements which it designated as "colloquial" equities. It pointed out that "A significant reason why the present preferreds are able to be evaluated at more than their redemption prices is because of retained earnings over a period of years not paid as dividends to the common stockholders.", and that "The past sacrifices and contributions of the common contributed significantly to the present value of the preferreds. . . ." The court also concluded that the issuing prices and market histories of the preferreds looked toward non-payment of any premium, that none of the series of preferreds was initially sold to the public at prices in excess of $100 per share and that in order to sell the preferreds even at these prices it was deemed necessary to attach a convertible feature to the $5 series and warrants to the $5.50 series; that there was "no showing" that Engineers in fact received the amounts which the public paid for the various issues; that underwriting fees and "underwriting spreads [fol. 26] in vogue at the time" were large. "The important consideration", said the court, "is not what the preferred security holders paid, but how much the company received for their stock." The court concluded that Engineers did not receive as much as $98 a share and states that as a matter of "colloquial equity" the preferred stocks should not be

paid a premium. The trial court stated that market history *ex* the conversion and warrant privileges showed an average price "much below $100 per share" and that the importance of the conversion and warrant features is demonstrated by the lower average price of the $6 preferred in comparison with the other two series. The District Judge laid emphasis on the fact that dividends were not paid on the preferreds from July 1, 1933 to July 31, 1936, the accumulated arrearages being paid off in 1936 and 1937. He said: "The market history accordingly not only fails to support the preferreds' claim to a premium, but affords affirmative support to the non-payment of the premium." The court pointed also to the charter provisions of Engineers, concluding that the liquidation of the company was an involuntary liquidation brought about by the operation of the Holding Company Act, and, while not holding this fact to be determinative in respect to values, nonetheless referred to decisions where, the provisions of the Act having worked a dissolution, courts had treated the charter provisions of the holding companies involved as dispositive of the issue of whether premiums should be paid.[6] [7] In this finding of fact the court below laid particular emphasis on the losses sustained by Engineers in making the divestitures required by the Commission.[8]

---

[6] The court cited: In re Consolidated Electric & Gas Co., D.C. Del., 55 F. Supp. 211; In re North Continent Utilities Corp., D.C. Del., 54 F. Supp. 527; City National Bank & Trust Co. of Chicago v. S.E.C. and North American Light & Power Co., 7 Cir., 134 F. 2d 65; New York Trust Co. et al. v. S.E.C., 2 Cir., 131 F. 2d 274 and In re Standard Gas & Electric Co., D.C. Del., 59 F. Supp. 274.

[7] For references contained in this paragraph, see 71 F. Supp. pp. 801-2.

[8] As follows:

"37. Engineers sustained substantial losses on many of the properties sold by it in compliance with the requirements of Section 11(b)(1) of the Act and the Commission's divestment Orders thereunder. The largest of such losses was with respect to its investment in Puget Sound Power & Light Company which, after being drastically reduced in a Section 11(e) reorganization under the Holding Company Act, was disposed of in compliance with the Commission's divestment Or-

[Vol. 27] The trial judge also made a cogent finding respecting Dr. Badger's use of interest rates as an aid in fixing values for the preferred deeming the interest rate used by the latter to be too low. This finding also is set out in the margin.[9] The court below, as has been said, reached the

---

ders, for a total consideration of $774,475, as compared with a cost to Engineers of $34,000,000. The book loss on this investment was thus more than $33,000,000. A formal offer of proof was made during the proceedings before the Court to establish that the equity owned by Engineers in Puget Sound prior to the recapitalization would presently have a cash value of $10,000,000. It is not necessary for present purposes to determine this amount with exactitude. The subsequent increases in the earnings of Puget Sound, concerning which the Court takes judicial notice (Moody's Public Utility Manual [1946] p. 1081), over the amount estimated by the Commission for reorganization purposes (13 S. E. C. 226, 243), and the increase in market prices for utility common stocks which occurred subsequent to 1944 (to which the Securities and Exchange Commission makes reference in its Twelfth Annual Report to Congress, at p. 46) make plain that Engineers' investment in Puget Sound came to have a realizable cash value substantially higher than the amount realized by Engineers under the circumstances referred to above. Substantial book losses were also sustained by Engineers on the sale of its investments in Western Public Service Company of Maryland, of Missouri Service Company and Northern Kansas Power Company, of Savannah Electric & Power Company, and others.

"In the case of El Paso Natural Gas Company, with which Engineers also was ordered by the Commission to sever its relationship, Engineers held a valuable option on which it managed to realize a book profit; but subsequent to compliance with the Commission's divestment Order the market price of the El Paso Natural Gas Stock divested by Engineers rose by more than $4,000,000."

[9] As follows:

"51.6 The record establishes that the values attributed by Badger to the Engineers preferred stocks, largely

[fol. 28] conclusion that the amounts which should be paid to the preferreds should not exceed the cash payments which would have been received by them under a strict construction of Engineers' charter in an involuntary liquidation.

The court also said, and this represents the greatest difference between the respective approaches of court and Commission to the problem of valuation, "I do not consider the argument advanced [by the Commission] as to what these series of preferreds would be worth if there were no Public Utility Holding Company Act. I do not think it profitable to consider an argument based on unreality *for there is a Public Utility Holding Company Act.* Unless one subscribes completely to the doctrine of foreordination things might always be different from what they are." While recognizing that there might be more than one road to a fair and equitable plan of reorganization under the Act the court concluded that because the Commission had failed to weigh the factors of divestiture and dissolution as well as the other elements referred to in the court's opinion the plan did not meet the test of the Act since it was not fair and equitable.

At this point arises a question of law which, we think, goes to the heart of the instant controversy. What is the power conferred on the district courts of the United States by the Act? Section 11(e) provides that if the Commission finds a proposed plan of devestiture and integration necessary to effectuate the provisions of Section 11(b) and to be fair and equitable to the persons affected by it, the Com-

---

depend not only on market and economic conditions, but also on continuance of current money rates which were at the time of Badger's study concededly the lowest in the country's history; that such money rates in turn largely depend on continuance of governmental financial policies including "pegging" of the market on government securities; and that there is and can be no assurance that such policies will not be modified; nor can it be foretold how soon such modifications may take place. The extremely low money rates which resulted in Badger's finding that the preferred stocks of Engineers have an "investment value" greater than $100 per share, largely reflect artificial factors which are clearly subject to changes at any time and may well be of purely transitory character."

mission shall make an order approving the plan and may then apply to a district court of the United States to carry out its terms. Subsection (e) states also that: "If, upon any such application, the court, after notice and opportunity for hearing, shall approve such plan as fair and equitable and as appropriate to effectuate the provisions of Section 11, the court as a court of equity may, to such extent as it deems necessary for the purpose of carrying out the terms and provisions of such plan, take exclusive jurisdic-
[fol. 29] tion and possession of the company or companies and the assets thereof, wherever located. . . ."

The Commission takes the position before us that "Unless the conclusions of the Commission lack 'any rational and statutory foundation' they should not have been disturbed by the court below for the " 'fair and equitable' " rule of Section 11(e) . . . [was] inserted by the framers of the act in order to protect the various interests at stake. . . . The very breadth of the statutory language precludes a reversal of the Commission's judgment save where it has plainly abused its discretion in these matters.",[10] citing, among other authorities, Securities Comm'n v. Chenery Corp., (the second Chenery case) 332 U.S. 195, at pp. 207, 208. The court below takes a very different view, asserting that a "Section 11(e) court has the affirmative and independent duty to consider and find whether a proposed plan which has been approved by the Securities and Exchange Commission is fair and equitable.", citing its decision In the Matter of Interstate Power Company, D.C. Del., 71 F. Supp. 164.

The legislative history of the Public Utility Holding Company Act of 1935 throws some light on this vital question. The report of the Senate Committee which reported out the original bill states, "Section 11 provides that plans for the voluntary readjustment of the affairs of holding companies to conform with the section may be presented to the federal courts at any time and that in such cases those courts may exercise in the furtherance of such voluntary plans *all the extraordinary powers such courts have been accustomed to exercise when called upon under the Sherman and Hepburn act*[s] *to effect compulsory corpo-*

[10] Brief for the Securities and Exchange Commission, p. 17.

rate readjustments required by the public policy expressed in those acts. . . . " . . . "The title provides that *during all court processes the SEC will act as the impartial expert economic adviser and administrative assistant to the* [fol. 30] *courts.*[11] That expert assistance will enable the courts to save time and expense in the solution of essentially economic and administrative problems for which in the Sherman Act cases it had no assistance except that of opposing counsel." See Senate Report No. 621, accompanying S. 2796, 74th Cong., 1st Sess.[12] We think that it will not be contended that a district court of the United States adjudging a controversy arising under the Sherman Act would function other than as in an original equity proceeding, exercising all the powers and duties inherent in a court of equity under such circumstances.

The Congressional debates which attended the passage of the Act disclose that again and again members of Congress demanded and received assurances that the plenary jurisdiction and powers of the district courts of the United States would not be diminished or encroached upon by the functions allotted to the Commission under the law. S. 2796 as originally cast provided in regard to reorganizations under Section 11(d), (e) or (f), that if a trustee was to be appointed the court should appoint the Commission. The bill provided originally that "it shall be the duty of the court, to constitute and appoint the Commission as sole trustee." The Senate insisted, however, that the language should be changed so that the duty of the court to appoint the Commission as trustee was clearly permissive and not mandatory. This change was effected to the end that the powers of district courts of the United States would not be curtailed. Senator Wheeler stated that the jurisdiction of the courts would not be ousted "because the court has to approve the plan even though the Commission approves it." He went on to say: "In other words, there is really a *double-*

---

[11] Emphasis has been added at this and all later points of the opinion.

[12] The original bill suffered many changes and vicissitudes during its course through Congress but it should be noted that the provisions of Section 11(e) remained substantially unchanged. See S. 2796, 74th Cong. 1st Sess. introduced by Senator Wheeler on May 7 (Calendar day May 9), 1935.

check upon the plan, and final determination rests *as in the* [fol. 31] *past* in the courts." See 79 Cong. Rec. 8845, 74th Cong., 1st Sess. We think that by the words quoted Senator Wheeler conveyed the thought that the "check" to be made on a plan by the court was to be as full and complete as the "check" made by the Commission on the plan. We conclude also that by using the phrase "*as in the past*" the Senator made clear the concept that the court should fulfill the traditional function of a court of equity. See also the remarks of Senator Clark and Senator McKellar during the course of the debate. Senator Barkley also spoke to this point. Replying to a statement by Senator McKellar that the latter preferred to put the function of decision in respect to the appointment of receivers in the courts rather than in the Commission, Senator Barkley said that it was not the intent of the Act to tell ". . . the court how to decide the law, or as to equities among investors or *how a reorganization shall be brought about*. The appointment of receivers is an administrative matter which is to be performed by the court." While the Senate in the specific instances referred to was debating the function of appointing receivers, the intent of the debating Senators in respect to the power and duty of the district courts in regard to the approval or disapproval of plans of reorganization certainly was made manifest. For the debate see Cong. Rec. *supra* pp. 8937-9.

The interpretation of the Act by the Commission seems also to bear out the ruling of the court below that the district court's function in respect to the approval or disapproval of plans of reorganization is full, plenary and independent. A former chairman of the SEC, Mr. Ganson Purcell, testifying before the Securities Subcommittee of the Committee on Interstate and Foreign Commerce, House of Representatives, on "Study of Operations Pursuant to the Public Utility Holding Company Act of 1935", p. 873, Part 3, 79th Cong., 2d Sess., 1946, said that the stockholder's ". . . new interest [in reorganization] is gaged by his claim under the old security and his treatment must be found by the courts and the Commission to be fair and [fol. 32] equitable." Mr. Purcell also stated in respect to the enforcement of a plan in a district court of the United States that "That district court is . . . required to find under section 11(e) that the plan is fair and equitable, and

proper to carry out the provisions of section 11(e) [sic].[13] That decision of the district court is in turn appealable, and it can be taken to the court of appeals and to the Supreme Court of the United States." The testimony of Mr. Milton H. Cohen, a former Director of the Public Utilities Division of the SEC, at the same hearings is peculiarly telling on the point at issue. He stated that a federal district court, when called upon to enforce a plan pursuant to the provisions of Section 11(e), "on the basis of the record made before the Commission, holds full hearings on the plan, including briefs and oral argument, and then such court has the *independent duty* of determining whether the plan is fair and equitable and appropriate to effectuate the provisions of section 11(b)." *Ibid.* at p. 962.

The 10th Annual Report to Congress of the SEC, April 21, 1945, at pp. 91, 92 and 93, states, after making reference to the respective functions of the Commission and the district courts, "Thus security holders have the protection of findings as to the fairness and equity of plans by both the Commission and a United States district court", and "As has been said, security holders are not required to accept Section 11(e) plans unless they are found fair and equitable by both the Commission and a United States district court."

Turning now to the internal evidence contained in the Act itself as to the intent of Congress respecting the functions of a district court of the United States in an 11(e) proceeding, we find that subsection (e) lays upon the Commission in the first instance the duty of finding a plan, as submitted or as modified, "necessary to effectuate the provisions of subsection (b) and fair and equitable to the persons affected by such plan. . . ." The same subsection provides that the court ". . . shall approve such plan as [fol. 33] fair and equitable and as appropriate to effectuate the provisions of Section 11. . . ." The words employed respecting the respective duties of Commission and court are so alike that we must conclude that Congress intended to lay substantially the same duty on the court in the second instance as it imposed on the Commission in the first. Surely, had Congress intended that the district courts of the United States should exercise only the function of

---

[13] It is probable that the "(e)" is a typographical error and the reference was to subsection (b).

review, other and more appropriate language would have been employed. The duty of determining whether the plan is fair and equitable imposed on the district courts in its field apparently is very similar to that which devolves on the Commission itself within the latter's own province. We use the word "field" advisedly for of course limitations on the functions of the court in the exercise of its equity powers are imposed by the Act. These will be discussed at a later point herein. But one may not presume that the same words employed in a single subsection of a statute have dissonant meanings. It is conceded that the Commission must exercise an independent and plenary judgment in passing on the fairness and equity of the plan. Why then must it not be concluded that it was the Congressional intention that the district courts of the United States should do the same *in their own field?*

Subsection (e) goes on to employ the phrase that "the court *as a court of equity* may . . . take exclusive jurisdiction of the holding company's assets . . . . for the purpose of effectuating the plan . . ." We do not believe that it was the intention of Congress to cause a district court of the United States to function as a court of equity after it had approved a plan and not to function as a court of equity for the approval or disapproval of the plan. We think that Congress employed the phrase "as a court of equity" classically, intending to require the district courts in Section 11(e) proceedings to exercise in connection with the approval or disapproval of a plan the traditional powers of a court of equity in deciding that justiciable issue; [fol. 34] that is to say, to administer justice in the traditional manner of a court of equity. The history of the law of reorganizations supports this view as will be demonstrated hereinafter.

It is also interesting to observe that the last sentence of subsection (b) of Section 11 provides: "Any order made under this subsection shall be subject to judicial review as provided in section 24." The words are apt for creating a review function in the circuit courts of appeals. Contrast the language employed in subsection (e) which we have quoted above. Section 24(a) of the Act which, as indicated, sets up a means of reviewing the orders of the Commission by the circuit courts of appeals, provides that "The findings of the Commission as to the facts, if supported by substan-

tial evidence, shall be conclusive." This sentence or its equivalent is notably absent from Section 11(e).

It must be pointed out also that the Section 11(e) court may hear the application for approval of the plan only "after notice and opportunity for hearing" to those who may be affected by it. It is necessary therefore that notice be given in the proceeding to all security holders who may be affected in order that they may have the opportunity to be heard. Many, if not most, of these persons will not have appeared before the Commission. It was the manifest intention of Congress to give all persons who might be affected by the plan a day in court in an equity proceeding. If it should appear during the course of a proceeding in the Section 11(e) court that the record furnished by the Commission has grown "stale" for any reason, the court may "remand" the record to the Commission for the taking of further testimony and for reconsideration of the pertinent issues. This course was suggested in In re Midland United Co., 58 F. Supp. 667, 683. If during the hearing before the district court proof is submitted that cogent evidence has not been submitted to the SEC, the Section 11(e) tribunal may send the record back to the Commission to the end that the latter may take such further testimony as may be re-
[fol. 35] quired and for reconsideration of the pertinent issues and for new recommendations respecting the plan of reorganization. The proceedings before the equity reorganization court are not strictly *de novo* since the district court can only approve a plan when it has been approved by the Commission. See Application of Securities and Exchange Commission, D. C. Del., 50 F. Supp. 965, 966. This does not mean, however, that the Section 11(e) court may not receive evidence *aliunde* the Commission's record respecting the fairness and equity of a plan. It may decide upon the new evidence and that contained in the Commission's record that the plan is unfair and inequitable and remand the proceeding to the Commission for further consideration; or it may remand without taking new evidence, pursuing the course outlined at an earlier point in this paragraph.

It seems improbable to us that Congress intended that the district courts of the United States should be limited to the function of mere review under the Public Utility Holding Company Act, the only federal reorganization statute by the terms of which security holders are not per-

mitted to vote their approval or disapproval of a proposed plan of reorganization and to prevent its operation if the holders of the requisite amounts of the securities affected are not in favor of it.

The history of the law of reorganizations tends to support the view that a Section 11(e) court must function as an equity reorganization tribunal. Equity receiverships first were employed to effect corporate reorganizations. The powers of the courts of chancery were exercised to make certain that creditors and security holders were treated fairly and equitably. The powers of the court were in nowise circumscribed.[14] While corporate insolvency, sometimes technical, was made the usual touchstone of jurisdiction, when jurisdiction had been secured the court func- [fol. 36] tioned with the plenary powers of a court of equity. Later, the reorganization of insolvent corporations was effected under Section 77B of the Bankruptcy Act, 11 U. S. C. A. § 207 et seq. The district courts of the United States then had to determine as courts of equity whether the plan was "fair and equitable and does not discriminate unfairly in favor of any class of creditors and stockholders; and is feasible". When Chapter X, 11 U. S. C. A. § 501 et seq., supplanted Section 77B the district courts were required to find, if approval was to be given to a plan of reorganization, that it was "fair and equitable, and feasible". There can be no question but that district courts of the United States in approving or disapproving a plan of reorganization for a company not within the purview of the Public Utility Holding Company Act submitted in a 77B or a Chapter X proceeding are required to exercise their full and independent equity powers in the classic pattern of reorganization courts. This was recognized by the Supreme Court in Vanston Committee v. Green, 329 U. S. 156, 165, wherein Mr. Justice Black stated: "A Chapter X or § 77B reorganization court is just as much a court of equity as were its statutory and chancery antecedents."

---

[14] For classic examples of the application of tests by a court of equity see the decisions of the Court of Chancery of Delaware in Hauer v. Appalachian Gas Corp., 19 Del. Ch. 283, 167 A. 839, and in Eastern States Public Service Corp. v. Atlantic Public Utilities, Inc., 17 Del. Ch. 338, 156 A. 214.

If the company to be reorganized pursuant to the provisions of Chapter X is a public utility holding company within the purview of the Public Utility Holding Company Act the proposed plan of reorganization must be submitted first to the SEC under Section 172 of the Bankruptcy Act, 11 U. S. C. A. § 572, and the Commission must first find it to be fair and equitable before it may be submitted to a district court for the latter's approval. When the Commission has found the plan to be fair and equitable and it is then submitted to a district court, that tribunal, if it is to find the plan to be fair and equitable, must exercise its independent judgment pursuant to Section 174 of the Bankruptcy Act, 11 U. S. C. A. § 574 in arriving at such a conclusion. The District Court of Delaware so held, by the present writer, in In re Midland United Company, *supra* [fol. 37] at p. 683. In the cited case it was pointed out, however, that Section 172 of the Bankruptcy Act provides that the report of the Commission on the plan "shall be advisory only". The section cited was added to the Bankruptcy Act by Congress on June 28, 1938, c. 575, Section 1, 52 Stat. 840, almost three years after the effective date of the Public Utility Holding Company Act. The inference is possible in view of the proviso of the later statute that Congress had intended in respect to a proceeding arising under Section 11(e) of the Public Utility Holding Company Act that a report on the plan by the SEC should be more than "advisory" to a district court passing on the fairness and equity of the plan. It is very clear both from the express language of Section 172 and from its legislative history what Congress intended the functions respectively of the Commission and the court to be in the bankruptcy proceeding. See the Senate Report accompanying the bill.[15]

[15] S. R. 1916, 75th Cong. 3d sess. p. 30, states that "Section 172 provides the courts with the administrative assistance of the Securities and Exchange Commission in the complex and difficult task of examining plans of reorganization. It contemplates that after the hearings provided in 169 or 170 the number of practicable plans will be reduced to one or two in number. At this stage it is required that the court shall in cases where the debtor's scheduled indebtedness exceeds $3,000,000 refer the plan or plans which it regards as worthy of consideration to the Securities and Exchange Commission for examination and report. In

In providing means for the reorganization of railroads Congress in enacting Sections 77(d) and (e), 11 U. S. C. A. §§ 205(d) and (e) provided that the Interstate Commerce Commission should certify the plan of reorganization with a transcript of the proceedings before it and its order, to the appropriate district court which, after notice to the parties in interest, and hearing, shall approve the plan if, *inter alia*, the court is satisfied that the plan is "fair and equitable. . . . ." Subsection (d) provides that the plan shall not be approved by the court unless it has first been [fol. 38] approved by the Commission. We are of the opinion that Congress intended the district courts of the United States, within the limitations of the statute, to function as equity reorganization courts. Though the Commission must make the primary determinations respecting the plan, including in particular those relating to valuations of railroad securities, the court must exercise its own independent judgment in approving or disapproving the plan whether the court's rulings relate to value or to some other pertinent subject. See In re Erie R. Co., 37 F. Supp. 237, 243-5, aff'd, 6 Cir. 133 F. 2d 730, cert. den. 320 U. S. 748. In Palmer v. Massachusetts, 308 U. S. 79, 87, the Supreme Court, by Mr. Justice Douglas, said that the judicial process in bankruptcy proceedings under Section 77 is brigaded with the administrative process of the Commission. The Court also stated that ". . . . . the whole scheme of § 77 leaves no doubt that Congress did not mean to grant to the district courts the same scope as to bankrupt roads that they may have in dealing with other bankrupt estates." We think that the limitations imposed by the statute are largely procedural, operative in the respective fields specified by Congress to Commission and court, and do not substantially circumscribe the general equity jurisdiction of the reorganization tribunal.

Whether the reorganization is to be consummated by way of equity receivership, by action under Section 77B, by suit under Chapter X, by a proceeding under Section 77 or by petition to a district court under Section 11 (e)

---

cases involving a scheduled indebtedness which is less than $3,000,000 such plans may be referred to the Commission. In either case the Commission's reports are advisory only. There is no division of jurisdiction. Ultimate approval or disapproval of plans is left solely with the judge."

of the Public Utility Holding Company Act, the critical phrase employed alike by courts of equity and by Congress in framing the test under which a plan shall be approved or disapproved, has always embraced the phrase "fair and equitable" or its substantial equivalent. In the light of this very pertinent circumstance we cannot think that the power and functions imposed on the district courts of the United States vary much from statute to statute and from case to case. If the proceedings be any one of those enumerated in the foregoing sentence a district court must [fol. 39] function as an equity reorganization tribunal with the powers and functions of such a court, and not as a mere review court.

Insofar as we are aware the Commission in this circuit prior to the instant case has not taken the position that a Section 11 (e) court (any proceeding under Section 77B or Chapter X aside) is not an equity reorganization tribunal but serves only as a court of review. The instant case aside the learned District Judge has passed on twenty-seven reorganization plans brought to the District Court of Delaware by the Commission pursuant to Section 11 (e).[16]

In the Matter of North American Gas & Electric Co.

case Judge Huhen said, "The Commission found that the plan was 'entirely appropriate' to comply with its orders. These are matters peculiarly within the discretion and power of the Commission and if based on evidence, we deem this court bound by the finding." But in Commonwealth and Southern Corp. v. Securities and Exch. Com'n, 3 Cir., 134 F. 2d 747, 753, this court took the position that stockholders, whose rights were affected by an order of the Commission directing a public utility holding company to change its corporate structure, had a right to a full hearing in the district court of the United States in which the Commission was seeking approval of the reorganization plan. In our decision in In re Securities and Exchange Commission,[17] 142 F. 2d 411, 422, citing Southern Corp. v. Securities and Exch. Com'n, *supra*, respecting the necessity for full hearing before the district court, we stated that: [fol. 41] ". . . . stockholders whose rights were affected by an order of the Commission directing a public utility holding company to change its corporate structure had a right to be heard in that District Court of the United States in which the Commission was seeking to effect its order; that otherwise those stockholders would be deprived of property without due process of law." It follows that the proceeding before the District Court cannot be deemed to be a summary one. Moreover, the fact that notice is to be given to persons affected by the plan shows that the theory of submission to the district court is substantially similar to that required in respect to a plan made pursuant to the provisions of Section 77B or Chapter X of the Bankruptcy Act." We conclude that the issues which may be presented to the district court are limited only by the terms of the statute. Any question which goes to the issue of what is fair and equitable may be raised and must be passed upon. Reference also is made to the concurring opinion in Lownsbury v. S.E.C., 3 Cir., 151 F. 2nd at p. 219. Cf. In re Standard Gas & Electric Co., 3 Cir., 151 F. 2d 226, 331, in which, however, the question here presented was not in focus. See the decision in Okin v. S.E.C., 2 Cir., 145 F. 2d 206, 207, wherein it was stated, "The provisions of Section 11 compel

[17] The United Light & Power Company case. Decided by the Supreme Court *sub. nom.* Otis & Co. v. S.E.C., 323 U. S. 624

full review of an order . . . [of the Commission approving a plan of reorganization] in a district court for all parties in interest. . . ." The Court of Appeals for the Second Circuit was of the opinion in the Okin case that an order of the Commission approving a plan of reorganization was purely interlocutory in nature while that of the district court approving the plan was the effective or final order.

The decision of the Supreme Court in the second Chenery case, *supra*, as has been indicated, is heavily relied on by the Commission. But that decision must be read in the light of the circumstances of the cited case. The proceeding was under Section 24(a) of the Public Utility Holding Company Act. While reference was made to Section 11(e) in the course of Mr. Justice Murphy's opinion, [fol. 42] *Ibid.* at p. 208, it was not held that the proviso of Section 24(a), "The findings of the Commission as to the facts, if supported by substantial evidence, shall be conclusive.", should be read into Section 11(e). The Supreme Court was not passing in any way on the powers and duties of a Section 11(e) court. In the Chenery case the Court had before it questions relating to a rule of conduct prescribed by the Commission in the course of "[its] ordinary administrative action". The Court stated that its duty of examination is at an end ". . . when it becomes evident that the Commission's action is based upon substantial evidence and is consistent with the authority granted by Congress . . ." *Ibid.* at p. 207. The Chenery decision in our opinion cannot be deemed to be controlling in the case at bar.

We are of the opinion that a Section 11(e) court must exercise its full and independent judgment as to the fairness and equity of the plan. In stating this we do not mean to imply that Congress intended to grant a Section 11(e) court the same full and untrammeled scope that a court of bankruptcy would have in a Chapter X proceeding. For analogy see Palmer v. Massachusetts, *supra*. The SEC must first make sure that the plan of reorganization fulfills the purposes of the Act, must value the securities involved in the plan and must decide in the first instance whether the plan is fair and equitable. The court may not pass on a plan until it has been approved by the Commission and cannot approve a plan which has not been approved by the Commission. The court may not

substitute its valuations for those of the Commission, but it may reject valuations made by the Commission in fulfilling its, the court's statutory function in determining whether the plan is fair and equitable. The court of course may not act capriciously in rejecting valuations made by the Commission nor may the Commission act with caprice in valuing securities. The judicial process is brigaded with the administrative process of the Commission but this does [fol. 43] not mean that the court in the field allocated to it by Congress is not to exercise its independent, plenary judgment as an equity reorganization tribunal upon every matter relating to the fairness and equity of the reorganization.

In the light of the foregoing we cannot hold, as the Commission contends we must, that unless the conclusions of the Commission lack rational or statutory foundation they may not be disturbed by the Section 11 (e) court, or that a reversal of the Commission's judgment by the court may not be effected save where the Commission has plainly abused its discretion. We conclude that it was the duty of the court below to function as an equity reorganization tribunal within the limitations prescribed by the Act. The findings and conclusions of the Commission were not binding upon the learned District Judge though, as was proper, he treated them with respect. He weighed the numerous elements involved in the case, albeit on his own scales, and in the exercise of his independent judgment, arrived at the conclusion that the plan was not fair and equitable. The examination made by the District Court of the relevant factors was careful and far-reaching. The District Judge attached substantial weight to elements or factors which the Commission apparently did not deem to be of importance. For example, he laid emphasis on the market and dividend histories of all the securities and the losses which were indubitably occasioned to the holding company enterprise by the sale of securities from Engineers' portfolio because of the divestitures required by the Act. Neither the Commission nor the court, in what we consider to have been a proper application of one of the principles enunciated by the Supreme Court in Otis & Co. v. S.E.C., (The United Light & Power Company case) 323 U. S. 624, 637, treated the charter provisions of Engineers as dispositive of the issues presented. While the court deemed the liquidation of Engineers to be an involuntary one and pointed to deci-

sions [18] where, under charter provisions similar to those of [fol. 44] Engineers no premium was allowed, he treated the involuntary liquidation provision of Engineers' charter as but one factor to be employed in determining the values of the preferreds. The Commission for its part treated the "call" provisions of Engineers' charter only as "stoppers" to prevent the "investment values" of the preferreds from exceeding the premium or call prices. But the weight and emphasis applied by the court and the Commission to the various factors in the case go, we think, to the two respective primary considerations which brought the Commission to a conclusion that the plan was fair and equitable and the court to a finding that it was not.

The reasoning which moved the Commission is not as plain as it might be. But we think it is clear that it did not give any substantial consideration to the future earning power of Engineers and its subsidiaries which the Supreme Court has held is one of the fundamental tests for reorganization valuation. See Consolidated Rock Products Co. v. Dubois, 312 U. S. 510, 526, and Group of Investors v. Milwaukee R. Co., 318 U. S. 523, 565-6. In the instant case the Commission made no attempt to ascertain the future earning power of the system nor to apportion earning power between the preferreds and common based on their respective claims to income as it did in The United Light & Power Company case. But if values for the securities are to be determined *ex* the Act it is clear that the Commission should have done so. What the Commission has done is to consider the investment values of the preferred *ex* the Public Utility Holding Company Act, i.e., as if the Act had never been passed. But it considered only the preferreds on this basis. It seems to have omitted consideration of the common by a similar standard. It made no finding as to the "value" of the common stock. The Commission's action may not be upheld merely because such a finding possibly could have [fol. 45] been made. "The grounds upon which an administrative order must be judged are those upon which the

[18] See the cases cited in note 6 supra. See also City National Bank & Trust Co. v. S.E.C., 7 Cir., 134 F. 2d 65; Massachusetts Mutual Life Insurance Co. v. S.E.C., 8 Cir., 151 F. 2d 424, cert. den. 327 U. S. 795; In re Standard Gas & Electric Co., 3 Cir., 151 F. 2d 326; and New York Trust Co. v. S.E.C., 2 Cir., 131 F. 2d 274, cert. den. 318 U. S. 786.

record discloses that its action was based.'" See Securities Comm'n v. Chenery Corp. (the first Chenery case), 318 U. S. 80, 87. "There is no such finding here." *Ibid.* at p. 94. Under the plan the common stock is excluded from the holding company enterprise as effectively as are the preferred for the common under the plan will receive participation only in operating companies. The fact is that the holding company enterprise is at an end, both for preferreds and common. The Commission apparently has disregarded this fact which supplies the substantial difference between the instant case and The United Light & Power Company reorganizations. In the latter case the security holder participation in the enterprise was shifted from the top holding company to a subsidiary holding company but the holding company enterprise as such continued. In the instant case the Commission ascribed "investment value" to the preferreds but failed to make a similar approach to the common. The result is that the Commission has attempted to value the securities of Engineers both *ex* the Act and *intra* the Act. We have used the phrase "attempted to value" advisedly for we think that in the employment of the formula of "investment value" the Commission erred in the light of the decision of the Supreme Court in the Otis & Co. case for the reasons set forth at a later point in this opinion. The court refused to approve the Commission's action deeming it to embrace an improper exercise of the Commission's administrative discretion. In determining whether the plan was fair and equitable the court valued the securities *ex* the Act, considering the holding company enterprise to be at an end as it is in fact.

The anomaly of the Commission's general position is made all the more apparent, we think, by its failure to consider the substantial losses which occurred to Engineers by virtue of divestitures compelled by the Act. The loss in Puget Sound Power & Light Co. stock will serve as an [fol. 46] example. The Commission allowed to Engineers only 3% of Puget Sound's new common stock in exchange for 99.3% of the old common stock. The allocation was based on the Commission's determination that the future earning power of Puget Sound available for the stocks would lie somewhere between $2,657,000 and $3,083,000. See Puget Sound Light & Power Co., 13 S.E.C. 226, 243-244. The net profits from the stock of Puget Sound in 1946 were $5,325,320 and for the twelve months ending June 30, 1947,

were $5,067,419.[19] Another instance of loss to Engineers by reason of divestiture compelled by the Act lies in Engineers' disposition of its interest in El Paso Natural Gas Company. Under this divestiture Engineers lost a profit of at least $4,000,000. We desire to make it clear that we do not criticize, or even suggest criticism of, the Commission because of its orders compelling these divestitures which were required by the Act. Hindsight demonstrates facts which foresight, however apt or well-informed, may not be able to foretell. But if the Commission is to make valuations *ex* the Act in respect to the preferreds, it must do likewise in respect to the common. The difficulty with the Commission's position in this connection, the formula of "investment value" aside, lies in the fact that while it has attempted to appraise the preferreds (as distinguished from the common) *ex* the Act its basis of valuation, insofar as it has composed one, lies in factors which have come to existence because of the impact of the Act. Paradoxically, though the paradox is more apparent than real, if the equitable equivalents for relinquished securities are to be arrived at by the Commission under the doctrine of the Otis & Co. case, *ex* the Act, losses of the sort referred to in this paragraph must be weighed into the calculation, i.e., such losses should be returned to the credit side of the enterprise's balance sheet as a matter of bookkeeping.

The selection of possible though varying techniques is for the Commission in the exercise of its expert adminis- [fol. 47] trative judgment. But whatever technique is chosen it must be employed consistently throughout the entire operation of valuation. We do not say the Commission must approach the problem *intra* the Act or *ex* the Act as the Commission purports to have done in the instant case. Either course consistently followed could, we think, lead to just and appropriate valuations. No particular, specific approach is to be nailed to the Commission's head. The Commission must, however, approach the problem of valuation with a full view of all the pertinent factors employing the same scales and the same measure throughout.

In conclusion upon this point we state that in our opinion the Commission in attempting to apply the "invest-

[19] See Moody's Public Utility Manual (1947) at p. 53 and Suppl. Vol. 19, at p. 1914.

ment value" test to the Engineer's preferreds, even to the limited extent hereinbefore indicated, has misunderstood the principle of "equitable equivalents" enunciated by the Supreme Court in the Otis & Co. case. We can perceive no reason why the doctrine of equitable equivalents cannot include within its ambit cash for securities as well as securities for securities. Perhaps, strictly speaking, cash is not an equitable equivalent for securities. But cash certainly may be an adequate recompense for the security relinquished and if it be a just recompense, the exchange will be equitable. In the Otis & Co. case the Supreme Court held that a distribution of assets might be made between different classes of securities without dollar valuation if each security holder received the equitable equivalent of what he had surrendered. 323 U. S. at pp. 639-640. We do not understand, however, that the principle of the Otis & Co. case would preclude giving the security holder money in lieu of his security if the cash which he would receive would be just recompense for the security which he would give up. We conclude, therefore, that the doctrine of equitable equivalents may properly be applied where money is to be given for securities and where securities are to be allocated for securities as in the instant case. The difficulty in sustaining the Commission's position in respect to "in-[fol. 48] vestment value", even insofar as the Commission has applied that value, lies in the fact that investment value is and can be only *one* of a series of factors to be used in arriving at equitable equivalents. We conceive that the Commission could make a finding under certain circumstances that investment value was the equitable equivalent to the security holder. The Commission in the instant case, however, has not made such a finding and we do not believe that such a finding could be supported on the present record. In determining equitable equivalents the Commission must weigh all pertinent factors to the end that the security holder may receive as nearly as may be the equivalent of that which he is giving up. All pertinent factors and all substantial equities must be considered by the Commission whether equitable equivalents are to be reached by the approach *ex* the Act or the approach *intra* the Act. The new doctrine of investment value presently urged by the Commission may not be substituted for the doctrine of equitable equivalents enunciated in the Otis & Co. decision.

For the reasons stated we concluded that the District Judge did not err when he found that the plan as submitted by the Commission was unfair and inequitable. Certainly we cannot say that this conclusion was clearly erroneous.[20]

Though a district court of the United States sitting pursuant to the provisions of Section 11 (e) may reject a plan, it cannot value the securities, find equitable equiva- [fol. 49] lents therefor and substitute its own estimates for those of the Commission requiring the plan as amended by it to be carried out. To put the matter briefly, a district court may reject but not amend the plan. The court below, therefore, erred in one particular. It entered an order approving and enforcing the plan as amended by it. It was without power to do this. The provisions of Section 11 (e) make it clear that the Commission in the first instance must approve the plan and find it to be fair and equitable. If, as here, the district court disagrees with the conclusion of the Commission that the plan is fair and equitable, it must refuse to approve the plan and "remand" the record to the Commission for further and appropriate action by it.

The action which the Commission may take will, of course, be limited by the fact that with its approval, evidenced by its opposition to the appellant Streeter's motion

---

[20] Judge Leahy's opinion is entitled to especial weight by virtue of his familiarity and experience with Section 11 (e) proceedings and plans of reorganization under the Act. See R.F.C. v. Denver & R.G.W.R. Co., 328 U. S. 495, 533, and Rule 52, R.F.C.P., 28 U. S. C. A. foll. § 723c.

We are informed by the Chief of the Bureau of Procedural Studies and Statistics of the Administrative Office, United States Courts, that up to February 11, 1948 the Securities and Exchange Commission had filed 63 petitions in the District Courts of the United States seeking approval of plans of reorganization pursuant to Section 11 (e) of the Public Utility Holding Company Act and that 27 of these had been filed in the District Court of the United States for the District of Delaware. See also note 16 *supra*. Approximately forty-two percent of all plans of reorganization submitted by the Commission under Section 11 (e) to the District Courts of the United States, therefore, have been submitted to Judge Leahy in the court below.

to stay which this court denied, the plan has been carried into effect, with the exception of the payment of the premiums which the district court disapproved. Under the escrow agreement which the Commission approved funds which are sufficient to pay all or any part of these premiums have been withheld from distribution, however, and the escrow agreement accordingly delimits the area in which the plan to be approved by the Commission and district court must fall. The problem is and will remain, until its disposition by the Commission, one of valuation of the securities of Engineers, viz., the preferreds and the common.

The escrow provisions of the plan are proper in our opinion. The objections asserted thereto need not be discussed in this opinion.

[fol. 50] The decree of the court below is vacated and the cause is remanded with the direction to enter an order disapproving the plan as not being fair and equitable within the purview of Section 11 (e) of the Public Utility Holding Company Act, and to return the record to the Commission to the end that it may take such action as the facts and the law may require.

SECURITIES AND EXCHANGE COMMISSION, Appellant

JUDGMENT—March 19, 1948

Present. Biggs, Albert Lee Stephens and Maris, Circuit Judges.

Appeal from the District Court of the United States, for the District of Delaware

This cause came on to be heard on the transcript of record from the District Court of the United States, for the District of Delaware, and was argued by counsel.

On consideration whereof, it is now here ordered, adjudged, and decreed by this Court that the decree of the said District Court in this cause be, and the same is hereby vacated with the direction to enter an order disapproving the plan as not being fair and equitable within the purview of Section 11 (e) of the Public Utility Holding Company Act of 1935 and to return the record to the Commission to the end that it may take such action as the facts and the law may require.

Biggs, U. S. Circuit Judge.

March 19, 1948.

[File endorsement omitted.]

[fol. 53] IN THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT

[Title omitted]

PETITION FOR REHEARING OF SECURITIES AND EXCHANGE COMMISSION—Filed April 3, 1948

The Securities and Exchange Commission, appellant, respectfully requests rehearing in this cause. The grounds for this petition are as follows:

1. This Court's opinion appears to rest upon a resolution of issues which the Commission has not heretofore had an opportunity to meet and the resolution involves a misconception of the Commission's reasons for approval of the plan.

2. The opinion contains the seeds of future controversies as to what the Commission is expected to do upon remand and is susceptible of the construction that it imposes upon the Commission both a legally irrelevant and an administratively impractical task.

A. The Court, after agreeing with the Commission and the district court, that under the Otis case Engineers' [fol. 54] liquidation preference is not dispositive, states that the Commission has a choice of valuation techniques and may value either "*intra* the Act" or "*ex* the Act." If in upholding the Commission's power to value "*intra* the Act" the court means that the Commission may treat the liquidation preferences as dispositive and no other interpretation of the phrase "*intra* the Act" has occurred to us, this would seem to be in conflict with the court's ruling as to the impact of the Otis case.

B. It is not clear whether the Commission is required upon remand to value the preferred and common stock of Engineers, with reference to the assets of Engineers as actually constituted at the time of the plan or after a hypothetical reconstitution of the Engineers system as it would have existed at that time if the Act had not been passed.

C. If the Commission is free to value the stocks of Engineers with reference to Engineers' assets as constituted at the date of the plan, then the mandate would merely lead

to a statement in different terms of what is implicit, if not explicit, in the findings which the Commission has already made. Since neither the District Court, nor this Court, has disagreed with the Commission's appraisal of the situation existing as of the date of the plan, such a restatement of the Commission's findings without more would neither require nor permit the Commission to approve a different allocation of cash to preferred stockholders than that which the Commission has already approved and which the District Court has disapproved.

[fol. 55] D. Intimations in the Court's opinion that the Commission should determine the value of Engineers' assets, as if the Act had not been passed, rest upon the assumption that losses have been caused by the operation of the Act. But if such losses were both demonstrable and measureable it would not be fair or equitable to require Engineers' preferred stockholders to compensate its common stockholders in whole or in part for such losses. To impose such a requirement would violate the principle of strict priority by shifting the primary incidence of the risk of losses from junior to senior security holders, and would constitute collateral attack upon transactions which have been consummated pursuant to Commission and court orders no longer open to review or appeal.

E. Any requirement that the Commission determine as a fact on the basis of evidence whether there have been losses to Engineers as an entity, or to its common stockholders, as a result of the over-all application of the Act would be to impose an impossible administrative task both in this case and in relation to the general administration of the Act.

3. The holdings in the court's opinion with respect to the applicable standard of judicial review are believed to be erroneous at least insofar as it is held, with respect to the issues presented in this case, that the District Court would be authorized to reject the determinations of the Commission on grounds which would not be open to a circuit court of appeals upon direct review of the Commission's orders, or upon grounds which this Court would not be free to re-[fol. 56] examine on appeal from the District Court's order. While we note the extent of our disagreement with the court's views on this point, we believe the relevant considerations have already been fully presented and considered

and therefore do not seek to present anything further with reference to the issue of the scope of review.

4. Statements in this Court's opinion with respect to the power of the Section 11 (e) enforcement court to take new evidence, while not necessary to the decision, are contrary to a long course of decisions in this and other circuits and if followed would open up avenues of delay which could seriously impede the administration of the Act.

Argument

This Court has agreed with the Commission and the District Court that under the *Otis* case the charter involuntary liquidation preference is not "dispositive" of the amount of cash payable to Engineers' preferred stockholders. Despite statements as to the breadth of discretion in the District Court, this Court has also held, we believe, that a District Judge's weighing of "colloquial equities" is not the proper method of arriving at the amount of cash payable to preferred stockholders. Instead this Court has held that (a) allocation is to be determined according to a valuation technique, (b) valuation is the statutory function of the Commission, and (c) "the selection of possible though varying techniques is for the Commission in the exercise of its expert administrative judgment." The Dis- [fol. 57] trict Judge is upheld in rejecting the plan as submitted by the Commission because this Court found the Commission to have been inconsistent in its own approach, and to have misunderstood the principle of equitable equivalents enunciated in the *Otis* case, but the District Judge is held to have erred in substituting his own determination of the fair and equitable amount for that found by the Commission.[1] The plan is remanded to the Commission

---

[1] If the ruling is that the Commission is bound by the District Judge's determination as to amount, then we believe that no remand to the Commission would be necessary, because the Commission has already contingently approved an alternative allocation of cash to preferred stockholders at the amount of the liquidation preference if as a result of the processes of review in the District Court and on appeal therefrom this should be judicially determined fair and equitable.

for what this Court holds would be a more consistent application of the technique chosen.

This Court's criticism of the Commission's approach, its related statements as to the inadequacy of the Commission's findings, and its direction as to what the Commission should do on remand, present issues which the Commission has not heretofore had an opportunity to meet. In any event, the Commission respectfully requests a more explicit statement of what it is required to do upon remand.

The opinion states, with reference to the Commission's use of the technique described as computing the investment value of the preferred stocks of Engineers "*ex* the Act;" that "the reasoning which moved the Commission is not as plain as it might be." By restating that reasoning in terms of what the Commission has done and said in this and other [fol. 58] cases, and heretofore with judicial approval, it is our hope to correct what we believe is a complete misinterpretation of the Commission's technique employed in this case. That misinterpretation appears to us attributable largely to the use by counsel and witnesses in this case, and to a more limited extent by the Commission itself, of an unfortunately vague shorthand expression for a conception which had been more fully articulated in prior cases.

I

The Commission has not been inconsistent in the employment of the valuation technique which it selected

A. The Commission has not attempted to value either the preferred or common stocks of Engineers as though the Holding Company Act had not been passed

The Commission believes that any attempt to reconstitute an eventful decade in the history of the Engineers system and of the holding company industry as well, as though the Holding Company Act had not been passed, would be an even more impossible task than that which the Supreme Court rejected in *Taylor* v. *Standard Gas & Electric Company*, 306 U. S. 307 (1939).[2]

[2] In that case the Court stated that it would be impossible to recast the history of a single operating company to show what would be its condition if holding company acts of mismanagement had not occurred. See 306 U. S. at 323.

[fol. 59] Confronted with the task of bringing about a sweeping reorganization of the more than 15 billion dollar industry subject to the Act, the Commission has necessarily adopted a step by step approach. This Court has recognized in another connection that such an approach is a proper one. See *Commonwealth & Southern Corporation* v. *S. E. C.*, 134 F. 2d 747, 754 (C. C. A. 3, 1943). If the Commission had been required to do the entire job of bringing about compliance with Section 11 in one comprehensive order for each holding company system, the issues of fact and law presented would have been so multifarious as to preclude the conclusion of administrative hearings, let alone the subsequent course of judicial review, without making the process interminable. But use of the step by step approach would be without substantial value unless each step could be treated as a unit to be appraised with finality in its impact upon investors and consumers and subject to judicial review only within the time limits prescribed by the statute as applicable to individual Commission orders.[2a]

In accordance with this step by step approach, and likewise we believe in conformance with universally applicable reorganization practice, the Commission has treated each reorganiaztion plan presented to it as a unit and has applied [fol. 60] the fair and equitable standard for the purpose of determining, with respect to the impact of the particular plan, whether what each class of security holders receives under the plan is the equitable equivalent of the rights surrendered as a result of the plan. In doing so it has invari-

---

[2] In the present case the District Judge said (R. 292a):

"I do not consider the argument advanced as to what these series of preferreds would be worth if there were no Public Utility Holding Company Act. I do not think it profitable to consider an argument based on unreality for *there is a Public Utility Holding Company Act.* Unless one subscribes completely to the doctrine of foreordination, things might always be different from what they are."

The Commission is in complete agreement, although it does not regard the observation as applicable to the valuation technique which it has used in this and other Section 11 (e) plans.

[2a] Prospective orders under Section 11 (b) are expressly subject to modification for change of circumstances.

ably, and we believe inevitably, made its appraisal in the light of the then existing assets and liabilities of the company undergoing reorganization.[3]

B. The Commission has merely valued the rights surrendered by the plan according to their worth apart from the reorganization.

The opinion states: "The new doctrine of investment value presently urged by the Commission may not be substituted for the doctrine of equitable equivalence enunciated in the Otis & Co. decision." It is elsewhere stated that the Commission has misunderstood the doctrine of the *Otis* case. But the Commission in valuing the rights surrendered by the Engineers' plan as if the instant reorganization were not occurring, was not employing, we submit, a novel tech- [fol. 61] nique.[4] It was following the only possible method

---

[3] Of course there are circumstances where this mere financial appraisal is not conclusive. Thus the Commission has treated the occasion for reorganization as an occasion for enforcing an accountability for past inequitable conduct thought to warrant subordination or limitation to cost of particular claims. Thus many of the cases under Section 11 (e) of the Act have involved an issue as to whether a parent holding company's ostensibly prior claim should be subordinated to publicly held junior securities in the application of the principles of *Taylor* v. *Standard Gas and Electric Corporation*, 306 U. S. 307 (1939). Limitations to cost of management securities purchased in the course of the reorganization have presented to the Commission a comparable problem. See *S. M. C.* v. *Chenery Corporation*, 67 Sup. Ct. 1575 (1947). We do not understand this Court to have ruled, however, that any such basis exists in this case for limiting the claims of Engineers' preferred stock, vis-a-vis the common stockholders who have voting control.

[4] The question of whether it was novel or inconsistent with such cases as *New York Trust Co.* v. *Securities and Exchange Commission*, 131 F. 2d 274 (C. C. A. 2, 1942) cert. den. 318 U. S. 786, for the Commission to treat the liquidation preference as not dispositive has heretofore been fully argued (Commission main brief, 23-24, reply brief, pp. 17-19). On this point both the district court and this court have upheld the Commission.

of drawing a comparison between the new rights received through the plan and the old rights surrendered by the plan.

We believe this statement is best illustrated by a description of the reorganization process in situations where there is not likely to be any dispute as to the nature of the valuation process required. A simple illustration is afforded by a mere recapitalization of a solvent company where the same corporation continues, and with the same assets, but existing security holders receive a new type of security in exchange for what they give up. Here the comparison of the prospects for receipt of income and the risk factor in relation to both the new and old securities necessarily involves valuing the old securities as if they remained outstanding, i.e., as if there were no reorganization.[5] Other [fol. 62] types of plans may require different techniques in the appraisal of that which is received under the plan but

[5] If the plan contemplates a new corporation to carry on the old business, the old securities are valued as if the old corporation continued in existence. If the plan contemplates addition or subtraction of assets the old securities are valued as if the business operations continued with the existing assets. If the plan contemplates liquidation of a holding company and distribution of its assets among existing security holders, whatever weight may be given (by reason of tax savings, for example) to the prospective disappearance of the holding company in valuing the new securities, the old securities are valued as if the holding company continued in existence. On the other hand, the process of valuing the rights surrendered by a plan does take into account, for their impact on prospective earnings, any changes which could be effected apart from the reorganization itself: for example, the possibility of refunding at a saving in interest or dividend claims, outstanding securities of the company or its subsidiaries not affected by the plan. In some instances the very securities which are dealt with in the plan itself might have been refunded apart from the plan, and in that event this possibility is also relevant to the valuation process.

Past action taken in compliance with the Holding Company Act, and indeed foreseeable future action to comply with the Act, would in our opinion be significant only where such events shed any light upon the future earning power of the assets dealt with by the plan.

always the process of valuing what is surrendered remains the same—one of forecasting on an as if basis what the old securities would be worth if the reorganization did not occur.[6] The Commission has described this process in a num- [fol. 63] ber of decisions, including the findings upheld in the *Otis* case, as valuing the old securities (in relation to the new), "as though in a continuing enterprise." *The United Light and Power Co., et al.*, 13 S. E. C. 1, 9. In upholding the Commission the opinion of the Supreme Court states: "The Commission recognizes and applies the doctrine of full priority by giving value to the rights of the preferred in a going concern rather than as if by sale and distribution." *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 635 (1945).

If Section 11 (e) of the Holding Company Act stood alone and the Act merely authorized but did not compel fair and equitable reorganizations to simplify holding company systems, we believe this statement of the reorganization process would be so obvious in its application as to be taken for granted without express statement. However, both in the *Otis* case and in the *Engineers* case the problem was

[6] We are confining the discussion in the text to the hypothesis of a solvent company. In dealing with matured claims in bankruptcy, the face amount of the matured claim is commonly treated as the measure of that which is surrendered. At least for the purpose of determining whether junior interests participate at all, the assets are valued by capitalization of prospective earning power to see if they are worth the face amount of the debt claims. See *Consolidated Rock Products Co.* v. *DuBois*, 312 U. S. 510, 526. Even in bankruptcy it has been held permissible, however, to measure the treatment of railroad bondholders with reference to an equivalence between the securities surrendered and the securities received without placing a dollar value upon the securities received or relating such a value to the face amount of the old debt claims surrendered. See *Group of Institutional Investors* v. *Chicago, Milwaukee, St. Paul and P. R. Co.*, 318 U. S. 523, 565-6. This Court has held such a valuation technique to be applicable where a plan proposed to pay off holding company debentures with an allocation of common stocks of operating companies owned by the holding company. See *Standard Gas and Electric Company*, 151 F. 2d 326, 333, note 12 (C. C. A. 3, 1945).

complicated because of the fact that Section 11 (b) compels simplification of holding company systems, and because the reorganization provisions of Section 11 are contained in the Act as a means of compliance with the requirements of Section 11 (b). In both the *Otis* case and the *Engineers* case the plan in question took the form of liquidation of a corporate entity found "necessary to comply with Section 11 (b)," and in both cases it was contended that the statutory mandate for liquidation matured the involuntary liquidation preference of the preferred stocks. The Commission held, however, that the form of compliance with the requirements of Section 11 could not have been intended by [fol. 64] Congress to affect the values to be received by the respective classes of security holders in view of the expressed interest of Congress that the reorganization provisions of Section 11 should not be permitted to shift values from one class of securities to another.[7] The Commission concluded therefore that "the process of compliance with the statute should not be permitted to mature liquidation preferences." 13 S. E. C. 1, 9. Referring to the analogy of bankruptcy reorganizations it stated: "In both instances the measure of participation allowed should compensate for the substantive rights of security holders as they would exist apart from the reorganization or other procedure in question," *ibid.* In other words, any shorthand description of the technique which the Commission has applied in this and other cases as valuation "*ex* the Act," is a misinterpretation unless understood with the interpolation: "*ex* [the present reorganization required by Section 11 (b) of] the Act."

C. The Commission's findings show that the Commission has measured the equitable equivalence of that which the common stockholders have surrendered and received

---

[7] While liquidation was found "necessary to comply with Section 11 (b)," liquidation of the corporate entity involved was only one of a variety of means of compliance, another recapitalization, for example, clearly would not mature the liquidation preference. As was stated in the Supreme Court's opinion in the *Otis* case, 323 U. S. 624 (at p. 631):

"The selection by the Commission of one method of system adjustment to accomplish simplification rather than another is an incident which ought not to affect rights."

through the plan according to the same technique used by the Commission in its valuation of the treatment of the preferred stockholders

The Court's opinion states that the Commission erred in not valuing the common stock of Engineers at all. We submit, however, that the Commission did value the common [fol. 65] stock in determining that it was being accorded its equitable equivalent and did so no more and no less "as the Act" than in the case of the preferred stock. The Commission's valuation merely assumes as a premise, the Euclidian axiom that the sum of the parts equals the whole. That axiom is applicable here unless the liquidation of Engineers resulted in a loss of values to the totality of interests affected. Applying the axiom, the Commission's appraisal of the treatment accorded preferred stockholders as the equivalent in cash of their preexisting interest necessarily involves valuation by the identical standard of the treatment accorded common stockholders.[8]

What the common stockholders surrendered by the plan was the residual value in Engineers subject to the preferred stockholders' prior claims. What the common stockholders received by the plan was the residual value in Engineers' assets after satisfying, at what the Commission found to be the fair value thereof, these prior claims.[9] Expressed in other [fol. 66] terms, the plan results in collective action by the common stockholders (or their transferees) to buy and retire the preferred stockholders' prior claims against the assets of Engineers and the value taken away from the preferred stockholders in removing their prior claim against Engi-

[8] With reference to the redemption price as a ceiling the Commission did use the phrase "apart from the Act" (R. 67a). Since common stockholders could retire the preferred without resorting to the reorganization provision of the Act, they were given the benefit of the call price as imposing that limitation on the preferred stockholder's claim most beneficial to the common. This is the only reference in the Commission's Engineer's opinion to the "or the Act" concept.

[9] We note below that the rule of absolute priority permits no alternative to limiting the common stockholders to what is left after satisfying the preferred stockholders' prior claim.

neers' earnings and assets, is necessarily transferred to the common stockholders in added value to their residual holdings.[10]

The Commission's opinion deals explicitly with the fairness of the plan to common stockholders and finds that, by reason of economic value added in the reorganization process, the common stockholders were substantially better off as a result of the plan than before. Thus, the Commission found that "elimination of this prior charge is highly beneficial to the common," in view of idle cash and in view of the hastening of the day when the common will begin receiving dividend income (R. 69a).[11]

[fol. 67] Neither this Court nor the District Court has held that the Commission erred in approving the method of reorganization chosen by the Engineers management whereby they elected to pay off the preferred stockholders in cash rather than on the basis of an allocation of Engi-

---

[10] As a matter of mechanics the cash surrendered by and on behalf of the common stockholders is in part by distribution of Engineers' cash on hand and in part by any cash received from the sale of Engineers' holdings in Gulf States Utilities Company to Engineers' common stockholders. For the further convenience of Engineers' common stockholders they were given transferrable warrants which could be sold on the market if they did not elect to make the cash contribution.

[11] It was conceded by the Engineers' management throughout—and not disputed by appellees when they subsequently appeared and objected, that the plan was advantageous to Engineers' common stockholders whether or not it should be held necessary to pay the preferred stockholders amounts equal to the redemption prices. It was merely contended that any amount in excess of the liquidation preference was more than preferred stockholders were entitled to receive. It was stated by management witnesses when Engineer's management was supporting their earlier proposal to pay preferred stockholders only the liquidation preference that the management had decided to pay off the preferred stockholders in cash rather than to present a plan proposing an allocation of assets among the preferred and common stockholders because it was desired to preserve underlying companies for the common stock (R. 719a, 723a, 807a).

neers' assets, and no spokesman for the common stockholders has made any such contention. We believe, however, that it would be anomalous to sustain the Commission in its approval of a program for discharge of the preferred stockholders' obligation in cash but to reverse it for not applying techniques of valuation required in allocation plans. Such plans necessarily reduce to the same level, for the purpose of paying off with different amounts of the same class of new securities, claims which were not theretofore of the same rank. This problem does not arise at all where the prior claimant is satisfied by cash, or by a new prior ranking security, found to compensate fairly for the claim surrendered and where the junior security holder retains, under the plan as before, the residual value in the enterprise.

We submit, therefore, that to require a remand merely for the purpose of a Commission finding that what the common stockholders receive in the plan is at least equal [fol. 68] to what they give up in the plan, is to require a statement in different terms of what the Commission has already found. Delay in complying with such a requirement would impose an added burden of expense upon the common stockholders whose rights the Court seeks to safeguard, since the common stockholders bear the costs of maintaining the escrow funds, regardless of whether the preferred or common stockholders ultimately prevail in this litigation.[12]

D. Contrary to the statements in the Court's opinion (p. 26) the Commission did give substantial consideration in its valuations to the future earning power of Engineers and its subsidiaries

The opinion of the Court criticizes the Commission's valuation as inconsistent with its own professions and the principles enunciated in the *Otis* case and reorganization decisions generally, because it did not consider the future earning power of Engineers and its subsidiaries. The witnesses before the Commission and the Commission itself had to, and did, consider the future earning power of the

[12] The escrow fund is not invested, but is held by the escrow agent in cash. Thus, the common will receive no interest or return on any fund to which it is ultimately found entitled.

Engineers system in determining the investment value of the preferred stock, since such a determination involves a consideration of the earnings coverage of that stock in the light of the accompanying risk factors. That the underlying forecast of future earnings was not dwelt on to a greater extent in the Commission's opinion was attributable to the absence of any controversy on the proposition that the prospective future earnings of Engineers substantially [fol. 69] exceeded the preferential dividend claims and that the risk factor was such that in the absence of the call privilege the stock would have an investment value substantially in excess of the call price.[13]

The criticism of the Commission on this score would thus seem understandable only in terms of a requirement that the Commission place an over-all valuation on the enterprise for the purpose of determining the value of the common stock or directly value the common stock and the assets to be received for it. This criticism of the Commission, therefore, is, in actuality, identical to that to which we have already addressed ourselves, to wit, that it should have placed a dollar valuation on the residual claims of the common stockholders for the purpose of ensuring their receipt of an equitable equivalence. As we have already pointed out, the technique employed by the Commission ensured that the common stockholders, by paying off the preferred stock in cash at an amount found to be no greater than the minimum investment value of the preferred stock, would receive greater values as a result of the plan than they previously had enjoyed. The placing of a dollar value on the enterprise through capitalization of future earnings could at most be only a check on this conclusion and a check of a far more speculative nature than

[13] The past earnings record reviewed in the Commission's findings shows the substantial basis for this forecast (R. 63-65). It will be noted that the recently available 12 months earnings figures showed a two times coverage on a corporate basis of the dividend requirement and on a consolidated basis a 1.6 times coverage of the aggregate requirements for fixed charges and preferred dividends of subsidiaries and for the holding company preferred. Cf. Group of Institutional Investors *v.* Chicago, M., St. P. & P. R. Co., 318 U. S. 523, 529.

[fol. 70] the processes sought to be checked.[14] The fact that allocation plans, such as that involved in the *Otis* case, do not afford the opportunity of applying the relatively certain technique applied to Engineers but require an attempt to express in dollar figures the uncertainties of the future, is not a virtue but, as the Commission and the courts have recognized, a necessary defect.[15] It would seem to be highly unfortunate to import this defect into a situation in which, for the reasons stated, it is wholly unnecessary.

[fol. 71] II

The Court's mandate requires clarification as to the choice of techniques available to the Commission in this case.

The mandate does not clearly specify whether the Commission is required in this case to value the assets of Engi-

---

[14] Both the *Consolidated Rock Products* case, cited by this Court in its Engineers opinion, and the opinion of this Court in the Otis case expressly recognize that the valuation process as conventionally applied in reorganizations does not depend upon forecast of earnings standing alone, but upon earnings forecast combined with the application of an appropriate discount rate designed to compensate for the degree of uncertainty in the particular case whether the forecast earnings are likely to be realized. See 312 U. S. 510, 525; 142 F. 2d 411, 420.

[15] Valuation of the residual interest in a holding company pyramid is attendant upon unusual uncertainty because of the leverage factor, and in the *United Light and Power* case the uncertainty was recognized by the Commission, as this Court noted, thru the application of the extraordinarily high discount rate of 15.2% to the estimates used. See 142 F. 2d 411, 421. The dissenting Commissioner and the dissenting Justices thought the valuation too attenuated to warrant any participation. Cf. Chief Justice Stone's dissenting comment:

"Peering into the future with almost clairvoyant percipience the Commission prophesied that if the company now being liquidated and dissolved were allowed to continue its operations it would, 15 years hence, have paid all arrears of dividends on the preferred and would then be able to pay an estimated annual return on the common stock in excess of $2,500,000." 323 U. S. 624, 642.

neers upon an actual or as if basis. While this Court has stated that the Commission has a choice of techniques and may make its valuation either "*intra* the Act" or "*ex* the Act" (p. 29), the opinion is not explicit as to what would constitute a valuation "*intra* the Act." Nor is it made explicit whether both techniques are deemed available in the present case. If the statement that the Commission may make its valuation "*intra* the Act" means that the Commission may treat the liquidation preference as dispositive, we cannot reconcile this statement with the holding earlier in the opinion that under the *Otis* case the liquidation preference is not dispositive, unless the holding is merely that there are cases other than the present one where it is permissible to treat the liquidation preference as dispositive.[16] That interpretation would leave as the sole problem, how the Commission is expected to value Engineers' stocks "*ex* the Act." If, on the other hand, it is intended that the Commission shall remain free to elect in this very case [fol. 72] between valuing "*ex* the Act" or "*intra* the Act," and valuation "ex the *Act*" means valuation predicated upon an as if reconstitution of the assets of Engineers, then, as we show below, the impossibility of making such a valuation makes the choice illusory. The Commission would be constrained to treat the liquidation preference as dispositive, which, as we state above, would appear to be in direct contradiction of the *Otis* case.

III

To require the Commission to ascertain and compute the alleged losses to Engineers through the operation of the Act would be both fruitless and impossible of achievement

A. The opinion states that after calculation "such losses should be returned to the credit side of the enterprise's

---

[16] As noted in our main brief, the Commission has treated the face amount of a debt or the liquidation preference of a preferred stock as a sufficient measure of fair and equitable treatment for discharging the claim through payment in cash in the absence of indication that such an amount would be disproportionate to the value of the interest which is paid off under the plan, computing that value apart from the plan; i.e., "*ex* the Act."

balance sheet as a matter of bookkeeping." But unless the Commission is required to shift the incidence of losses from common to preferred stockholders, adding back losses to the enterprise would be of no avail. Valuation of the preferred stockholders' prior claims in relation to the hypothetically swollen assets would merely strengthen the case for appraising their investment values *ex* the plan as at least equal to the redemption prices.

If the Commission were to add back the losses for the benefit of the common stockholders (which would not be returning the losses to the balance sheet of the enterprise), and to measure what common stockholders received through the plan in relation to what they might be thought to have lost by the over-all operations of the Holding Company Act, we submit that the Commission would be acting in direct [fol. 73] conflict with the holding of the Supreme Court in the Otis case that:

> Like the bankruptcy and reorganization statutes, the Public Utility Holding Company Act, in providing that plans for simplification be "fair and equitable," incorporates the principle of full priority in the treatment to be accorded various classes of security interests. This right to priority in assets which exists between creditors and stockholders exists also between various classes of stockholders. 323 U. S. 624, 634.

Thus, whether the Commission directs its attention first to the claims of the preferred or to those of the common against the totality to be distributed, the principle of full priority requires that the Commission take into account, *before* determining how much may be given or paid to the common stockholders, the amount fairly due to the preferred stock. Thus adding back the assumed losses can have no effect whatever but of reinforcing the fairness of giving the preferred stockholders an amount equal to the redemption price ceiling.

B. Reference has already been made in general terms to the impossible administrative task of computing whether the over-all application of the Act has resulted in loss or benefits to Engineer's common stockholders in actions antedating the plan. This Court's opinion suggests the desirability of making use of hindsight to improve upon past decisions based, as the Court notes, upon necessarily

inadequate foresight. Our difficulty with this suggestion [fol. 74] is that, short of eternity, one is nearly always concerned with foresight in determining whether a shift from one investment position to another will ultimately turn out advantageous or disadvantageous, while the passage of time soon makes it impossible to trace the consequences of any single step among the multiplicity of causal factors which are operative. Take for example the Puget reorganization.

In its opinion this Court refers to the 1946 and 1947 net profits of Puget of $5,325,320 and $5,067,410, respectively, as indicative of a loss to Engineers, presumably because these profits are in excess of the estimate of future earnings which formed the basis of the allocation of common stock in the Puget recapitalization of 1943, when Engineers gave up a 99.3 percent interest in common stock in exchange for a 3 percent interest in the common stock of the recapitalized company, thus losing some of the leverage which would cause increased earnings to benefit Engineers.

Apart from the difficulty of attempting to re-examine the fairness of this allocation, we believe the reference to the 1946 and 1947 earnings vastly over-simplifies the problem of proof.

As of September 30, 1942, the time of the Puget hearings, the prior preference and preferred stock of Puget had accumulated arrearages totalling $18,580,705. These accumulated and still mounting arrearages made it apparent that, for some time in the future, the holdings of Engineers in Puget, which consisted solely of common stock, would receive no return. Calculated on the basis of [fol. 75] *average* earnings of $2,657,000 per year (and assuming dividends equal to 100% of such earnings) it would take 34.1 years to discharge these arrearages, and on the basis of *average* earnings of $3,083,000 it would take 18.4 years. Accordingly, Engineers was given a small participation in the recapitalized company only because of the speculative character of its holdings.

The Commission's forecast of *average* earnings, which expressly envisaged peaks and valleys would not necessarily be subject to modification on the basis of a hindsight glimpse at the 1946 and 1947 earnings figures judicially noticed by the court even if those figures were otherwise comparable. Secondly, the Commission's figure

is based upon a depreciation allowance of between $600,000 and $1,000,000 more than that which the company used in its financial statement.[17] Finally, the recent statement by Puget's President that the 1947 gross income figure would probably be $1,000,000 less in 1948 than it was in 1947[18] should be considered in projecting future earnings as of today.[19]

Even if a present day evaluation of Puget's earnings should lead to a different long term forecast of average earnings, the figure so obtained would not measure the profit or loss suffered by the common stockholders of [fol. 76] Engineers as a result of the divestment of Puget from the Engineers system. It would still be necessary to trace the probable course of Puget's development under the aegis of the Engineers' management and undo the actions taken by that management as a result of the compulsions of the Act. Thus, one of the Puget subsidiaries, Independent Stages, is under orders of divestment pursuant to the antitrust laws. What effect this divestment, independent of the Holding Company Act, should have on the system should, of course, be considered in attempting to reconstitute the Engineers' interest in Puget. Moreover, Puget has divested another transportation subsidiary, the North Coast Transportation Company, after it ceased to be subject to the Act. This sale hardly has been compelled by the Act, but it might be difficult to eliminate the Act as a causal factor, since it sets a pattern for electric utility companies abandoning unrelated transportation properties.

In addition, it appears probable that good business management would have compelled, at some time, the recapitalization of Puget, and there is some possibility that the small interest Engineers could command in such

---

[17] Puget takes, for income tax purposes, a depreciation allowance $1,400,000 higher than that which it used to compute the figure which this Court used.

[18] Moody's Public Utility Manual, Suppl. Vol. 19, p. 1442.

[19] The Commission, in its allocation, also recognized that "a combination of favorable contingencies might in fact result in higher future earnings," and provided for this factor. *Puget Sound Power & Light Co.*, 13 S. E. C. 226, 247 (1943).

recapitalized company might have been sold aside from the compulsions of the Act. As an alternative, Engineers might have been persuaded to make a substantial new investment in equity securities of Puget and it would be necessary to estimate the return from that investment as against other possible uses of Engineers' funds.

Again, if it be assumed that the divestment of Puget was the result of Holding Company Act pressure, it would [fol. 77] be necessary, if the effect of the Act upon the holding company system is to be calculated, to determine the effect of the withdrawal of the $770,000 which Engineers received from the sale of Puget from Engineers' general funds. These funds, including proceeds of other sales and retained earnings,[20] generally, were used to increase Engineers' investment in El Paso and Virginia and to make payments to the preferred stocks of Engineers. It would also be necessary to recompute Engineers' taxes without reference to the tax advantages derived from the sale of Puget.[21]

Finally, at the time of the Puget sale, and since then, there has been an ever present possibility that Puget electric properties might be sold either to the Bonneville administration or to public utility districts in the State of Washington, or that they might be acquired by con-

---

[20] The published financial statements of Puget indicate that its working capital, which was approximately $980,000 on December 31, 1943, showed a deficit of $1,465,000 on December 31, 1947. This factor, plus the inadequate depreciation allowances being made and the reduced earnings forecast may lead to a need for additional financing in the near future. An attempt to recompute the consequences of the Puget reorganization would have to appraise this prospect also and any resulting dilution in the per share earnings attributable to the former Engineers' holdings—or in the alternative, the cost to Engineers in supplying the necessary capital itself.

[21] See Securities and Exchange Commission brief, p. 34. See also the reference to the Virginia Public Service Company acquisition, ibid., p. 35. That the over-all impact has not hurt Engineers common is inferable from its thirty-fold increase in market value since the Act (R. 63 (a), n. 45, 1361 (a)).

demnation by public bodies existing under the laws of the [fol. 78] State of Washington, and that the condemnation award would not leave any value for Engineers' common stock interest in Puget. To the extent that this involves appraising a local political hazard the appraisal would have to take into account possible local hostility toward absentee holding company management. The effect of the Act upon these possibilities and the likelihood that in its absence such sales or condemnations would occur would also have to be determined in any attempt to reconstitute and value the Puget holdings of Engineers.

This entire process, time consuming and well nigh impossible when only one of the holdings of Engineers is considered, would have to be repeated in the case of each of the properties held by Engineers. Each order of the Commission would have to be examined with all of these factors in mind and each company would have to be valued according to a somewhat similar procedure. When it is remembered that the Commission issued 22 separate orders which substantially affected the financial condition of Engineers [22] and that the system, as late as 1940, consisted of 8 direct subsidiaries, a service company, and numerous subsidiaries of subsidiaries, the magnitude of the task becomes apparent. Indeed, in view of the number of variables which would be present in such a computation we believe such a task, even if accomplished, would have little utility wholly aside from the question of its relevance to the problem of determining equitable equivalence.

When the Commission had to decide whether individual transactions proposed by the Engineers' management [fol. 79] were "detrimental to the interest of investors" (apart from questions arising under other applicable statutory standards), it was not its function to prophesy whether the transactions proposed would prove more advantageous than other alternative courses open to Engineers, but merely with whether, taking into account possibilities of gain as well as risks of loss, there was anything fundamentally unfair in the management's proposals. Appraisal of such transactions by the Commission becomes futile and meaningless, however, unless upon the execution of the approved transactions there is to be finality in the shift of risks which the individual transactions presuppose,

[22] See Appendix A for a list of these orders.

i. e., profits or losses therefrom are to accrue to security holders in accordance with their contracts. If resulting gains or losses are to be reallocated from the vantage point of hindsight at a future date, the consequence would be comparable to a rule which permitted reformation of insurance contracts after the risk has been run—either letting the insurance company off in the event of a casualty covered by the policy because of disproportion between the premium paid and the amount of the contract liability, or if no loss has occurred enabling the insured to recover his premium because he does not appear to have benefited. To require a retroactive reallocation of risks as between Engineers' preferred and common stockholders would be subject to the further criticism of unfairness because reallocation appears to be a technique which applies only for the benefit of the common stockholders.

[fol. 80] For that reason we believe that insofar as the opinion directs the Commission to reexamine executed transactions with a view to reallocating from the vantage point of hindsight either losses or profits attributable to such transactions, the mandate amounts to collateral attack upon decisions which the Congress intended to be final unless set aside upon timely review.[23] Even in the case of timely challenge to Commission action, Congress has been solicitous to protect those acting in good faith. *Cf.* Section 20 (d), providing: "No provision of this title imposing any liability shall apply to any act done or omitted in good faith in conformity with any rule, regulation, or order of the Commission, notwithstanding that such rule, regulation, or order may, after such act or omission, be amended or rescinded or be determined by judicial or other authority to be invalid for any reason."

IV

The statement that the Section 11 (e) enforcement court may take new evidence is contrary to the universal practice and to a long line of decisions under the Act, and opens up avenues of delay which could seriously impede the Administration of the Act.

---

[23] In the case of Puget there would be collateral attack also upon the holdings of the United States District Court for the District of Massachusetts, which approved and enforced the Puget plan.

With respect to the taking of new evidence the opinion contains three separate though related statements: (1) Where "the record furnished by the Commission has grown 'stale' for any reason the court may remand."; (2) If it [fol. 81] appears that "cogent evidence has not been submitted to the SEC" the court may remand for reconsideration; (3) The court may "receive evidence *aliunde* the Commission's record * * * and decide upon the new evidence and that contained in the Commission's record that the plan is unfair and remand * * * for further consideration."

We agree, of course, that the enforcement court could remand to the Commission under the circumstances suggested by the first of the above propositions, since that is no more than the standard which Section 24 (a) of the Holding Company Act lays down where an order of the Commission is before a circuit court of appeals upon direct review, e. g., where " it is shown to the satisfaction of the court that such evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceedings before the Commission."

Without urging that the requirements of Section 24 (a) are necessarily to be read into Section 11 (e), we submit that the second and third of the above statements, unless very narrowly construed, would lead to a complete undermining of the Congressional direction for administrative hearings on plans and would place burdens on the enforcement courts which could not conscientiously be discharged without causing great delay.

The Commission itself has emphasized the independent responsibility upon the enforcement court to satisfy itself as to the fairness of a plan even in the absence of objection, and has supported the right of persons who did not appear [fol. 82] before the Commission to voice objections before the District Court.[24] But we submit that, whether or not the

---

[24] In the Otis case the Commission supported the standing of Otis & Co. to be heard before the District Court and to appeal. There, however, objections were limited to the issue squarely raised by the dissenting opinion and were based upon the administrative record. Similarly in this case we have not challenged the standing of Engineers' common stockholders to object in the District Court, and to partici-

substantial evidence rule applies, objectors should be limited to pointing out insufficiencies on the face of the Commission's record, or points which they or their class could not reasonably have raised before the Commission. Otherwise, the statutory provision for hearings before both Commission and Court would furnish a field day for obstructionists without genuine benefit to investors at large.

It should be noted that the District Court at the time of hearing on a Section 11 (e) plan is in a position which makes it difficult to rule upon proffers of proof to supplement the administrative record. The administrative record in a reorganization proceeding is usually a voluminous one and it would be unreasonable to expect the District Judge to have become sufficiently familiar with the administrative record, prior to the opening of court hearings, to put him in a position to determine how far proffered evidence is merely cumulative upon a point already adequately covered before the Commission. If objectors are excused from participating in the administrative hearings, and are not limited [fol. 83] to the administrative record, they will be encouraged to dispense with even familiarizing themselves with the administrative record before making their proffers of proof in the District Court.

Under such pressures the District Court would be compelled to receive evidence of dubious value because it may then appear to have some bearing upon the issues presented by the plan, subject to later evaluation after a study of the administrative record. Proponents of the plan in turn would be compelled to offer answering testimony however duplicatory and the tendency would be to relegate the administrative record to the background.

The only alternative would be to reserve a ruling on a proffer of proof until consideration of all the other points concerning the merits of the plan and after the District Court has had a chance to examine its significance in relation to what is already in the administrative record.[25] This

---

pate as appellees insofar as they merely carry on a position which the Engineers management had fully developed before the Commission.

[25] In instances where a petitioner for review under Section 24 (a) has moved the reviewing court for leave to adduce additional evidence, the Court has deferred ruling on the motion until hearing the case on the merits, and in each

would be at the risk of requiring a reopening of the factual hearing in the District Court, if the proffered evidence is [fol. 84] found to be "cogent" even though not considered to relate to a matter which would necessarily control the Court's decision.

The third of the above propositions suggests that the Court, on the basis of evidence not before the Commission, might actually "*decide* * * * that the plan is unfair," and remand, presumably with the Court's ruling binding upon the Commission. While the opinion goes on to say that the court would then remand the case "for further consideration", we do not understand that the Commission could be free to consider more than what modification of the plan would conform to the Court's decision.[26]

---

instance the Court was then convinced that the new evidence sought to be adduced was not sufficiently pertinent to require the case to go back to the Commission. See *Public Service of Oklahoma* v. *Securities and Exchange Commission*, unreported, No. 2229 (C. C. A. 10, Jan. 17, 1941); *Central and South West Utilities Co.* v. *Securities and Exchange Commission*, 136 F. 2d 273 (App. D. C., 1943). We believe that these rulings, relatively early in the administration of the Act, have served to discourage the filing of such motions merely for the purpose of delay.

[26] The *decision* in the present case rests upon consideration of new evidence only to the extent that there has been consideration on the basis of judicial notice, of a matter concerning which the Commission rejected Engineers' proffer of proof. But this Court has upheld the District Court's rejection of the plan, as we understand it, only because the Court disagrees with the Commission's valuation technique. As previously indicated, we do not construe the mandate as a definitive ruling that payment to preferred stockholders of the amounts which the Commission found fair and equitable may not ultimately be upheld if supported by a proper valuation. But the statement which we are here discussing in the text is susceptible of the construction that the District Court could actually make a *decision* of disapproval which would be binding upon the Commission on remand, on the basis of evidence which the Commission never had an opportunity to consider in the first instance.

We mention the foregoing consideration as illustrative of the difficulty of attempting to deal with the problem of new evidence without having a concrete case before the Court. The statements are in any event contrary to the established practice in Section 11 (e) enforcement proceedings, [fol. 85] and, we believe, contrary to rulings of the Supreme Court in analogous cases.

As was said by the Supreme Court respecting an equity suit before a three-judge district court to enjoin the enforcement of a rate order of the Secretary of Agriculture—

> "A proceeding under § 316 of the Packers and Stockyards Act is a judicial review, not a trial de novo. The validity of an order of the Secretary, like that of an order of the Interstate Commerce Commission, must be determined upon the record of the proceedings before him—save as there may be an exception of issues presenting claims of constitutional right, a matter which need not be considered or decided now. On all other issues his findings must be accepted by the court as conclusive, if the evidence before him was legally sufficient to sustain them and there was no irregularity in the proceeding. To allow his findings to be attacked or supported in court by new evidence would substitute the court for the administrative tribunal as the rate making body."[27]

The problem of the introduction of evidence in a Section 11 (e) enforcement court first arose in *In re Jacksonville Gas Co.*, 46 F. Supp. 852 (D. Fla. 1942), one of the earliest of the Section 11 (e) cases. In an oral ruling from the bench, Judge Strum barred the taking of new evidence; and, in doing so, enunciated certain practical considera- [fol. 86] tions which have been deemed equally persuasive

---

[27] *Tagg Bros.* v. *United States*, 280 U. S. 420, 443-44 (1930). See also *Manufacturers Railway Company* v. *United States*, 246 U. S. 457, 488-490 (1918) (action to invalidate an I. C. C. rate order); *Cf. Reconstruction Finance Corporation* v. *Bankers Trust Company*, 318 U. S. 163, 168-70 (1943) (allowance of fees under Section 77 of the Bankruptcy Act).

by the other district judges who have considered the problem. Judge Strum stated:

> . . . what we are trying here really is a plan submitted by the Commission, and I think we ought to try that plan on the record before the Commission. I do not think it is appropriate, and I could see how it could lead to all sorts of complications and difficulties if we took the plan and tried it in part here on the record before the Commission, and in part upon evidence adduced de novo at this trial; evidence which had never been before the Commission. I do not think it would be appropriate to test the plan of the Commission in that manner by weighing facts and evidence which the Commission had never had; but which there had been an opportunity to produce before the Commission.
>
> . . . . . .
>
> Now, I am of the opinion, however, if it is proposed and provided, any testimony of sufficient weight and import to convince and satisfy the Court that it ought to be considered upon the fairness and equitableness of this plan, that it is the duty of this Court, and I think this Court would refer this case back to the Commission for consideration of that evidence, and then after the Court of original instance, so to speak, had considered it, had sent it back here for this statutory review. So, if counsel considers the proposed evidence of such import that it ought to be considered by the Commission, I will hear you on that question for the [fol. 87] purpose of determining whether the case should be remanded and referred with the suggestion that this evidence be considered. But I will sustain the objection to its introduction here now, de novo, and without the Commission ever having had the benefit of it.

As previously stated, the district courts have uniformly followed this rule in Section 11 (e) enforcement proceedings.[28] For cases in which the issue was made the subject

[28] In *In re United Gas Corporation*, 58 F. Supp. 501, aff'd 162 F. 2d 409 (C. C. A. 3, 1947); and in *In re Electric Bond and Share Company*, 73 F. Supp. 426, aff'd 161 F. 2d 978

of a specific ruling, see *In re Laclede Gas Light Company*, 57 F. Supp. 997 (E. D. Mo., 144), *aff'd sub nom. Massachusetts Mut. Life Ins. Co.* v. *S. E. C.*, 151 F. 2d 424 (C. C. A. 8, 1945), *cert. denied* 327 U. S. 796; *In re Electric Bond and Share Co.*, 73 F. Supp. 426, 443 (S. D. N. Y., 1946), *aff'd* 161 F. 2d 978 (C. C. A. 2, 1947). A holding to the same effect is implied in the First Circuit rulings in Section 11 (e) cases that the determination of the Commission should be sustained if supported by substantial evidence. *Lahti* v. *New England Power Association*, 160 F. 2d 845, 850 (C. C. A. 1, 1947); *In re New England Public Service Co.*, 73 F. Supp. 452, 456 (D. Maine, 1947). The substantial evidence rule was also applied by the Circuit Court of Appeals for [fol. 88] the Eighth Circuit in its affirmance of the *Laclede Gas Light Company case*, supra. See 151 F. 2d at 430.

Conclusion
